30. The combination in a machine of the class described of a movably mounted tool, means including a cylinder and piston for moving said tool axially with respect to the work, means for constantly supplying low pressure air to said cylinder at one side of said piston to retract said tool and to hold it normally in its retracted position, means for admitting air at a higher pressure to said cylinder at the other side of said piston to move said tool through a working stroke against the action of said low pressure air in said cylinder, means for exhausting said last-mentioned air pressure from said cylinder at the end of said working stroke, and means including an electric circuit for starting and determining the length of said working stroke.

Claim 31 differs from claim 30 in the recitation of "said higher pressure air being adapted to be further compressed upon the retardation of said tool when it is in engagement with the work, and additional means for retarding the movement of the tool at the end of said working stroke." Claim 32 differs from claim 31 in that it recites the means for adjusting the length of the working stroke. Claim 33 differs from claim 30 only by the addition of "means for adjusting the rate of flow of said higher pressure air to said cylinder and the rate of said exhaust therefrom." Claim 34 differs from claim 30 in that it provides for "means for adjusting the pressures of the air supplied to opposite sides of said piston, and means for adjusting the rate of flow of said higher air pressure." Those two clauses take the place of the last clause of claim 30. Claim 38 adds to claim 30 "means for adjusting the length of said working stroke and for determining the point at which said additional retarding means is actuated." Claim 39 adds to claim 30 "means for starting said forward stroke, and means for automatically insuring the continuance of said forward stroke after it has been started." Claim 40 differs from claim 39 in that it refers specifically to the switches for the continuance of the forward stroke recited in the last clause of claim 39.

Claims 50 and 51 were rejected as unpatentable over the Leland or the Schwartz patents. They read as follows:

50. A work holder for use in a machine having a tool which is movable axially through forward and reverse strokes comprising, a support for a work piece having means for guiding the work piece to a definite position therein, an electric switch adapted to be connected in an operating circuit of said tool and having an operating member adapted to be actuated by said work piece when said work piece is moved to said position, and means for actuating said operating member to eject said work piece from said groove.

51. A work holder for use in a machine having a tool which is movable axially through forward and reverse strokes comprising, relatively movable members adapted to grip a work piece, fluid pressure operated means for effecting said relative movement, one of said members having means for positioning said work piece, a switch adapted to be connected in an operating circuit of said tool and including an operating member adapted to be actuated by said work piece when said work piece is moved to said position, and means for actuating said operating member to eject said work piece when it is released by said relatively movable members.

The Board of Appeals properly pointed out that claim 5 does not show that the means for moving the tool axially in forward and reverse strokes is "compressed air operated" and without such limitation the claim reads directly upon the apparatus of the Schwartz patent except for its last clause which requires a holding circuit to short circuit the switch which is actuated during the first part of the forward stroke. It is clear that the Kingsbury device discloses such holding circuit designed for use in a tool advancing mechanism. The circuit and the shunt or holding circuits are illustrated and clearly described in the Kingsbury patent. Even though in the patent the shunt switch is manually operated, it was proper, contrary to the contention of appellant, to cite that patent as was done by the tribunals below. The operation, which is performed by the switch in the Kingsbury device, is the same operation which takes place in appellant's device when his foot pedal operated switch is depressed to initiate the movement of the tool. We do not think it would involve invention to use the holding circuit disclosed in the Kingsbury patent in the structure of the Schwartz device. The elements of the Schwartz structure discussed by the tribunals below are not questioned by appellant, and there is nothing in the reasons of appeal contending that the Kingsbury device does not disclose a holding circuit. It seems to us that it would be obvious to anyone skilled in the technical art here involved without the exercise of invention to apply the holding circuit of the Kingsbury device to the structure of the Schwartz patent. Since claims 6, 7, 20, 21, and 24 in their slight differences from claim 25 can not render those claims patentable, we agree with the Patent Office tribunals that the rejection of that group on the patent to Schwartz taken with the patent to Kingsbury was proper.

[1] We agree with the holding of the Board that the only feature of claim 25 which differentiates it from the disclosure of the Schwartz patent appears in the phrases "means for supplying low pressure air continually to said first named means for retracting said tool holder" and "means for supply-

ing air at a higher pressure to said first named means for moving said tool holder through a working stroke against the pressure of said low pressure air." The Johnson patent, 2,133,170, clearly discloses a pneumatic motor designed to operate in the same manner as the motor in the involved application. The piston in the cylinder of the Johnson device is brought into operation, as has been heretofore noted, by intermittently applied high pressure air to the lower end of the cylinder in which the piston operates as against the low pressure air maintained in the upper end of the cylinder. It is clear that when the pressure at the lower end of the Johnson device is released that the piston will be reversed in its action because of the force of low pressure air exerted against its upper end. We believe it would be obvious to one skilled in the art to substitute the pneumatic motor of the Johnson device for the Schwartz motor to move the tool of the Schwartz device. [2] Appellant contends in his brief that the Schwartz device does not show solenoid operated valves as referred to in claim 25. We find nothing in the record, however, that such matter was called to the attention of the Board of Appeals, and there is no specific assignment of error with respect thereto. As it was not called to the attention of the Board, obviously there was no error in failing to consider it. *In re Davis*, 26 CCPA (Patents) 1249, 103 F.2d 922, 41 USPQ 674, 507 O. G. 1032. We do not see that claims 26 and 27 distinguish patentably over the limitations of claim 25, and, therefore, we approve the decision of the Board in rejecting that group as unpatentable over the Schwartz patent in view of the patent to Johnson, 2,133,170. Certainly, merely changing the type of motor power would be obvious to one skilled in the art. *In re Gregory et al.*, 27 CCPA (Patents) 1345, 112 F.2d 838, 46 USPQ 40, 521 O. G. 277.

[3] The basic reference relied upon in the rejection of claims 28 and 29 is the patent to Schwartz. That patent appears to disclose every element contained in claim 28 except the foot pedal switch and the means for altering the circuit recited after defining the foot pedal switch. The Morgan patent discloses a foot pedal switch designed to control the apparatus through electrical circuits. It seems to us that it would not involve invention to add to the Schwartz machine the foot pedal switch of the Morgan device. We see no invention involved by the mere addition of another or manual control to the machine of the Schwartz patent and a switch whereby that control may be shifted from the work actuated control to a manual or pedal operated control. Appellant states in his brief that the foot pedal of the Morgan device is not a switch. The patent to Schwartz shows an electrical switch and the only question presented with respect to claim 28 is whether the providing of a foot pedal switch involves invention. [4] Clearly it is common knowledge of which we may take judicial notice that for many years past foot operated electrical switches have been used on automobiles, switching the headlights from a low to a high beam and back again. The foot operated electrical switch to close the circuit of an electrical starting motor in an automobile is also well and commonly known.

[5] Claim 29 adds to claim 28 as hereinbefore noted a still further control which may be substituted for one of the other controls when so desired by the operator, but it appears to us that such third control is disclosed in the patent to Johnson, 2,111,784. In the patent structure a switch is provided so that the operator may, when he wishes to do so, cause the machine to operate automatically, independent of the other controls. No one of the three controls can operate when one control is in operation and the assembling of several controls, each of which separably is known to be old in the prior art, with a switch for manual operation connecting any one of them into the machine, does not involve invention.

[6] The Board of Appeals fully agreed with the reasoning of the Primary Examiner rejecting claims 30 to 34 inclusive and 38 to 40 inclusive on the patent to Balcker or the patent to Anderson in view of the patent to Johnson, 2,133,170. A machine is disclosed in the patent to Anderson in which there is a movable mounted tool and means including a cylinder and piston for moving the tool axially with respect to the work. The piston operates in one direction through the force of compressed air and in the other direction by the expansion of a spring which has been compressed on the former stroke by the compressed air. In the electric circuit for starting and determining the length of the working stroke, there is a solenoid together with other members. In our opinion it would not require invention for one skilled in the art to substitute for the cylinder and piston assembly of the Anderson structure, the cylinder and piston assembly disclosed in the Johnson patent, 2,133,170. In that assembly means are shown for keeping a constant supply of low pressure air in the cylinder on one end of the piston, thus holding it normally in retracted position, and means for supplying the high pressure air on the other end of the piston in order to move the tool through its working stroke against the action of the low pressure air. The additional means disclosed in the Johnson patent, 2,133,170, for retarding the movement of the tool at the end of the working stroke comprises a plug entering into a recess in the upper part of the cylinder. We agree with the holding of the Board that there is no invention in supplying the Anderson device with means for adjusting the work stroke for the reason that such means is clearly disclosed in the Balcker patent. Neither is there any invention in providing a holding circuit for the electric circuit shown in the Anderson device. We agree with the Board in its holding that "No invention is involved in applying a holding circuit to any electric control circuit." With respect to claim 40, the holding circuit is not set out as being actuated by tool movement. It is merely stated that it is actuated "upon the movement" of the tool and certainly any holding circuit is inherently actuated after the starting circuit has been closed.

It is true, as pointed out by appellant, that the patentee Balcker discloses no means for moving the tool as required by claims 30 to 34 inclusive and 38 to 40 inclusive, by reason of the absence of constantly applied air pressure. That pressure, however, is present in the structure of the Johnson patent, 2,133,170, and even though the elements of the Johnson device, as contended by appellant, "could not be substituted bodily in either Balcker or Anderson," nevertheless in the last analysis it is merely substituting one motor for another which we think is clearly within the skill of the art. It may be true, as urged by appellant, that, with respect to claim 30, the Balcker structure does not in its "stop" provide for any adjustment corresponding to certain nuts of appellant. However, claim 30 does not call for adjustment by nuts, and it is clear to us that the stop of the Balcker device is a means for "determining the length of the stroke." That is all that is required in claim 30.

[7] Claim 32 recites means for adjusting the length of the stroke. A stop is shown in the Balcker device which, even if it does not imply adjustment, we think that invention would not be involved in merely making such element adjustable. *In re Brandt*, 20 CCPA (Patents) 1005, 64 F.2d 693, 17 USPQ 295, 432 O. G. 753. However, three other collars are disclosed in the Balcker patent similar to the stop, and it is clear that those collars are adjustable on their supports. Appellant contends that in claim 33 the means for adjusting the rate of air flow shown there is not disclosed in the prior art. Since no reason of appeal alleges error on the part of the Patent Office tribunals in that respect, it will not be considered. *In re Davis*, supra. Appellant makes the same contention in his discussion of claim 34. He states that "None of the references relied upon discloses anything corresponding to the pressure regulators" in that claim, and for that reason claim 34 should be allowed. There is nothing in the record to indicate that such contention was called to the attention of the Board. *In re Davis*, supra. Since we have hereinbefore held that in our opinion it does not involve invention to apply a holding circuit to any electric control circuit, it is not necessary to discuss appellant's contention in connection with claim 39 that only the Kingsbury patent has been cited disclosing any such feature, which disclosure of the patent, appellant contends, would cause inoperativeness when applied to the Schwartz device. In addition to our holding above mentioned with respect to the holding circuit, the patent to Johnson, 2,133,170, discloses such a circuit through a coil after the push button which starts the switch has been pushed to a closed position. The holding circuit may be clearly seen in the drawings of the Johnson device. Any difference between the holding circuit there and that of appellant's structure is merely functional, but since in this case patentable distinctions must rest on structure and not function, in our opinion such circuit of appellant is not patentable in view of that disclosed in the Johnson patent. The Johnson device, with respect to the holding circuit, clearly discloses circuit elements employed for maintaining the starting circuit which is closed after the push button is released. Therefore, we can not agree with appellant's contention.

Of course it is true, as pointed out by appellant with respect to claim 40, that the references do not show contacts which are actuated by movement of the tool to provide for a continuation of the forward stroke. The Board did not hold to the contrary. It pointed out that the claim does not require that the holding circuit is to be actuated by the movement of the tool, but "only upon the movement of the tool." That quoted expression can have reference to nothing except time. In other words, the time when the circuit would be actuated. Surely when any holding circuit is used in connection with a starting circuit or initiating a tool movement, such movement takes place when the starting circuit is closed and not by the movement of the tool.

Claims 50 and 51 are drawn to a specific form of work ejecting means. The work piece contact member in the Schwartz device and in the Leland device is spring urged and obviously will have a tendency to eject the work piece, as shown in appellant's structure and defined by those claims. The ejecting effect of the spring is necessarily governed by its strength in relation to the weight of the work piece to be affected. Therefore, the ejection means recited in claims 50 and 51 can not lend patentable distinction to claims 50 and 51 over the prior art.

[8] We have given careful consideration to the voluminous and carefully prepared brief of appellant, but are compelled to conclude that the rejection of the involved claims by the tribunals below was proper, and, therefore, the decision appealed from must be affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE HORVITZ

No. 5465. Decided June 1, 1948

[168 F.2d 522; 78 USPQ 79]

1. PRACTICE—EXAMINER'S INTERPRETATION OF CLAIM INTER PARTES NOT BINDING ON BOARD OF APPEALS. Where in an interference involving an application of appellant filed later than the presently involved application, appellant moved to shift the burden of proof, basing such motion in part upon the disclosure of the presently involved application, and where in his decision on the motion, the Examiner interpreted the count in such manner as to hold that it was not supportable by the disclosure of the presently involved application, and appellant acquiesced in such interpretation and abandoned the contest; and where in the ex parte consideration of the claims of the presently involved application the Board of Appeals interpreted the count as though it did not contain the wording which was emphasized by the Examiner as his interpretation of the count, *Held* we can see no reason why the Examiner's decision in the interference has the effect of a final judgment or that it is of such form as to bind the Board of Appeals.

2. SAME—SAME.

Held that the acquiescence by appellant in the holding of the Examiner in the interference cannot preclude review of such question when the matter has been presented to the proper tribunals, and since appellant did not seek such review before the Board of Interference Examiners, the decision of the Board of Appeals in this proceeding is the first opportunity by a proper tribunal of the Patent Office to pass upon the meaning of the interference count in controversy.

3. CLAIMS—PROCESS—"COMPRISES."

It may be noted that the process recited in the claims "comprises" the recited operations in the claims. In patent parlance, the term "comprises" is inclusive.

4. INTERFERENCE—ABANDONMENT OF CONTEST—EFFECT THEREOF.

Held that in abandoning the contest, appellant in effect confessed judgment of priority of invention of the subject matter of the count thereof.

5. PATENTABILITY—METHOD OF EXPLORATION FOR OIL, GAS, ETC.

Certain claims to a method of exploration for oil, gas, and related deposits *Held* properly rejected as unpatentable over the issue of an interference in which appellant filed an abandonment of contest.

APPEAL from the Patent Office. Serial No. 263,750.

AFFIRMED.

Patrick J. Whelan (*J. G. McKean, Edward J. Mahler, W. F. Weigester,* and *Edwin M. Thomas* of counsel) for Horvitz.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

JACKSON, *J.:*

Appellant appeals from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting claims 17, 21, and 22 of an application, Serial No. 263,750, filed March 23, 1939, entitled "Exploration by Soil Analysis." The claims were rejected as being unpatentable over the issues of and on the ground of estoppel arising out of the abandonment of contests by the appellant in two interferences, Nos. 78,304 and 79,340. Ten claims were allowed.

Claim 17 appears to be illustrative of the subject matter and reads as follows:

17. A method of exploration for oil, gas, and related deposits which are subject to leakage of diffusible constituents therefrom, which comprises collecting soil samples near the surface at laterally spaced points over the area to be explored, extracting from each sample, with the same solvent and under comparable conditions, a petroleum derived wax-like substance soluble in carbon tetrachloride, and determining the relative amounts of such substance extracted from the respective samples whereby the amounts so determined for the several samples may be correlated with sample locations to yield data useful in locating the deposits sought for.

The application relates to geochemical prospecting of ground for the purpose of locating petroleum bearing deposits beneath the surface of the earth without drilling. Broadly speaking, such methods are in use, many of which include analyses of soil samples taken from spaced points over land which is being investigated for some constituent, the strength or concentration of which varies according to its proximity to an oil deposit. It is said that significant constituents may seep upwardly from an oil deposit or that they may be normal constituents of the soil where the concentration over an oil deposit varies. A comparison of the sample contents of the selected constituent extracted from the samples indicates the probable location in which to sink an oil well. The constituent recited by appellant is called "soil wax," which is said to be a wax-like substance, whose definite composition appears to be unknown. The samples are treated with an organic solvent, such as carbon tetrachloride, for the purpose of removing therefrom all of the soluble organic matter leaving the sought material, which is then treated with a mineral acid, such as hydrochloric acid, which it was originally considered would render the wax material soluble in solvents for organic material. After treatment with mineral acid, the substance is treated with an organic solvent, such as carbon tetrachloride, and results in a yellowish-orange waxy substance. After evaporation, the residue of the various samples is expressed in percent weight. The varying results are then plotted on a map and contours drawn in order to determine their differences on the ground which has been prospected. It is said that the wax, by suitable treatment, is separable into two components referred to by appellant and called α-wax and β-wax.

The patents relied on were involved with the present application in the interferences hereinbefore mentioned, and are as follows: Smith, 2,312,271, February 23, 1943; Dunn, 2,320,577, June 1, 1943.

The patent to Smith discloses a method of locating subterranean petroleum deposits. It comprises taking samples from the soil surface, treating the samples with a weak solution of hydrochloric acid, and then extracting the non-gaseous hydrocarbon contents by means of carbon tetrachloride as a solvent.

The Dunn patent relates to geochemical prospecting, particularly to a method thereof, which involves the sampling of soils and the determination in surface soils of waxes which, it has been found, are correlated with the presence of deep-seated petroleum deposits. The process discloses the obtaining of soil wax by direct extraction thereof from the samples with a solvent, preferably pentane and without the intermediate acid treatment of appellant's process. In the process of the patent the solvent is evaporated and determination of the amount of soil wax is made by weighing.

It appears that on January 8, 1938, appellant filed an application, Serial No. 183,959, for a patent, entitled, "Exploration by Soil Analysis." While that application was pending, on March 23, 1939, he filed the instant application, Serial No. 263,750, with the same title. On November 13, 1939, appellant filed a third application, Serial No. 304,139.

The present application of appellant was involved in an interference, No. 77,335, with the application of the Smith patent, hereinbefore mentioned. Appellant, who was the senior party, moved to dissolve the interference on the ground that the counts thereof were not supported by the Smith application. The motion was denied, and the party Smith subsequently abandoned the contest under rule 107 of the Rules of Practice, U. S. Patent Office. The interference was thereupon dissolved, as provided by that rule, and the counts thereof appear in appellant's here involved application as allowed claims 15 and 16.

The same Smith application was involved in interference No. 78,304, running concurrently with interference No. 77,335. In the former of those two interferences, there was also involved the application of the Dunn patent hereinbefore mentioned, and the last application of appellant, No. 304,139. In that interference, the senior party was Smith, the intermediate party was appellant, and the party Dunn was the junior party. During the motion period, appellant moved to shift the burden of proof, relying upon his application, No. 183,595, which was subsequently abandoned. The party Dunn filed a motion to dissolve the interference, a motion to amend under rule 109, and a motion to set up an interference between himself and appellant on commonly disclosed subject matter. Appellant's motion to shift was denied, as was the motion of the party Dunn to dissolve. The motion of Dunn to amend was granted as to one count and his motion to set up a separate interference, which became interference No. 79,340, was granted.

In denying appellant's motion to shift the burden of proof, the Examiner held that application No. 183,595 did not support the counts. In a subsequent decision on a request for reconsideration of appellant's motion, appellant's present application was considered. The Examiner denied that request in the following language:

Application 263,750 states "The substance sought as it exists in the soil is insoluble in common organic solvents" (page 4, lines 10–11). Even with the omission suggested by counsel, the required steps include a solubilizing leach with acid, and then extraction of the residue with the carbon tetrachloride type of solvent. The language of the count requires "extracting from said samples the solid—constituents which are soluble in carbon tetrachloride." The quoted language does not include the process disclosed in 263,750.

After another count had been added, responsive to the said motion of the party Dunn, in interference 78,304, appellant abandoned the contest. Thereupon the interference was dissolved so far as appellant was concerned, but continued between the other two parties and resulted in priority of invention of the two counts of that interference being awarded to the party Smith. Those became the two claims of the Smith patent.

The third interference, 79,340, which was set up in response to the motion of the party Dunn in interference No. 78,304, involved the party Dunn and appellant. That interference was dissolved upon the filing by appellant of a notice to abandon the contest and the count of that interference appears as claim 4 of the Dunn patent above noted.

Claim 1 of the Smith patent reads as follows:

1. In the art of geological exploration, the method of locating petroleum deposits which comprises systematically collecting a series of samples of surface soil at spaced locations, extracting from said samples the solid, petroleum derived constituents which are soluble in carbon tetrachloride, measuring the relative amounts of said constituents and tabulating said measurements with respect to the original location of the samples.

[1] It may be remembered that appellant abandoned the contest of interference No. 78,304 the counts of which became the claims of the Smith patent. The Examiner took the position that the claims on appeal are so similar to count 1, that appellant is in fact contending for subject matter as to which he abandoned the contest and in the opinion of the Examiner there was no material distinction between claim 1 of the Smith patent, above noted, and involved claim 17. The Board of Appeals agreed with that reasoning of the Primary Examiner.

When appealed claim 17 and claim 1 of the Smith patent are examined there can be no question that each defines steps of collecting samples of surface soil from spaced locations over the area being prospected; that both the appealed claim and the patent claim recite the step of extracting a petroleum derived constituent, soluble in carbon tetrachloride; that the amount of such constituent is determined; and that such amounts of the constituent as are derived from the samples are utilized to indicate the presence or absence of subterranean petroleum deposits.

It will be noticed that the involved claim 17 differs from the said patent claim 1 in that claim 17 recites the step of "extracting from each sample, with the same solvent, and under comparable conditions, a petroleum derived wax-like substance soluble in carbon tetrachloride." It is contended by appellant that such difference was interpreted by the Examiner in interference No. 78,304 with respect to count 1, hereinbefore quoted from, in such a way as not to be supported by the disclosure of the herein involved application.

Appellant's contention is that, because the language of claim 1, which when it appeared as an interference count, had been interpreted by the Examiner as not supportable by the disclosure of the involved application, the Board erred in interpreting such patent claim as though it did not contain the wording which was emphasized by the Examiner, hereinbefore quoted, as his interpretation of the count. It appears that the Primary Examiner, who denied appellant's motion to shift, is the same Examiner who denied patentability to the rejected claims herein. However, we can see no reason why his decision in interference No. 78,304 has the effect of a final judgment under circumstances such as are here shown, or that it is of such force as to bind the Board of Appeals.

[2] Appellant was not compelled to accept the construction given the count in the interference by the Examiner. The decision on the motion to shift the burden of proof does not necessarily conclude an interference proceeding in which the priority rights of the parties are determined. A review of such decision may be had at final hearing by the Board of Interference Examiners. The acquiescence by appellant in the holding of the Examiner in interference No. 78,304 can not, in our opinion, by any proper reasoning, preclude review of such question when the matter has been presented to the proper tribunal. Appellant did not seek such review before the Board of Interference Examiners and the decision of the Board of Appeals in this proceeding is the first opportunity by a proper tribunal

of the Patent Office to pass upon the meaning of the interference count in controversy, when such count appears as an allowed claim.

As is quite obvious, appellant in his involved application and the patentee Smith in his specification disclose the same process steps. Both, as was clearly stated by the Board, disclose a modification of the soil samples by an acid or like treatment prior to the extraction step. That statement has not been challenged by appellant. Therefore, it can not be held in view of such similarity, that claim 1 of the Smith patent excludes preliminary acid treatment.

In our opinion claim 1 of the Smith patent is broad enough to cover the process defined in claim 17. Certainly another patent for the same broad process can not be issued.

Appellant does not contend that rejected claim 17 can be considered patentable if the Board's interpretation of claim 1 of the Smith patent is proper. Such contention could not properly be made in that event because rejected claim 17 and claim 1 of the patent would be directed to an identical process.

[3] It may be noted that the process recited in claim 1 of the Smith patent "comprises" the recited operations in the claim. In patent parlance, the term "comprises" is inclusive. *In re Cone*, 28 CCPA (Patents) 1282, 121 F.2d 470, 50 USPQ 54, 533 O. G. 1050. Therefore, it necessarily follows that claim 1 properly covers a method which includes preliminary acid treatment as well as a process without such treatment.

It has not been contended that any of the rejected claims contain limitations which would render them patentably distinct from the other claims on appeal and since they all stand or fall together, there is no necessity for separate treatment of them.

[4] In abandoning the contest in interference 78,304, appellant in effect confessed judgment of priority of invention of the subject matter of the count thereof, which is claim 1 of the Smith patent. In view of what we have said herein, it is unnecessary to discuss interference No. 79,340.

[5] Since we are in thorough accord with the decision of the Board of Appeals, that the rejected claims are unpatentable over the issues of interference No. 78,304, it is unnecessary to discuss the ground of estoppel arising out of the abandonment of the contest in interferences 78,304 and 79,340.

For the reasons hereinbefore set out, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

NOTICES

Extension of Time for Renewing Trade-Mark Registrations: Czechoslovakia

By the President of the United States of America

A PROCLAMATION

WHEREAS by the act of Congress approved July 17, 1946, 60 Stat. 568, the President is authorized, under the conditions prescribed in that act, to grant an extension of time for the fulfillment of the conditions and formalities for the renewal of trade-mark registrations prescribed by section 12 of the act authorizing the registration of trade-marks used in commerce with foreign nations or among the several States or with Indian tribes, and to protect the same, approved February 20, 1905, as amended (15 U. S. C. 92), by nationals of countries which accord substantially equal treatment in this respect to citizens of the United States of America:

NOW, THEREFORE, I, HARRY S. TRUMAN, President of the United States of America, under and by virtue of the authority vested in me by the aforesaid act of July 17, 1946, do find and proclaim that with respect to trade-marks of nationals of Czechoslovakia registered in the United States Patent Office which have been subject to renewal on or after September 3, 1939, there has existed during several years since that date, because of conditions growing out of World War II, such disruption or suspension of facilities essential to compliance with the conditions and formalities prescribed with respect to renewal of such registrations by section 12 of the aforesaid act of February 20, 1905, as amended, as to bring such registrations within the terms of the aforesaid act of July 17, 1946; that Czechoslovakia accords substantially equal treatment in this respect to trade-mark proprietors who are citizens of the United States; and that accordingly the time within which compliance with conditions and formalities prescribed with respect to renewal of registrations under section 12 of the aforesaid act of February 20, 1905, as amended, may take place is hereby extended with respect to such registrations which expired after September 3, 1939, and before June 30, 1947, until and including December 31, 1948.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

DONE at the City of Washington this twenty-first day of August, in the year of our Lord nineteen hundred and forty-eight and of the Independence of the United States of America the one hundred and seventy-third.

[SEAL]

HARRY S. TRUMAN.

By the President:
G. C. MARSHALL,
Secretary of State.

Proclamation 2805—Aug. 21, 1948.

International Convention for the Protection of Industrial Property

Adherence of the Netherlands to the London 1934 Revision

The Secretary of State has been notified by the Legation of Switzerland of the adherence, effective August 5, 1948, of the Netherlands to the International Convention for the Protection of Industrial Property as last revised at London on June 2, 1934. This adherence includes the Netherlands Indies, Surinam and Curaçao.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

August 26, 1948.

Adjudicated Patent

(C. C. A. Conn.) Woodfine patent, No. 1,916,905, for margin regulator for typewriters, claims 1 to 3 *Held* infringed. *Royal Typewriter Co.* v. *Remington Rand Inc.*, 168 F.2d 691; 77 USPQ 294.

Disclaimers

2,047,131.—*Arthur L. Eiche*, Freeport, Ill. MULTIPORT PLATE TYPE VALVE. Patent dated July 7, 1936. Disclaimer filed Aug. 23, 1948, by the assignees, *Automatic Pump & Softener Corporation*, and *Lee G. Daniels.*

Hereby enter this disclaimer to claims 1, 2, 5, 7, and 8 of said patent.

2,376,200.—*Leonard Smidth*, New York, N. Y. PROCESS FOR TREATING FIBROUS MATERIALS AND PRODUCTS SO PRODUCED. Patent dated May 15, 1945. Disclaimer filed Aug. 20, 1948, by the patentee.

Hereby enters this disclaimer to claims 8 and 11 of said patent.

2,414,197.—*Ralph E. Gignoux*, Bakersfield, Calif. HYDRAULIC DRIVE FOR HOISTS OR THE LIKE. Patent dated Jan. 14, 1947. Disclaimer filed Aug. 18, 1948, by the inventor: the assignee, *Vickers Incorporated*, assenting.

Hereby enters this disclaimer to claims 2, 8, 9, 10, and 11.

Examination

In accordance with the provisions of Rule 17 of the Rules of Practice, an examination for the registration of attorneys and agents to practice before the United States Patent Office will be held on Monday, November 15, 1948.

This examination will be given under the direction of the Civil Service Commission, and may be taken in any of the cities of the country in which the Civil Service Commission regularly conducts examinations. Applications to take the examination must be directed to the Commissioner of Patents and filed in the Patent Office not later than October 20, 1948.

Application blanks may be obtained from the Clerk of the Committee on Enrollment, Room 1859, Department of Commerce Building.

THOMAS F. MURPHY,
Chairman, Committee on Enrollment.

August 16, 1948.

Cancellation Notice

Carl Cannon, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Handy & Harman, Inc., 82 Fulton St., New York 7, N. Y., to effect the cancellation of trade-mark registration of Carl Cannon, 6309 Yale Ave., Chicago, Ill., No. 256,286, dated May 14, 1929, and the notice of such proceeding sent by registered mail to the said Cannon at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Cannon, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

Aug. 10, 1948.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries. Executive Office of the President, Bureau of the Budget)

Pat. 2,436,613. AUTOMATIC CIGARETTE HOLDER. Patented Feb. 24, 1948. Tapered holder has the usual bit, enlarged cigarette-holding socket, and smoke passage. The socket, however, is slotted to provide a seat for a flexible, wedge-shaped clamping jaw pivotally seated in the slot of the socket. The jaw is slightly thicker than the socket wall and forms an imperfect circle which holds the cigarette firmly. When the lower end, or handle, of the jaw is depressed, the jaw is raised allowing the cigarette to be shaken from the holder. (Owner) Wilford P. Sinclair, Ryland, N. C. Groups 30—32; 39—96. Reg. No. 9,910.

Pat. 2,443,489. GRINDING TOOL. Patented June 15, 1948. This grinding tool for refacing valve seats is constructed to allow a cooling fluid such as oil or water to be introduced under pressure to the working face of the tool from a point adjacent the tool. The grinding wheel of the tool is flexibly joined to a rotary drive shaft so that it is coaxial with a pilot shaft. Communicating ways in the drive shaft, joint, wheel, and pilot shaft conduct fluid directly to the working face of the grinding wheel and to the outer face of the pilot shaft. This cooling fluid serves not only to wash away grindings, but to take up clearance to effect simple and accurate refacing of the valve seat. (Owner) Paul Weynand, 112 Kayton Ave., San Antonio 3, Tex. Group 35—43. Reg. No. 9,911.

Pat. 2,441,487. COLLAPSIBLE AUXILIARY GUNSTOCK. Patented May 11, 1948. A collapsible telescopically extensible attachment for a gunstock, arranged to swing on a pivot mounting into and out of a channel in the lateral face of the gunstock. Adjustable to the opposite shoulder from which the gun-butt rests to steady, support, and brace the gun while sighting. Operates as an additional absorbent of any kickback force of the gun during firing. (Owner) Herman Gordon Howard, 521 Majestic Bldg., Sixteenth at Broadway, Denver 2, Colo. Group 33—97. Reg. No. 9,912.

Pat. 2,442,950. REFUSE INCINERATOR WITH TIN CAN COMPARTMENT. Patented June 8, 1948. Incinerator has a central outlet and an interior divided into a combustion chamber and an ash pit by a series of alternately placed grates horizontally mounted one above the other over a gas burner. Spacing between bars, which compose the grates, diminishes toward the lowest grate. A separate tin can compartment is arranged in front of the combustion chamber just below a top opening. The grate of this latter compartment slopes toward the front so that tin cans may be discharged outside the incinerator housing. The construction ensures the complete combustion of garbage or trash as it falls from grate to grate. The same heat also renders the cans more easily destructible for later crushing. The incinerator shown is made of concrete. (Owner) Claude J. Harding, P. O. Box 1292, Plainview, Tex. Group 33—69. Reg. No. 9,913.

Pat. 2,322,329. FLARE. Patented June 22, 1943. This automatic flare for highway warnings is self-igniting when thrown or dropped. Flare material is held within a cardboard casing having a central tube, or core, perforated near the top, the perforations sealed by a band coated with a combustible material such as that found on ordinary friction matches. The casing rests on a spring seated in a weighted, self-righting base. The base has a stem which moves within the central tube, the stem carrying a gritty striker near the top which rubs the combustible surface and pushes a plug from the top of the tube when thrown. The flare, when dropped, bounces several times because of the spring, ensuring the frictional ignition of the flare material. A bail handle completes the structure. (Owner) Adrian G. Venn, 1065 Bergen St., Brooklyn, N. Y. Group 28—97. Reg. No. 9,914.

Pat. 1,923,499. AUTOMATIC TRAIN CONTROL. Patented Aug. 22, 1933. A remotely controlled automatic system for electric trains in which a semaphore gives appropriate signal depending upon the setting of a switch which controls the starting and stopping of the train. One of the main rails of the system has an insulated section. The wheel of train traveling on this rail is electrically connected with its axle, while the other wheel is insulated. Terminals of motor are connected, one to driving axle and the other to a power rail. A source of current is connected to the power rail and to the rail having the insulated section. Depending upon the action of a pair of solenoids, the core of a plunger associated with the solenoids moves the semaphore arm to the selected position and operates an electro-magnetic relay switch to start or stop the train. (Owner) William Naken, 1635 West Pratt Blvd., Chicago 26, Ill. Group 36—19. Reg. No. 9,915.

Pat. 2,443,596. RECIPROCATING BENDER WITH PIVOTED SIDE SHAPERS. Patented June 22, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) This apparatus is especially adapted for forming sheet material into stream-lined or tear-drop shaped pieces required for certain aircraft parts. A pair of female dies having quarter-circular inner surfaces are rotatably mounted in a U-shaped base. These dies cooperate with a substantially circular male die having a fitted ram. In the forming operation, a sponge rubber pad is placed between the workpiece and the male die, and a block inserted between the female dies before pressure is applied. The block is then removed, and more pressure applied. This causes the female dies to rock toward each other, bending the upper ends of the workpiece into contact with the sides of the ram. When withdrawn axially of the male die, a finished workpiece teardrop shaped in cross section results. (Owner) James E. Cahill, 312 Columbus Ave., Trenton 9, N. J. Group 35—43. Reg. No. 9,916.

Pat. 2,442,779. TELESCOPING POST. Patented June 8, 1948. Includes several pairs of inner and outer tubes with identical locking devices. A sleeve is mounted on each inner member and has an inwardly projecting shoulder and a loosely mounted cramping ring mounted within a collar above the shoulder. The collar has an upwardly extending pin to tilt the ring and cramp it on the inner member and prevent the inner tube from telescoping within

the outer tube. To permit the tubes to telescope, the sleeve of lowest inner tube is pushed upwardly toward a smaller tube straightening the cramping ring and permitting the two next tubes to telescope. (Owner) Joseph Oriold, 599 Spadina Ave., Toronto, Ontario, Canada. Group 39—39. Reg. No. 9,917.

Pat. 2,443,379. REFRIGERATING SYSTEM OF THE INERT GAS TYPE. Patented June 15, 1948. A refrigerating system having three continuous cycles involving the activity of ammonia, distilled water, and hydrogen gas. Heat is applied to the generator and expels ammonia vapor from the solution through the ammonia vapor chamber into the condenser, where the ammonia vapor is condensed to liquid. The liquid ammonia flows from the condenser to the evaporator and through a connection having two branches. One branch extends to an inert gas chamber, and the other to a water and ammonia solution tank. An inert gas return connection extends from the ammonia vapor chamber to the solution tank associated with a spiral absorber coil (one above and one below the solution tank) so that ammonia evaporates and diffuses into the hydrogen, producing a refrigerating effect in the refrigerator cabinet. (Owner) F. E. Dixon, 1819 West 70th St., Los Angeles, Calif. Group 35—84. Reg. No. 9,918.

Pat. 2,442,902. LATCH FOR MENU FRAMES. Patented June 8, 1948. A clip or latch for insertion through aligned openings in the upper end of a conventional 2-sheet frame between the sheets of which a menu is visible on each side. Latch consists of a small U-shaped flexible sheet cut at each end to form three fingers. The center fingers are overlapped, forming a cylindrical body which fits snugly within the aligned openings in the sheets of the frame. For insertion, the fingers at one side may be bent to the contour of the cylindrical body, but once in place, the side fingers are straight and engage the outer faces of the frame. (Owner) Thomas E. Moore, 501 Avenue I, S. E., Winter Haven, Fla. Groups 33—73; 39—81; 40. Reg. No. 9,919.

Pat. 2,443,571. PENCIL GRIPPER. Patented June 15, 1948. A finger grip and shank extender for use on an ordinary pencil. A hollow tube (preferably of plastic), tapering at one end and corrugated on outer side, provides a non-slipping finger grip. The interior of the tube has at least two portions having bores of different diameters, one large enough to admit a pencil. The smaller bore is near the tapering end. An annular right-angle shoulder is formed by the intersection of the base of a larger bore and the wall of a smaller bore. For use in extending pencil stubs, gripper is placed on the unsharpened end of pencil. For use as a gripper, the sharpened end of pencil is pushed through the larger bore of gripper until it is stopped by the right-angled shoulder, the point extending through and beyond the tapering end. A tight clamping action occurs at this interface. (Owner) George W. Wherry, 817 North Dearborn St., Chicago, Ill. Groups 39—52—81; 40. Reg. No. 9,920.

Pat. 2,160,769. RENOVATOR FOR NECKTIES. Patented May 30, 1939. A device for removing wrinkles from neckties. The renovator consists of an outer hinged casing which fits over a perforated metal form having an inner heating element and covered by a layer of asbestos or a like absorbent material. In use, the form is moistened and inserted within the necktie to be pressed, and the whole covered by the hinged outer casing. Heat passing through the perforations vaporizes the moisture so that the necktie is steamed. The round lateral edges of the device prevent sharp creases at the edges of the tie, while the steam restores the fresh appearance of the tie without damaging the fabric. Owner has model, mold, and dies. (Owner) David Weisberger, First National Bank Bldg., Scranton 3, Pa. Groups 35—81; 36—21; 40. Reg. No. 9,921.

Pat. 2,439,560. ANIMAL SNARE. Patented Apr. 13, 1948. This snare is especially adapted for trapping large animals so that the fur of the animal is not damaged. The snare is formed of a long flexible multi-strand cable having a lock at one end and an anchor at the other. The lock is tubular and outwardly flared at one end, provided with a V-notch and a pair of toothed edges. The cable extends loosely through the tubular portion and combines with the lock to form a noose. When the noose is tightened around the neck of animals caught in the snare, the noose tends to swing the lock in a clockwise direction, causing the serrated edges to bite into the cable. This effectively prevents slipping and resists movement in an opposite direction. (Owner) Robert S. Connor, Little Marais, Minn. Group 33—49. Reg. No. 9,922.

Pat. 2,436,899. CIRCULAR CUTTER. Patented Mar. 2, 1948. Attachment for a drill press or other standard machine tools for cutting circular sections from sheet material. The cutter is formed of a rib-reinforced upper plate and a slotted lower plate attached to the central shaft of a drill press. The plates are separated by four sectional walls which constitute a framework. The slots in the lower plate permit the travel of a series of four cutter units, each composed of a cutting disk rotatably mounted in a holder. The units may be separately adjusted to any diameter by a bolt threaded through each of the holders and supported by a wall segment and the central shaft. A single circular section may be quickly cut if all units are set to the same diameter, or, if a series of concentric circles or rings are desired, each of the disks may be set to a different diameter. (Owner) P. E. Rivest, 1025 King St., London, Ontario, Canada. Group 35—43. Reg. No. 9,923.

Pat. 2,444,491. CLOTHES WASHING IMPLEMENT. Patented July 6, 1948. A miniature washboard has a ribbed plate sized to fit against the palm of user's hand while washing small articles in a basin. A raised pocket at end of back of ribbed plate has finger holes for insertion of user's fingers, and a recess is provided at side for the thumb, so that the washboard may be held firmly. A box-like receptacle, open at one end, for soap, sewing accessories, etc., fits in the pocket when not in use. A cover envelops the open end of the receptacle and the end portion of the plate and locks the two together. May be made of plastic, light metal, or the like. (Owner) C. V. Berry, 3 Mount Morris Park, New York, N. Y. Groups 34—41; 35—81; 39—81; 40. Reg. No. 9,924.

Des. Pat. 149,970. DESIGN FOR AN ANDIRON. Patented June 15, 1948. Base portion of each andiron is surmounted by an upright in the form of a letter of the alphabet. (Owner) John W. Rehfuss, 1040 Washington Ave., Albany 3, N. Y. Group 33—59. Reg. No. 9,925.

The following patents are owned by Herbert E. Page, 2846 Westshire Drive, Hollywood 28, Calif.

Pat. 2,355,672. ELECTRIC SHAVER. Patented Aug. 15, 1944. Shaver has a perforated cylindrical outer cutting head mounted for free rotation so that it may be freely rolled over the skin during the shaving operation. A similar head nested within the outer head is independently driven by either a solenoid or an electric motor. Several embodiments are shown. In one, both heads are mounted for free rotation on a common shaft, with the inner head reciprocated within the outer head by the solenoid. In

others, the inner head is either oscillated or rotatably driven within the outer head by the motor. The heads may also be mounted either longitudinally or transversely at the front end of the body of the shaver. Group 33—51. Reg. No. 9,926.

Pat. 2,381,867. HAIR CLIPPER. Patented Aug. 14, 1945. Shaver is provided with a perforated flexible outer cylindrical cutting head mounted for free rotation so that it may be freely rolled over the skin during the shaving operation. A slightly smaller cylindrical cutting head is reciprocated within the outer head by an electric motor. The inner head may be formed with an eccentric bore whereby one portion of its cylindrical wall is thinner than the other. This thin portion is perforated to provide a cutting edge. The outer head is loosely held on the inner head so that normal shaving pressure on the outer head will urge it inwardly and maintain it in frictional contact with the cutting surface of the inner head. Modifications are shown. Group 33—51. Reg. No. 9,927.

Pat. 2,401,292. DRY SHAVER. Patented June 4, 1946. Shaver is provided with a perforated frusto-conical shaped outer cutting head mounted for free rotation so that it may be freely rolled over the skin during the shaving operation. A pair of elongated blades extending longitudinally within the outer head are pivoted at their inner ends to opposite ends of a cross bar, which is operatively connected to a motor disposed within the handle of the shaver. When the cross bar is rotated, the blades swing radially outwardly into frictional contact with the inner surface of the outer head. A modification is shown. Group 33—51. Reg. No. 9,928.

Pat. 2,418,722. DRY SHAVER. Patented Apr. 8, 1947. Shaver has a perforated cylindrical outer cutting head mounted for free rotation so that it may be freely rolled over the skin during the shaving operation. A similar cutting head nested within the outer head is independently rotated by a motor. Normally the outer head is restrained from revolving with the inner head by a fixed brake shoe on a post within the body of the shaver. The shoe engages a sleeve on which the outer head is mounted. As the outer head is pressed against the skin, both heads, the sleeve, and all operating parts including the motor, pivot as a unit with the sleeve moving away from the shoe, thereby releasing the outer head for free rotation. Group 33—51. Reg. No. 9,929.

Pat. 2,440,061. POWER-DRIVEN DRY SHAVER. Patented Apr. 20, 1948. Shaver has a perforated cylindrical outer cutting head mounted for free rotation so that it may be freely rolled over the skin during the shaving operation. A pair of perforated co-axial cylindrical cutting heads in end-to-end relation are nested within the outer head. The inner heads are rotated in opposite directions by a motor to prevent them from causing rotation of the outer head so that it remains stationary until pressed against and rolled over the skin. Group 33—51. Reg. No. 9,930.

Pat. 2,440,114. DRY SHAVER. Patented Apr. 20, 1948. Shaver has a perforated cylindrical outer cutting head mounted for free rotation so that it may be freely rolled over the skin during the shaving operation. A similar freely rotatable inner cutting head is axially reciprocated within the outer head by an electric motor. The inner head is smaller than the outer head and so mounted that springs urge it into eccentric relationship to the outer head to obtain light, resilient, frictional engagement between the heads at the cutting point only, thus minimizing drag. Group 33—51. Reg. No. 9,931.

Des. Pat. 147,807. DESIGN FOR A DRY SHAVER. Patented Nov. 4, 1947. Group 33—51. Reg. No. 9,932.

Pat. 2,129,866. TYPEWRITER MECHANISM. Patented Sept. 13, 1938. Typewriter having a normally idle motor may be manually operated as an ordinary machine without any power, or with any amount of power from minimum to maximum to supplement the force applied by typist. This permits a typist to quickly become accustomed to the machine by gradually increasing the power. To energize the motor, the machine may utilize two successively operated relays, and individual shields for each key for interrupting the light beam of a photo-electric cell. Slight depression of any key causes one relay to close a circuit and partially energize the motor without causing type heads to strike platen. Further depression of the key causes the second relay to close a circuit to supply stronger current to the motor for actuating the type heads. This delayed action feature gives the typist an opportunity to remove her finger from a key without type heads striking, should she slightly depress the wrong key. Modifications are shown. Group 35—72—79. Reg. No. 9,933.

Pat. 2,167,086. WASHING APPARATUS. Patented July 25, 1939. In this washing machine the agitator is oscillated during the washing operation and rotated at high speed during the drying or extracting operation. A clothes basket is mounted in a compartment containing washing fluid, and the agitator is suspended in the basket from above by a universal joint. During the washing operation the basket remains stationary, but during the drying operation the basket is clutched to the agitator so that both rotate as a unit. When the basket is clutched to the agitator, a valve is automatically opened to permit the washing fluid to drain into a lower compartment. A spring normally holds a clutch cone into engagement with a clutch pan to oscillate the agitator. When the clutch is disengaged, the agitator may be rotated at high speed. Manipulating a foot pedal controls operation of the machine. Group 35—81. Reg. No. 9,934.

Pat. 2,414,606. DRAFTING BOARD. Patented Jan. 21, 1947. A drawing may be held flat on this drafting board by vacuum and rotatably adjusted without being smeared. The base has a recess in which a circular body is rotatably mounted. A rectangular cavity in the top of the body is covered with perforated board to form a vacuum chamber in the body. Plungers in the base of board are utilized to create a vacuum in the cavity. After creation of the vacuum, the body may be freely rotated (or held in desired position) without disturbing the vacuum. Group 39—54. Reg. No. 9,935.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 14, 1948

[VOL. 614. NO. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

FOR LIQUID OR FINELY-DIVIDED SOLID ORGANIC CHEMICAL DETERGENT HAVING SURFACE ACTIVE, WETTING, AND EMULSIFYING PROPERTIES.
Claims use since Mar. 26, 1948.

CLASS 5

ADHESIVES

Ser. No. 531,286. ANGIER CORPORATION, Framingham, Mass. Filed Aug. 14, 1947.

SNAKE TAPE

The word "Tape" is disclaimed apart from the mark. Applicant claims ownership of registration No. 134,745.

FOR ADHESIVE-COATED, STRAND-REINFORCED PAPER TAPE PRIMARILY USED FOR WRAPPING AND PACKAGING.

Claims use since 1935.

Ser. No. 543,186. INDUSTRIAL TAPE CORPORATION, New Brunswick, N. J. Filed Dec. 3, 1947.

TEXCEL TAPE

No claim is made to the word "Tape" apart from the mark as shown. Applicant claims ownership of registrations Nos. 385,834, 417,602, 426,300, 428,860, and 432,554.

FOR PRESSURE-SENSITIVE ADHESIVE TAPE.

Claims use since Mar. 3, 1939.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 512,463. STAYNER CORPORATION, Berkeley, Calif. Filed Aug. 26, 1947. Under section 2f of the act of 1946.

Stayner

Applicant claims ownership of registration No. 397,032.

FOR VITAMIN PREPARATIONS—NAMELY, VITAMIN B COMPLEX; VITAMIN B COMPLEX WITH LIVER AND IRON; VITAMIN B COMPLEX WITH VITAMIN C AND LIVER; MIXTURES OF DICALCIUM PHOSPHATE, CALCIUM GLUCONATE AND VITAMIN D; VITAMIN A; VITAMINS A AND D; RIBOFLAVIN; PYRIDOXINE HYDROCHLORIDE; VITAMIN B IN EFFERVESCENT MIXTURE; VITAMIN D; MIXTURES OF VITAMINS A, B, D, AND G; MIXTURES OF VITAMINS A, B, D, G AND C; VITAMINS A, D, B-COMPLEX, C, CALCIUM PANTOTHENATE AND NIACINAMIDE; THIAMIN CHLORIDE; ASCORBIC ACID; WHEAT GERM OIL, VITAMIN E; VITAMIN E CONCENTRATE; HALIBUT LIVER OIL, PLAIN; HALIBUT LIVER OIL WITH VIOSTEROL; BREWERS' YEAST; YEAST AND IRON; AND DRIED BREWERS' TYPE YEAST; CHEMICALS AND PHARMACEUTICALS IN THE FORM OF OINTMENTS, ELIXIRS, AMPOULES, TABLETS AND CAPSULES—NAMELY, AMINOPHYLLIN; AMINOPHYLLIN AND PHENOBARBITAL; AMMONIUM CHLORIDE; ASPIRIN; ASPIRIN-ACETOPHENETIDIN-CAFFEIN TABLETS; BARBITAL; CALCIUM LACTATE; CALCIUM PANTOTHENATE; COLD FORMULA, COMPRISING ACETOPHENETIDIN, ATROPINE SULFATE, CAFFEINE CITRATE, CAMPHOR, PODOPHYLLIN, AND ALOIN; DICALCIUM PHOSPHATE, CALCIUM GLUCONATE AND VIOSTEROL WAFERS; EPHEDRINE SULFATE; ELIXIR TERPIN HYDRATE AND CODINE; MILK OF MAGNESIA; NIACIN; NIACINAMIDE; ACETOPHENETIDIN; PHENOBARBITAL; QUININE SULFATE; SACCHARIN; SODA MINT TABLETS; SODIUM BICARBONATE; SODIUM CHLORIDE; SODIUM PENTOBARBITAL; SODIUM SALICYLATE; MULTI MINERAL TABLETS; SULFANILAMIDE; SULFAPYRIDINE; SULFATHIAZOLE; THEOBROMINE AND PHENOBARBITAL; THIAMIN CHLORIDE; AND TINCTURE OF MERTHIOLATE; THYROID TABLETS; ACTIVELY EFFERVESCENT MIXTURES OF CITRATES AND CARBONATES; SALINE LAXATIVE; SODIUM PHOSPHATE; AND GRANULAR EFFERVESCENT SALTS MIXTURES; AND INSECTICIDES, PARTICULARLY A DUSTING POWDER CONTAINING 2-2-BIS(P-CHLOROPHENYL)-1,1,1-TRICHLORETHANE.

Claims use since Jan. 25, 1940.

Ser. No. 520,101. RALPH I. GUY, doing business as The Rig Company, Glendale, Calif. Filed Jan. 27, 1948.

RIGKO-SEE

No claim is made to the word "See" apart from the mark shown in the drawing.

FOR VITAMIN PREPARATION, IN TABLET FORM.

Claims use since July 12, 1946.

Ser. No. 524,487. SCHOLLER BROTHERS, INC., Philadelphia, Pa. Filed Aug. 18, 1947.

TRISCONIZE

Applicant claims ownership of registration No. 186,157.

FOR CHEMICALS FOR CONTROL OF CHLORINATION.

Claims use since Apr. 17, 1947.

Ser. No. 526,778. CHURCH & DWIGHT CO., INC., New York, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

CHURCH & DWIGHT CO. INC.

No claim is made to the words "Co." and "Inc." Applicant claims ownership of registrations Nos. 369,752, 369,753, 369,754, and 369,829.

FOR SAL SODA, WASHING SODA, MONOHYDRATED CARBONATE OF SODA, BAKING SODA, AND BICARBONATE OF SODA.

Claims use since 1896.

Ser. No. 527,430. TABLE ROCK LABORATORIES, INC., Greenville, S. C. Filed July 5, 1947.

NIBESOL

Applicant claims ownership of registration No. 403,846.

FOR TABLET FOR THE TREATMENT OF VITAMIN DEFICIENCIES, NEURITIS, MALNUTRITION, POLYNEURITIS AND VITAMIN B COMPLEX DEFICIENCIES.

Claims use since January 1943.

Ser. No. 527,630. VITAMINERALS, INC., Los Angeles, Calif. Filed July 5, 1947.

VITAMINERALS

Applicant claims ownership of registrations Nos. 301,529 and 393,059.

FOR ANALGESIC BALM, ANESTHETIC OINTMENT, ASTRINGENT PREPARATION, BENZOCAINE, BILE SALTS, BONE MEAL FOR USE AS A SOURCE OF CALCIUM AND PHOSPHORUS, CALCIUM PREPARATIONS, CHLOROPHYLL, COLLOIDAL SULPHUR, DIGESTIVE ENZYMES, ESTROGENS, EXTRACT OF OX BILE, GARLIC EXTRACTS, IODINE PREPARATIONS, IRON PREPARATIONS, IRON SULPHATE PREPARATIONS, KELP EXTRACTS, LAXATIVES, LIVER PREPARATIONS, MINERAL CONCENTRATE PREPARATIONS, MINERAL OINTMENTS, MINERAL RECTAL SUPPOSITORIES, MULTIPLE VITAMIN PREPARATIONS, PANCREATIN, PAPAIN, PHOSPHORUS PREPARATIONS, VITAMINS A, B-COMPLEX, C, D, E, F AND K.

Claims use since Aug. 1, 1933.

Ser. No. 531,996. MARY DI GIOVANNI, doing business as Royal Kings Row Products, Brooklyn, N. Y. Filed Aug. 21, 1947.

Siren Song

FOR CLEANSING CREAM.

Claims use since July 23, 1947.

Ser. No. 532,225. RICHARD HUDNUT, New York, N. Y. Filed Aug. 23, 1947.

FROZEN CHAMPAGNE

FOR COLOGNE.

Claims use since July 15, 1947.

Ser. No. 532,226. RICHARD HUDNUT, New York, N. Y. Filed Aug. 23, 1947.

GRAND GESTURE

FOR COLOGNE.

Claims use since July 15, 1947.

Ser. No. 534,592. BAXTER LABORATORIES, INC., Glenview, Ill. Filed Sept. 16, 1947.

PYROMEN

FOR INJECTABLE PYROGEN.

Claims use since Sept. 11, 1947.

Ser. No. 535,061. MEDICINE FOR CHILDREN, INCORPORATED, San Francisco, Calif. Filed Sept. 19, 1947.

Children's Aide

The word "Children" is disclaimed apart from the mark as shown.

FOR NOSE DROPS, ANTIPYRETIC TABLETS, VAPOR INHALANT, COUGH MEDICINE, LAXATIVE TABLETS, CHEST RUB, SKIN LOTION, ASPIRIN, ANTISEPTIC SOLUTION, LAXATIVE COMPOUND, COLD TABLETS, LAXATIVES, AND SOLUTIONS FOR PREVENTING THUMB SUCKING BY CHILDREN.

Claims use since Feb. 1, 1947.

Ser. No. 539,405. WILLIAM S. FORMAN, doing business as W. S. Forman Co., Chicago, Ill. Filed Oct. 29, 1947.

MADABEAU

FOR PERFUME, HAIR TONIC, SHAMPOO, AND AFTER SHAVE LOTION.

Claims use since August 1943 on perfume; and since January 1946 on hair tonic, shampoo, and after shave lotion.

Ser. No. 539,922. THE VOWEL COMPANY, St. Louis, Mo. Filed Nov. 1, 1947.

PET-A-POO

The word "Pet" is disclaimed apart from the mark.

FOR DOG SHAMPOO.

Claims use since June 16, 1947.

Ser. No. 540,418. INTERNATIONAL MINERALS & CHEMICAL CORPORATION, Chicago, Ill. Filed Nov. 7, 1947.

MULTIFOS

FOR DEFLUORINATED PHOSPHATE FOR USE AS PLANT AND ANIMAL FOOD SUPPLEMENTS.
Claims use since Sept. 26, 1947.

Ser. No. 540,653. EUGENE, LTD., Brooklyn, N. Y. Filed Nov. 10, 1947.

BLEUGÈNE

Applicant claims ownership of registrations Nos. 200,352 and 242,284.
FOR HAIR TINT FOR WHITE AND GRAY HAIR.
Claims use since 1924.

Ser. No. 541,004. LUXANA, S. A., Barcelona, Spain. Filed Nov. 13, 1947.

CZARDA

Applicant claims ownership of Spanish registration 142,385, dated Sept. 22, 1945.
FOR COSMETIC AND BEAUTY PREPARATIONS—NAMELY, FACE POWDER, FACE CREAM, FOUNDATION CREAM, FOUNDATION LOTION, PERFUME, COLOGNE, TOILET WATER, CREAM ROUGE, ROUGE COMPACTS, LIPSTICKS, SKIN TONIC, CLEANSING CREAM, HAND LOTION, HAND CREAM, EYE LOTION, EYE CREAM, EYE SHADOW, NIGHT CREAM, THROAT CREAM, BATH OILS, DUSTING POWDER, BATH SALTS, BODY LOTION, BODY CREAM, SUNTAN LOTION, AND SUNTAN CREAM.
Claims use since Mar. 31, 1943.

Ser. No. 541,612. THE URBANA LABORATORIES, Urbana, Ill. Filed Nov. 18, 1947. Under section 2f of the act of 1946.

Mor-les-nitrate

No claim is made to the word "Nitrate" apart from the mark. Applicant claims ownership of registration No. 357,630.
FOR SOIL TESTING CHEMICALS FOR DETERMINING NITRATE-NITROGEN CONTENT OF SOILS.
Claims use since Feb. 23, 1935.

Ser. No. 541,869. MONARCH SOAP & CHEMICAL CO., Minneapolis, Minn. Filed Nov. 20, 1947.

Sep-ko
WETTING COMPOUND

No claim is made to the words "Wetting Compound" apart from the mark.
FOR WETTING AGENT TO BE ADDED TO WATER FOR USE IN REMOVING SCUM, MILK STONE, WATER SCALE, CALCIUM, MAGNESIUM, AND OTHER HARD ELEMENTS IN THE WATER FROM DAIRY PROCESSING EQUIPMENT.
Claims use since Aug. 1, 1947.

Ser. No. 543,146. DELAWARE VALLEY CHEMICALS, INC., Easton, Pa. Filed Dec. 3, 1947.

Del-Kem

FOR HAND CREAM.
Claims use since Nov. 3, 1947.

Ser. No. 544,837. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Dec. 19, 1947.

TAGATHEN

FOR ANTI HISTAMINIC PREPARATIONS FOR THE PREVENTION AND TREATMENT OF ALLERGIES.
Claims use since Dec. 10, 1947.

Ser. No. 547,464. WILFRED H. LANGE, doing business as M. Lange Beauty Products, Rochester, N. Y. Filed Jan. 19, 1948.

Fess ★ Up

FOR SHAMPOO.
Claims use since Jan. 8, 1948.

Ser. No. 548,432. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Jan. 30, 1948.

Ileogastrone

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF PEPTIC ULCERS.
Claims use since Nov. 7, 1947.

Ser No. 548,698. R. J. STRASENBURGH COMPANY, Rochester, N. Y. Filed Feb. 3, 1948.

METROCIN

FOR MEDICINAL PREPARATION IN TABLET FORM FOR TREATMENT OF PEPTIC ULCER.
Claims use since Nov. 25, 1947.

Ser. No. 548,805. HENRI COUTINHO, doing business as The Sintos Co., New York, N. Y. Filed Feb. 5, 1948.

SINTOS

FOR COUGH SYRUP.
Claims use since Jan. 22, 1948.

Ser. No. 549,142. FELLER-JONES CORPORATION, New York, N. Y. Filed Feb. 9, 1948.

MOTH-PANIC

The word "Moth" is disclaimed apart from the mark.
FOR MOTH PROOFING FLUID.
Claims use since Jan. 27, 1948.

Ser. No. 549,151. J. M. F. CHEMICAL COMPANY, Bryan, Tex. Filed Feb. 9, 1948.

King-O-Cide

FOR HERBICIDES.
Claims use since Jan. 21, 1948.

Ser. No. 549,421. GEORGE D. COLEMAN, Aberdeen, Miss. Filed Feb. 11, 1948.

AR-NE-SA

FOR PREPARATIONS FOR THE HAIR AND SCALP—NAMELY, POMADE FOR CLEANSING AND DRESSING THE HAIR, CURLING WAX, HAIR GLOSS, BRILLIANTINE, AND PRESSING OIL.
Claims use since Jan. 24, 1948.

Ser. No. 550,641. AIRKEM, INC., New York, N. Y. Filed Feb. 27, 1948.

DYPERKEM

FOR DIAPER ODOR COUNTERACTANT.
Claims use since Jan. 16, 1948.

Ser. No. 551,461. INTERSTATE SALES CO., Waco, Tex. Filed Mar. 8, 1948.

FOR SACHET CREAM.
Claims use since July 15, 1945.

Ser. No. 551,513. JOHN SIDNEY BRAZIER, doing business as Brazier's Laboratory, Donaldsonville, La. Filed Mar. 9, 1948.

BATEX

The drawing is lined to represent red color.
FOR PREPARATION FOR THE RELIEF OF RHEUMATISM, ARTHRITIS AND NEURALGIA.
Claims use since January 1947.

Ser. No. 551,576. NORGINE LABORATORIES, INC., New York, N. Y. Filed Mar. 9, 1948.

ENZYPAN

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF INDIGESTION.
Claims use since May 14, 1923.

Ser. No. 551,694. S. E. COVER, Andrews, N. C. Filed Mar. 11, 1948.

VOX-A-DO

FOR PREPARATION FOR THE TREATMENT OF ATHLETE'S FOOT, AND ITCHING TOES.
Claims use since Feb. 18, 1948.

Ser. No. 551,764. BURRELL-DUGGER COMPANY, Indianapolis, Ind. Filed Mar. 12, 1948.

BU-DU

FOR POULTRY WORMING COMPOUND.
Claims use since Sept. 16, 1947.

Ser. No. 551,816. THE PHARMA-CRAFT CORPORATION, New York, N. Y. Filed Mar. 12, 1948.

ERATOL

FOR MEDICATED OINTMENT.
Claims use since Feb. 20, 1948.

Ser. No. 552,104. ALTONE CHEMICAL COMPANY, INC., New Orleans, La. Filed Mar. 17, 1948.

PRO-PHY-TOL

Applicant claims ownership of registrations Nos. 73,653 and 50,394.
FOR ANTISEPTIC MOUTH WASH, ALSO USED AS A GENERAL ANTISEPTIC IN THE PREVENTION OF COLDS AND SORE THROATS, FOR TREATMENT OF TIRED OR TENDER FEET, AND FOR MINOR CUTS, ABRASIONS, SCRATCHES, AND MOSQUITO BITES.
Claims use since Apr. 1, 1905.

Ser. No. 552,248. EDITH LAWRENCE, doing business as The Lawrence Company, Laguna Beach, Calif. Filed Mar. 18, 1948.

Strictly Tailored

FOR PERFUMES.
Claims use since Mar. 4, 1948.

Ser. No. 552,303. XTERMINATOR PRODUCTS CORPORATION, Jersey City, N. J. Filed Mar. 18, 1948.

Voo-Doo White Magic

FOR INSECTICIDE.
Claims use since Sept. 10, 1947.

Ser. No. 552,443. EATON LABORATORIES INC., Norwich, N. Y. Filed Mar. 19, 1948.

Aspogen

Applicant claims ownership of registration No. 236,398.
FOR ANTACID PREPARATIONS.
Claims use since Jan. 26, 1948.

Ser. No. 554,332. SHELL OIL COMPANY, INCORPORATED, San Francisco, Calif. Filed Apr. 10, 1948.

Nicona

Applicant claims ownership of registration No. 250,316.
FOR INSECTICIDES USED AS GARDEN AND ORCHARD SPRAYS.
Claims use since Mar. 19, 1928.

CLASS 7

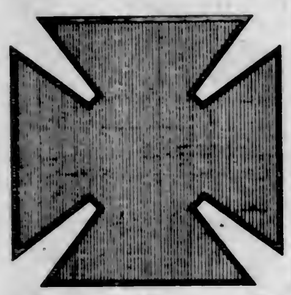
CORDAGE

Ser. No. 519,179. CHARLES C. DAVIS AND COMPANY, Chicago, Ill. Filed Nov. 7, 1947.

SCOUT

FOR TWINES, STRING, SASH CORD, AND CLOTHES LINE.
Claims use since May 20, 1927.

CLASS 12



CONSTRUCTION MATERIALS

Ser. No. 536,263. MALVERN BRICK AND TILE COMPANY, Malvern, Ark. Filed Sept. 30, 1947.

MABCO

FOR FIRE BRICK.
Claims use since Nov. 29, 1941.

Ser. No. 537,295. DEWEY PORTLAND CEMENT COMPANY, Kansas City, Mo. Filed Oct. 9, 1947.

The drawing is lined to indicate the colors red and blue. Applicant claims ownership of registrations Nos. 290,413, 292,161, 299,338, and 351,473.
FOR PORTLAND CEMENT AND MASONS CEMENT.
Claims use since Feb. 16, 1931.

Ser. No. 537,489. THE TREMCO MANUFACTURING COMPANY, Cleveland, Ohio. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

BLACAULK

Applicant claims ownership of registration No. 407,138.
FOR MASTIC COMPOUND FOR CAULKING, GLAZING, POINTING AND LIKE PURPOSES.
Claims use since May 1, 1928.

CLASS 13

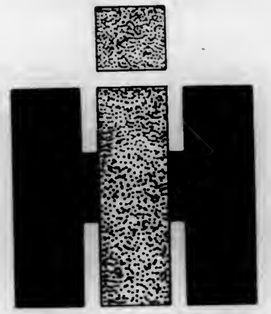
HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 517,447. W. D. ALLEN MANUFACTURING CO., Chicago, Ill. Filed Aug. 28, 1947.

"BULLDOG"

Applicant claims ownership of registration No. 60,349.
FOR SEPARABLE HOSE COUPLINGS, AND HOSE MENDERS, THE LATTER IN THE NATURE OF INSEPARABLE COUPLINGS, FOR GARDEN AND OTHER HOSE.
Claims use since 1927.

Ser. No. 519,383. EDWARD VALVES, INC., East Chicago, Ind. Filed July 24, 1947.



Impactor

FOR VALVE STEM OPERATING MECHANISM FOR FLUID CONTROL VALVES.
Claims use since May 23, 1938.

CLASS 15

OILS AND GREASES

Ser. No. 504,618. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill. Filed July 12, 1947.

The stippling on the drawing is for shading only.
FOR LUBRICATING OIL FOR MACHINERY.
Claims use since Apr. 24, 1946.

Ser. No. 522,009. ILLINOIS FARM SUPPLY COMPANY, Chicago, Ill. Filed Jan. 6, 1948.

ILLINI

FOR MOTOR LUBRICATING OIL.
Claims use since Apr. 1, 1946.

Ser. No. 534,460. THE OHIO OIL COMPANY, Findlay, Ohio. Filed Sept. 13, 1947.

Applicant claims ownership of registration No. 361,794.
FOR LUBRICATING OILS AND GREASES.
Claims use since Nov. 23, 1937.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 499,461. THE AMERICAN VARNISH COMPANY, Chicago, Ill. Filed Oct. 6, 1947. Under section 2f of the act of 1946.

Applicant disclaims any right to the exclusive use of each of the following apart from the mark as a whole: "The," "Varnish," "Co.," "Est.," and "1883."
FOR VARNISHES; READY-MIXED, DRY, AND PASTE PAINTS; OIL AND VARNISH STAINS; LACQUERS; PAINT ENAMELS; POLISHING WAX; FURNITURE POLISH; SIZINGS, PRIMERS, SEALERS, UNDERCOATINGS AND FILLERS IN THE NATURE OF PAINTS OR FOR USE IN CONNECTION WITH PAINTS, VARNISHES, ETC.; AND COLORS IN OIL.
Claims use since 1889 on varnishes; and since 1917 on other items.

Ser. No. 514,930. ATLAS POWDER COMPANY, Wilmington, Del. Filed July 19, 1947.

ZAFLO

Applicant claims ownership of registration No. 422,794.
FOR LACQUERS; VARNISHES; PAINT ENAMELS; AND COMPOSITIONS CONTAINING CELLULOSE ESTERS AND/OR ETHERS, RESINS AND/OR PLASTICIZERS, SOLVENTS, AND PIGMENTS FOR CONTROLLING LUSTER AND COLOR, IN THE NATURE OF A PAINT FOR LACQUERING AND ENAMELING; AND THINNERS THEREFOR.
Claims use since Oct. 30, 1946.

Ser. No. 529,322. VELSICOL CORPORATION, Chicago, Ill. Filed July 23, 1947.

VELSICOL

Applicant claims ownership of registrations Nos. 425,674, 425,676, 299,564, 299,670, and 435,038.
Claims use since April 1937.

Ser. No. 536,159. SEIDLITZ PAINT & VARNISH CO., Kansas City, Mo. Filed Sept. 29, 1947.

TURBEN

FOR LIQUID SUBSTITUTE FOR TURPENTINE.
Claims use since July 1, 1919.

Ser. No. 537,768. AMERICAN ALKYD INDUSTRIES, Carlstadt, N. J. Filed Oct. 9, 1947.

AMAVAR

FOR SYNTHETIC VARNISHES.
Claims use since Dec. 6, 1945.

Ser. No. 538,371. CHICAGO PAINTS, INC., Chicago, Ill. Filed Oct. 20, 1947.

TOM THUMB

FOR READY-MIXED PAINTS, WOOD STAINS, AND PAINT ENAMELS SOLD IN LIQUID FORM.
Claims use since 1935.

Ser. No. 539,068. M. J. MERKIN PAINT CO., INC., New York, N. Y. Filed Oct. 25, 1947. Under section 2f of the act of 1946.

NANTUCKET WHITE

No registration rights are claimed for the word "White" apart from the mark as a whole.
FOR WHITE PAINT IN LIQUID FORM FOR EXTERIOR USE.
Claims use since 1937.

CLASS 17
TOBACCO PRODUCTS

Ser. No. 521,275. R. C. OWEN COMPANY, Gallatin, Tenn. Filed Nov. 25, 1947. Under section 2f of the act of 1946.

ALLEN COUNTY

FOR CHEWING TOBACCO.
Claims use since January 1900.

Ser. No. 529,773. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947.

Hotel Statler

The drawing is lined for shading only. Applicant claims ownership of registration No. 180,892.
FOR CIGARS, CIGARETTES, CHEROOTS, AND SMOKING TOBACCO.
Claims use since 1911.

Ser. No. 529,775. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947.

Haddon Hall

The drawing is lined for shading only. Applicant claims ownership of registration No. 238,200.
FOR CIGARS AND ALL-TOBACCO CIGARETTES.
Claims use since June 20, 1924.

Ser. No. 529,777. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947. Under section 2f of the act of 1946.

Something Special

Applicant claims ownership of registration No. 381,852.
FOR CIGARS, CIGARETTES, AND TOBACCO PIPE MIXTURES.
Claims use since Oct. 2, 1931.

Ser. No. 529,781. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947.

Hotel Pennsylvania

The drawing is lined for shading only. Applicant claims ownership of registration No. 130,109.
FOR CIGARS, CIGARETTES, AND SMOKING AND CHEWING TOBACCO.
Claims use since Mar. 7, 1919.

Ser. No. 529,782. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947. Under section 2f of the act of 1946.

BRADFIELD

FOR CIGARS.
Claims use since Apr. 29, 1903.

Ser. No. 529,785. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947. Under section 2f of the act of 1946.

Nottingham

Applicant claims ownership of registration No. 238,010.
FOR CIGARS AND ALL-TOBACCO CIGARETTES.
Claims use since Aug. 4, 1924.

Ser. No. 536,912. P. LORILLARD COMPANY, New York, N. Y. Filed Oct. 6, 1947.

Old Gold

Applicant claims ownership of registration No. 238,664.
FOR CIGARETTES.
Claims use since 1884.

CLASS 19
VEHICLES

Ser. No. 537,869. DONALD R. BOLES, doing business as Boles Mfg. Co., Burbank, Calif. Filed Oct. 15, 1947.

BOLES-AERO

The surname "Boles" is disclaimed apart from the mark.
FOR HOUSE TRAILERS.
Claims use since Aug. 24, 1946.

Ser. No. 541,366. ZBROJOVKA BRNO, NARODNI PODNIK, doing business as Brno Arms Factory, National Corporation, Brno, Czechoslovakia. Filed Nov. 15, 1947.

MAGIC SHIFT

No claim is made to the denomination "Shift" apart from the association "Magic Shift" shown in the drawing. Applicant claims ownership of Czechoslovakia registration No. 10,893/BRNO dated May 23, 1947.
FOR AUTOMOTIVE VEHICLES—NAMELY, PASSENGER AUTOMOBILES, TRUCKS, BUSSES, AND MOTORCYCLES.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 536,020. THE UNITED STATES STONEWARE CO., Tallmadge, Ohio. Filed Sept. 27, 1947.

Plastile

FOR PLASTIC FLOOR, WALL, COUNTER, OR FURNITURE COVERING, COMPOSED OF SHEETS OF MATERIAL SUITABLE FOR ADHERING WITH CEMENT, TO SURFACES OVER WHICH THEY ARE LAID, THE MATERIAL BEING MADE FROM ORGANIC RESINS, PLASTICIZERS, PIGMENTS, FILLERS, AND COLORING MATERIAL.

Claims use since December 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 511,570. THE OHIO BRASS COMPANY, Mansfield, Ohio. Filed Sept. 29, 1947. Under section 2f of the act of 1946.

HAMMERHEAD

FOR ELECTRIC CONNECTORS, ELECTRIC CONDUCTORS, AND ELECTRIC RAIL BONDS.

Claims use since March 1938.

Ser. No. 515,874. GREGORY ELECTRIC COMPANY, Chicago, Ill. Filed Aug. 30, 1947. Under section 2f of the act of 1946.

GREGORY Hi-Grade

The drawing is lined for red. No claim is made to the expression "Hi-Grade" apart from the mark as shown. Applicant claims ownership of registration No. 243,772.

FOR ELECTRICAL APPARATUS—NAMELY, ELECTRIC TRANSFORMERS, ELECTRIC WELDERS, ELECTRIC MOTORS, ELECTRIC SWITCHBOARDS, AND ELECTRIC GENERATORS.

Claims use since July 1938.

Ser. No. 522,914. THE OHIO BRASS COMPANY, Mansfield, Ohio. Filed July 14, 1947.

B

Applicant claims ownership of registration No. 68,192, now expired.

FOR ELECTRICAL APPARATUS AND SUPPLIES FOR ELECTRIC CONDUCTORS COMPRISING ELECTRIC INSULATORS AND SUPPORTS OF PORCELAIN AND METAL FITTINGS USED THEREWITH—NAMELY, PIN TYPE INSULATORS AND METAL PINS THEREFOR, THIRD RAIL AND STRAIN INSULATORS, SUSPENSION TYPE INSULATORS, WALL AND ENTRANCE INSULATORS, TUBES AND BUSHINGS, SUSPENSION AND STRAIN CLAMPS, PILLAR AND POST INSULATORS, BUS BAR INSULATORS AND CLAMPS, POT HEADS, TRANSFORMER BUSHINGS, PORCELAIN ELECTRIC CONDENSERS, POST LINE INSULATORS AND ARC CONTROL GAPS, COUPLING CONDENSERS AND PHASE SHIFTERS.

Claims use since Feb. 1, 1907.

Reg. No. 37,409. Registered Dec. 3, 1901. THE WESTERN FELT WORKS, Chicago, Ill. Republished by Western Felt Works, Chicago, Ill., a corporation of Illinois.

RAMSHEAD

FOR WOOL-FELT RUGS, WOOL-FELT SWEAT COLLAR-PADS, WOOL-FELT GIG-HOUSINGS, WOOL-FELT COACH-HOUSINGS, WOOL-FELT EXPRESS HOUSINGS, WOOL-FELT BREAST-COLLAR HOUSINGS, WOOL-FELT TOP COLLAR-PADS, ROLL FELTS, FELT HAT-PADS, AND FELT HEEL PADS, AS WELL AS OTHER ARTICLES MANUFACTURED FROM FELT RELATING TO THE SAME LINE OF TRADE.

Claims use since Jan. 1, 1901.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 98,728. Registered Aug. 4, 1914. THE ALDEN SPEARE'S SONS CO., Cambridge, Mass. Republished by The Exolon Company, Tonawanda, N. Y., a corporation of Massachusetts.

CARBOLON

FOR ABRASIVES IN COMMINUTED FORM.

Claims use since Dec. 23, 1913.

Reg. No. 98,729. Registered Aug. 4, 1914. THE ALDEN SPEARE'S SONS CO., Cambridge, Mass. Republished by The Exolon Company, Tonawanda, N. Y., a corporation of Massachusetts.

EXOLON

FOR ABRASIVES IN COMMINUTED FORM.

Claims use since Jan. 17, 1914.

Reg. No. 117,700. Registered July 24, 1917. JOHN C. NOURSE, Kansas City, Mo. Republished by Nourse Oil Company, Kansas City, Mo., a corporation of Missouri.

NEATSLENE

FOR HARNESS-OIL.

Claims use since 1907.

Reg. No. 135,666. Registered Oct. 19, 1920. THE EXOLON COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present location Tonawanda, N. Y.

ELECTROGRIT

FOR ABRASIVES IN COMMINUTED FORM.

Claims use since Feb. 21, 1920.

Reg. No. 135,667. Registered Oct. 19, 1920. THE EXOLON COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present location Tonawanda, N. Y.

CARBOGRIT

FOR ABRASIVES IN COMMINUTED FORM.

Claims use since Feb. 21, 1920.

Reg. No. 137,657. Registered Nov. 30, 1920. JOSEPH A. MENARD, Seattle, Wash. Republished by Timesaver Products Company, Seattle, Wash., a corporation of Washington.

TIMESAVER

FOR GRINDING COMPOUND FOR BEARINGS, AND MACHINE PARTS.

Claims use since Mar. 10, 1919.

Reg. No. 201,255. Registered July 21, 1925. THE C. B. DOLGE COMPANY, Westport, Conn., a corporation of Connecticut. Republished by registrant.

BAM

FOR PREPARATION FOR CLEANING EXTERIORLY WALLS, WOODWORK, MARBLE, TILE, SLATE, FLOORS, FURNITURE, METAL WINDOWS, MIRRORS, BOWLS, AND SINKS AND REMOVES DIRT AND DISCOLORATIONS.

Claims use since Dec. 9, 1924.

Reg. No. 302,576. Registered Apr. 25, 1933. QUALITY SOAP MANUFACTURING COMPANY, Milwaukee, Wis. Republished by Topp Oil & Chemical Co., Milwaukee, Wis., a corporation of Wisconsin.

13 UNLUCKY FOR DIRT

FOR HAND SOAPS.

Claims use since on or about July 1932.

Reg. No. 317,117. Registered Sept. 11, 1934. THE HYGIENIC PRODUCTS COMPANY, Canton, Ohio. Republished by American-Marietta Company, Los Angeles, Calif., a corporation of Illinois.

HY-PRO

FOR DETERGENT MATERIAL USED AS A LINEN AND COTTON WASHING FLUID; A CLEANSER AND STAIN REMOVER FOR BATH TUBS, TILING, WASH BASINS, ENAMELLED WARE, REFRIGERATORS, PORCELAIN, CROCKERY, MARBLE, CUT GLASS, WINDOWS, AND GARBAGE CANS; A URINAL, BED PAN, AND SPUTUM CUP WASH, AND A CLEANER FOR KITCHEN SINKS, DRAIN BOARDS, SHELVES, LINOLEUM, AND WOODWORK.
Claims use since April 1933.

Reg. No. 322,617. Registered Mar. 12, 1935. ERNEST K. McCOY, Norfolk, Va. Republished by Glad Rag Products Corporation, New York, N. Y., a corporation of New York.

"GLAD RAG"

No claim is made to the exclusive use of the word "Rag" except in the form and association shown.
FOR CHEMICALLY TREATED AND IMPREGNATED POLISHING CLOTHS.
Claims use since June 26, 1932.

Reg. No. 337,503. Registered Aug. 11, 1936. THE MENNEN COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

The drawing is lined for the colors green, black, white, and orange. The representation of the carton and all of the wording except "Mennen" and the name of applicant corporation is disclaimed apart from the mark as shown.
FOR SHAVING CREAM.
Claims use since July 10, 1934.

Reg. No. 342,514. Registered Jan. 19, 1937. THE MENNEN COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

The drawing is lined for the colors blue, white, and yellow. The representation of the carton is disclaimed together with all of the wording appearing on the drawing, except, "Mennen" and "The Mennen Company," apart from the mark as shown.
FOR SOAP.
Claims use since Mar. 10, 1929.

Reg. No. 351,041. Registered Oct. 19, 1937. A. M. ALEXANDER, Chicago, Ill. Republished by registrant.

Pronto

FOR HAND CLEANSER IN CREAM OR PASTE FORM.
Claims use since July 1, 1930.

Reg. No. 381,317. Registered Sept. 17, 1940. RECORD SUPPLY CORPORATION, Chicago, Ill. Republished by Paul M. Cooter, doing business as The Cooter Company, Chicago, Ill.

NU-BOWL

FOR TOILET AND WASH BOWL CLEANER.
Claims use since Feb. 1, 1936.

Reg. No. 392,176. Registered Dec. 16, 1941. CHEMICALS, INC., San Francisco and Oakland, Calif., a corporation of California. Republished by registrant.

Vano

FOR HOUSEHOLD CLEANER.
Claims use since June 1, 1940.

CLASS 5

ADHESIVES

Reg. No. 259,285. Registered July 30, 1929. HARRY L. GREENBAUM, doing business as Technical Color and Chemical Works, Brooklyn, N. Y. Republished by Technical Color and Chemical Works, Inc., Brooklyn, N. Y., a corporation of New York.

RED-DEVIL

FOR GLUE.
Claims use since Jan. 15, 1918.

Reg. No. 357,989. Registered June 21, 1938. SEMON BACHE & COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

MURAMASTIC

FOR ADHESIVE MASTIC.
Claims use since Feb. 3, 1938.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 87,808. Registered Aug. 6, 1912. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

RE-ZYME

FOR REMEDY FOR DISEASES OF THE KIDNEYS, COMPRISING THE PRIMARY SUBSTANCE FROM THE CELLS OF THE CORTEX AND THE CONVOLUTED TUBULES OF THE KIDNEYS.
Claims use since July 26, 1911.

Reg. No. 136,514. Registered Nov. 2, 1920. FLORENCE N. LEWIS, New York, N. Y. Republished by Elizabeth Arden Sales Corporation, New York, N. Y., a corporation of Delaware.

VELVA

FOR TOILET CREAM.
Claims use since 1910.

Reg. No. 146,128. Registered Aug. 30, 1921. PARFUMERIE HOUBIGANT, Paris, France, assignor to Houbigant, Inc. Republished by Houbigant, Inc., New York, N. Y., a corporation of New York.

PARFUM
INCONNU

The word "Parfum" is disclaimed apart from the mark as shown.
FOR PERFUMES, TOILET WATERS, SACHET AND SACHET POWDERS.
Claims use since 1910.

Reg. No. 158,052. Registered Aug. 22, 1922. PARFUMERIE HOUBIGANT, Paris, France, assignor to Houbigant, Inc., New York, N. Y., a corporation of New York. Republished by Houbigant, Inc., New York, N. Y., a corporation of New York.

MON
BOUDOIR

FOR PERFUMES, TOILET WATER, SACHET, SACHET POWDERS.
Claims use since 1919.

Reg. No. 208,110. Registered Jan. 19, 1926. HARRY LEONARD GREENBAUM, doing business as Technical Works, Brooklyn, N. Y. Republished by Technical Color & Chemical Works, Inc., Brooklyn, N. Y., a corporation of New York.

RED-DEVIL

The drawing is lined for the color red.
FOR OXALIC ACID, BISMARCK BROWN ANILINE, ELECTRIC BULB COLORING, DENATURED ALCOHOL, AND SPRAY PERFUME.
Claims use since May 1917.

Reg. No. 218,007. Registered Sept. 14, 1926. THE F. W. FITCH COMPANY, Des Moines, Iowa, a corporation of Iowa. Republished by registrant.

Ideal

FOR HAIR TONIC.
Claims use since 1893.

Reg. No. 219,784. Registered Oct. 26, 1926. DAVID LAUDERBACK, doing business as Monroe Exterminating Company, not Inc., Chicago, Ill. Republished by Monroe Laboratories, Inc., Chicago, Ill., a corporation of Illinois.

FLY NO MORE

FOR CHEMICAL ANTISEPTIC, INSECTICIDE, GERMICIDE, DISINFECTANT, AND DEODORANT FOR SHEEP, CATTLE, HORSES, AND POULTRY AND FOR HOUSEHOLD PURPOSES.
Claims use since Dec. 1, 1920.

Reg. No. 221,886. Registered Dec. 14, 1926. HOUBIGANT, INC., New York, N. Y., a corporation of New York. Republished by registrant.

LE PARFUM IDEAL

The words "Le Parfum" are disclaimed apart from the mark as shown.
FOR PERFUME, TOILET WATER, LOTION, EAU VEGETALE, FACE POWDER, SACHETS, DUSTING POWDER, TALCUM POWDER, COMPACT POWDER, COMPACT ROUGE, BATH SALTS, AND BRILLIANTINE.
Claims use since February 1900.

Reg. No. 226,004. Registered Mar. 29, 1927. HOUBIGANT, INC., New York, N. Y., a corporation of New York. Republished by registrant.

The words "Le Parfum" are disclaimed apart from the mark as shown.

FOR PERFUME, TOILET WATER, LOTION, EAU VEGETALE, FACE POWDER, SACHETS, DUSTING POWDER, TALCUM POWDER, COMPACT POWDER, COMPACT ROUGE, BATH SALTS AND BRILLIANTINE.

Claims use since February 1900.

Reg. No. 243,916. Registered July 3, 1928. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

REED & CARNRICK

FOR MEDICINAL PREPARATIONS—NAMELY, GLANDULAR PRODUCTS FOR USE IN THE TREATMENT OF FUNCTIONAL INDIGESTION, GASTRITIS, DYSPEPSIA, DUODENAL CATARRH, VOMITING OF PREGNANCY, LOSS OF APPETITE, HEARTBURN, GASTRALGIA, NEURASTHENIA, MALNUTRITION, DEBILITY, ACUTE INFECTION, NEPHRITIS, UREMIA, MALFUNCTIONING OR DISFUNCTIONING OF THE OVARIES AND THE TESTICLES AND RELATED GLANDS, CONSTIPATION, INTESTINAL INDIGESTION, POST-OPERATIVE TREATMENT, GALLSTONES, TO RESTORE PANCREATIVE ACTIVITY, RHEUMATISM, GOUT, ALSO GENERAL TONICS, NOSE, EYE, AND THROAT WASHES, ANTISEPTICS, PROPHYLACTICS, AND GERMICIDALS.

Claims use since 1860.

Reg. No. 289,537. Registered Dec. 1, 1931. THE C. B. DOLGE COMPANY INC., Westport, Conn., a corporation of Connecticut. Republished by registrant.

DIWORMA

FOR CHEMICAL PREPARED ESPECIALLY FOR USE ON PUTTING GREENS TO BANISH THE WORM NUISANCE.

Claims use since October 1930.

Reg. No. 300,173. Registered Jan. 10, 1933. NOURSE OIL COMPANY, Kansas City, Kans., a corporation of Missouri. Republished by registrant.

KNOK-EM-KOLD

FOR INSECTICIDES.

Claims use since Sept. 1, 1931.

Reg. No. 313,309. Registered May 22, 1934. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

COCOLOID

FOR SODIUM ALGINATE PRODUCT, TO BE USED IN THE DAIRY TRADE AS A SUSPENDING AGENT FOR COCOA.

Claims use since on or about May 20, 1933.

Reg. No. 316,283. Registered Aug. 21, 1934. BRUNSWIG DRUG COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

FOR ANTACID POWDER ANTISEPTIC (SOLUTION) ARNICA SALVE, ASTHMA PREPARATION, BABY COUGH SYRUP AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.

Claims use since April 1907.

Reg. No. 316,295. Registered Aug. 21, 1934. THE MARYLAND PHARMACEUTICAL COMPANY, Baltimore, Md., a corporation of Maryland. Republished by registrant.

REL

FOR HEAD COLD JELLY.

Claims use since Apr. 23, 1934.

Reg. No. 321,597. Registered Feb. 5, 1935. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

DARILOID

FOR ALGINATE PRODUCT TO BE USED IN THE DAIRY TRADE AS A STABILIZER IN ICE CREAM, CHOCOLATE MILK, AND OTHER DAIRY PRODUCTS.

Claims use since on or about Aug. 28, 1934.

Reg. No. 325,356. Registered June 18, 1935. MERCHANTS SERVICE CORPORATION, Chicago, Ill. Republished by Paul M. Cooter, doing business as The Cooter Company, Chicago, Ill.

NU-DRAIN

FOR DRAIN PIPE SOLVENT.

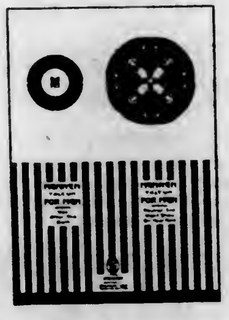
Claims use since Jan. 11, 1935.

Reg. No. 333,358. Registered Mar. 17, 1936. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

KELTEX

FOR ALGINATE PRODUCT TO BE USED AS A COLLOID PARTICULARLY IN THE TEXTILE TRADE AND OTHER COLLOID USES SUCH AS IN PRINTING PASTES AND IN BOILER COMPOUNDS.

Claims use since on or about Oct. 4, 1935.



Reg. No. 333,434. Registered Mar. 24, 1936. HAMILTON C. BATES, doing business as C. J. Bates & Son, Chester, Conn. Republished by C. J. Bates & Son, Chester, Conn., a firm.

Barbara Bates

FOR NAIL POLISH AND BLEACH, POWDERS, LOTIONS, CREAMS, AND SOFTENERS FOR THE HANDS, FEET, AND FACE, CUTICLE CREAMS.

Claims use since on or about Nov. 5, 1935.

Reg. No. 337,361. Registered Aug. 4, 1936. THE MENNEN COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

The drawing is lined for the colors brown, cream, red, and black. The representation of the can and all of the wording except "Mennen" and "The Mennen Company" are disclaimed apart from the mark as shown.

FOR TALCUM POWDER.

Claims use since Mar. 13, 1922.

Reg. No. 337,749. Registered Aug. 18, 1936. THE MENNEN COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

The drawing is lined for the colors blue, white and yellow. The representation of the can is disclaimed together with all of the wording as shown in the drawing except the word "Mennen" and "The Mennen Company."

FOR TALCUM POWDER.

Claims use since Oct. 6, 1933.

Reg. No. 343,923. Registered Mar. 9, 1937. PAPER MAKERS CHEMICAL CORPORATION, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

CONCENTAL

FOR HIGHLY CONCENTRATED SULPHONATED TALLOW FOR USE AS A FOAM KILLER AND AS A SOFTENER AND FINISHER IN TEXTILE MANUFACTURING.

Claims use since Dec. 20, 1934.

Reg. No. 343,924. Registered Mar. 9, 1937. PAPER MAKERS CHEMICAL CORPORATION, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

ULTROIL

FOR SULPHONATED CASTOR OIL.

Claims use since Apr. 1, 1930.

Reg. No. 355,912. Registered Apr. 5, 1938. HERCULES POWDER COMPANY, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

Mellol

FOR OIL BASE TEXTILE FINISHING AGENT.

Claims use since Aug. 17, 1937.

Reg. No. 356,328. Registered Apr. 26, 1938. HERCULES POWDER COMPANY, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

CLARINOL

FOR CHEMICAL TEXTILE FINISHER.
Claims use since June 9, 1933.

Reg. No. 356,746. Registered May 10, 1938. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

R P G

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since November 1932.

Reg. No. 356,747. Registered May 10, 1938. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

SYNTHRAPOL

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since November 1934.

Reg. No. 356,748. Registered May 10, 1938. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

SYNTHAROL

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since 1933.

Reg. No. 356,749. Registered May 10, 1938. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

SYNTHRAVON

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since 1934.

Reg. No. 362,444. Registered Nov. 15, 1938. HERCULES POWDER COMPANY, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

BESTOWAX

FOR EMULSIFIED COMBINATION OF WAXES AND FATS FOR TEXTILE FINISHING.
Claims use since Apr. 9, 1938.

Reg. No. 362,445. Registered Nov. 15, 1938. HERCULES POWDER COMPANY, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

TALCON

FOR SULFONATED HIGH TITRE FATS USED IN THE FINISHING OF TEXTILES.
Claims use since Mar. 22, 1937.

Reg. No. 362,446. Registered Nov. 15, 1938. HERCULES POWDER COMPANY, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

TRAMOLIN

FOR TREATED VEGETABLE OIL USED IN TEXTILE FINISHING.
Claims use since Apr. 9, 1938.

Reg. No. 363,180. Registered Dec. 13, 1938. HERCULES POWDER COMPANY, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

GLACHIN FINISH

The word "Finish" is disclaimed apart from the mark as shown.
FOR EMULSIFIED VEGETABLE WAXES AND FATS FOR TEXTILE FINISHING.
Claims use since Apr. 9, 1938.

Reg. No. 366,190. Registered Apr. 4, 1939. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif. Republished by Nion Corporation, Los Angeles, Calif., a corporation of California.

nion

FOR VITAMIN CONCENTRATE IN SYRUP AND TABLET FORM TO BE USED IN THE TREATMENT OF VITAMIN B DEFICIENCY.
Claims use since Aug. 1, 1938.

Reg. No. 368,586. Registered June 27, 1939. HERCULES POWDER COMPANY, Wilmington, Del. Republished by Arnold, Hoffman & Co. Incorporated, Providence, R. I., a corporation of Rhode Island.

PENETREX

The lining in the drawing is for shading only.
FOR OIL USED AS A DYEING ASSISTANT AND PENETRANT IN THE DYEING OF TEXTILES.
Claims use since Oct. 29, 1937.

Reg. No. 379,460. Registered July 9, 1940. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

RESYNON

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since Feb. 19, 1940.

Reg. No. 382,136. Registered Oct. 15, 1940. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

KELGUM

FOR ALGINATE PRODUCT FOR USE AS A HYDROPHILIC COLLOID IN ALL INDUSTRIAL APPLICATIONS SUCH AS IN BOILER COMPOUNDS, WATER PAINTS, CEMENT, DRILLING MUDS OR THE LIKE.
Claims use since on or about Apr. 11, 1940.

Reg. No. 384,840. Registered Feb. 4, 1941. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

AHCOBOND

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since Mar. 29, 1940.

Reg. No. 387,088. Registered June 10, 1941. DESOTO CHEMICAL COMPANY, Arcadia, Fla., a corporation of Florida. Republished by registrant.

GATOR
ROACH HIVES

The word "Roach" is disclaimed apart from the mark as shown.
FOR PREPARATION TO BE USED FOR THE EXTERMINATION OF ROACHES, SILVERFISH, WATERBUGS, AND CRICKETS.
Claims use since 1925.

Reg. No. 389,031. Registered July 22, 1941. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

AHCOPRINT

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since Jan. 30, 1941.

Reg. No. 393,451. Registered Feb. 17, 1942. CHLORINE SOLUTIONS, INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

FOR BLEACHING FLUID.
Claims use since May 1, 1930.

Reg. No. 402,576. Registered Aug. 3, 1943. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y., a corporation of New York. Republished by registrant, present location Tuckahoe, N. Y.

BURROUGHS WELLCOME & CO. (U.S.A.) INC.

FOR ACETOPHENETIDIN; ACETYLCHOLINE BROMIDE; ACETYLSALICYLIC ACID; METHANOL, PURE METHYL, ALCOHOL AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since 1884.

Reg. No. 402,974. Registered Aug. 24, 1943. KING MANUFACTURING COMPANY, St. Louis, Mo. Republished by Adolph N. Gaebler, doing business as King Manufacturing Co.

HEADINE

FOR MEDICINAL PREPARATION USED FOR THE RELIEF OF HEADACHE, NEURALGIA, FEVER, PAIN, AND INFLUENZA.
Claims use since 1889.

Reg. No. 406,163. Registered Mar. 14, 1944. PARFUMS WEIL PARIS CO., New York, N. Y., a limited partnership. Republished by registrant.

Grigri

FOR PERFUMES.
Claims use since Sept. 13, 1943.

Reg. No. 406,957. Registered May 9, 1944. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

AHCOFIX

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since Oct. 29, 1942.

Reg. No. 406,938. Registered May 9, 1944. ARNOLD, HOFFMAN & Co. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

AHCOWET

FOR CHEMICAL PRODUCTS FOR USE IN PROCESSING TEXTILES.
Claims use since Sept. 4, 1942.

Reg. No. 411,986. Registered Feb. 13, 1945. MARTHA BAKER, Burlingame, Calif., a firm. Republished by registrant, present location Santa Rosa, Calif.

Essence Conversation

The word "Essence" is disclaimed apart from the mark as shown.
FOR TOILET WATERS.
Claims use since Oct. 1, 1938.

Reg. No. 412,692. Registered Mar. 20, 1945. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

KELCOLOID

FOR ALGIN COMPOUND, FOR USE AS A HYDROPHILIC COLLOID POSSESSING STABILIZING, BODYING, FILM-FORMING, SUSPENDING, EMULSIFYING, AND WATER-HOLDING PROPERTIES IN COSMETIC AND PHARMACEUTICAL PREPARATIONS SUCH AS MINERAL OIL AND OTHER EMULSIONS, DENTIFRICES, JELLIES, SUSPENSIONS, OINTMENTS, CREAMS, AND LOTIONS; TEXTILE PRINT PASTES; POLISHES; ADHESIVES; AND IN OTHER INDUSTRIAL FIELDS.
Claims use since March 1930.

Reg. No. 430,278. Registered June 10, 1947. THE MENNEN COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

ALAIR

FOR HAIR DRESSING.
Claims use since Apr. 3, 1945.

Reg. No. 430,279. Registered June 10, 1947. THE MENNEN COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

HEAD UP

FOR HAIR DRESSING.
Claims use since Apr. 3, 1946.

Reg. No. 430,364. Registered June 10, 1947. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

SUPERLOID

FOR ALGIN PRODUCT FOR USE AS A HYDROPHILIC COLLOID POSSESSING CREAMING, STABILIZING, BODYING, BLOCKING, SUSPENDING AND EMULSIFYING PROPERTIES IN NATURAL AND SYNTHETIC LATICES AND THEIR COMPOSITIONS, CERAMIC BODIES, ADHESIVES, TEXTILE SIZE AND PRINT PASTES, PAPER COATINGS, FIRE RETARDING AND MOLD PROOFING COMPOSITIONS, LEATHER FINISHES, BOILER COMPOUNDS, RESIN EMULSIONS, POLISHES, SEPARATING AND ANTISTICK COMPOSITIONS AND IN OTHER INDUSTRIAL FIELDS.
Claims use since Dec. 26, 1933.

Reg. No. 430,991. Registered July 1, 1947. ARNOLD, HOFFMAN & Co. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

The drawing is lined to indicate the color red.
FOR CHEMICAL TO BE ADDED TO FIRE FIGHTING LIQUID TO LOWER ITS SURFACE TENSION.
Claims use since Mar. 28, 1946.

Reg. No. 431,927. Registered Aug. 12, 1947. ARNOLD, HOFFMAN & Co. INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

ACETYLON

FOR COLORING PRODUCTS FOR NATURAL FIBERS, ACETATE, AND SYNTHETIC FIBERS.
Claims use since Apr. 30, 1946.

Reg. No. 431,942. Registered Aug. 12, 1947. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

ELECTRIC

The drawing is lined for shading only.
FOR POWDERED LAUNDRY STARCH.
Claims use since Sept. 4, 1886.

Reg. No. 432,867. Registered Sept. 16, 1947. THE RESINOUS PRODUCTS & CHEMICAL COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

MONOPLEX

FOR SYNTHETIC ORGANIC CHEMICALS SUITABLE FOR USE AS SOFTENERS, MODIFIERS, ELASTICATORS, AND PLASTICIZERS OF RESINOUS AND/OR RUBBERY MATERIALS.
Claims use since July 17, 1946.

CLASS 10

FERTILIZERS

Reg. No. 67,408. Registered Feb. 4, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J., Richmond and Norfolk, Va., Charleston, S. C., and elsewhere. Republished by Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia.

POWHATAN

FOR FERTILIZERS.
Claims use since 1885.

Reg. No. 67,682. Registered Feb. 11, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J., Richmond and Norfolk, Va., Charleston, S. C., and elsewhere. Republished by Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia.

The mark is colored red.
FOR FERTILIZERS.
Claims use since prior to 1898.

Reg. No. 68,321. Registered Mar. 31, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J., Richmond and Norfolk, Va., Charleston, S. C., and elsewhere. Republished by Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia.

FOR FERTILIZERS.
Claims use since 1890.

Reg. No. 69,051. Registered May 19, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J., Richmond and Norfolk, Va., Charleston, S. C., and elsewhere. Republished by Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia.

The mark is colored red.
FOR FERTILIZERS.
Claims use since 1898.

Reg. No. 69,246. Registered May 26, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J., Richmond and Norfolk, Va., Charleston, S. C., and elsewhere. Republished by Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia.

LITTLE GIANT

FOR FERTILIZERS.
Claims use since 1894.

Reg. No. 69,764. Registered July 7, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J., Richmond and Norfolk, Va., Charleston, S. C., and elsewhere. Republished by Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia.

PROLIFIC COTTON GROWER

FOR FERTILIZERS.
Claims use since 1882.

Reg. No. 240,880. Registered Apr. 10, 1928. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va., a corporation of Virginia. Republished by registrant.

BRIGHT LEAF

FOR FERTILIZERS.
Claims use since 1895.

Reg. No. 240,881. Registered Apr. 10, 1928. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va., a corporation of Virginia. Republished by registrant.

GOLD LEAF

FOR FERTILIZERS.
Claims use since 1903.

Reg. No. 240,899. Registered Apr. 10, 1928. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va., a corporation of Virginia. Republished by registrant.

V-C FAIRWAY

FOR FERTILIZERS.
Claims use since April 1927.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 204,636. Registered Oct. 20, 1925. STREATOR BRICK COMPANY, Streator, Ill., a corporation of Illinois. Republished by registrant.

FOR BRICKS.
Claims use since Apr. 25, 1925.

Reg. No. 212,068. Registered Apr. 27, 1926. STREATOR BRICK COMPANY, Streator, Ill., a corporation of Illinois. Republished by registrant.

Shaletex

FOR BRICKS.
Claims use since December 1920.

Reg. No. 224,926. Registered Mar. 8, 1927. COLD SPRING GRANITE COMPANY, Cold Spring, Minn., a corporation of Minnesota. Republished by registrant.

RAINBOW

FOR CUT GRANITE.
Claims use since July 1, 1925.

Reg. No. 266,875. Registered Feb. 4, 1930. UNITED STATES REFRACTORIES CORPORATION, Mount Union, Pa. Republished by North American Refractories Company, Cleveland, Ohio, a corporation of Delaware.

MTU

FOR BRICK.
Claims use since Aug. 1, 1912.

Reg. No. 330,064. Registered Nov. 19, 1935. BOETTCHER & KELLOGG CO., Evansville, Ind., a corporation of Indiana. Republished by registrant.

FOR ASPHALT ROLL, ROOFING AND SHINGLES AND ROOF COATING.
Claims use since July 3, 1935.

Reg. No. 368,971. Registered July 11, 1939. SEMON BACHE & COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

MURAGLAS

FOR COLORED GLASS TILES.
Claims use since Feb. 3, 1938.

Reg. No. 383,785. Registered Dec. 24, 1940. ILLINOIS LUMBER MANUFACTURING COMPANY, Cairo, Ill., a corporation of Illinois. Republished by registrant.

Stylecraft HOMES

The word "Homes" is disclaimed apart from the mark as shown.
FOR PREFABRICATED HOUSES AND PARTS THEREOF.
Claims use since Apr. 20, 1940.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 232,585. Registered Sept. 13, 1927. FOOTE, PIERSON & COMPANY, INC., New York, N. Y. Republished by The Bassick Company, Bridgeport, Conn., a corporation of Connecticut.

Ncmar

FOR SLIDE CASTERS FOR FURNITURE.
Claims use since about Aug. 1, 1926.

Reg. No. 232,850. Registered Sept. 20, 1927. THE D. T. WILLIAMS VALVE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

VULCO DISC

FOR GLOBE VALVES, ANGLE VALVES, CROSS STOP VALVES, CHECK VALVES, AND Y VALVES OF IRON AND BRASS, AND VALVE DISKS.
Claims use since Mar. 3, 1927.

Reg. No. 280,213. Registered Feb. 10, 1931. THE AMERICAN ART WORKS, INC., Coshocton, Ohio, a corporation of Ohio. Republished by registrant.

Social Supper

FOR SERVING TRAYS OF METAL OTHER THAN PRECIOUS METAL.
Claims use since Apr. 15, 1930.

Reg. No. 401,408. Registered May 18, 1943. NATIONAL TECHNICAL LABORATORIES, South Pasadena, Calif. Republished by Murdock Distributors, Inc., Los Angeles, Calif., a corporation of California.

STERIMATIC

FOR AUTOMATIC GERMICIDE MIXERS AND DISPENSERS FOR USE IN DISH AND SIMILAR STERILIZING.
Claims use since Aug. 22, 1939.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 231,845. Registered Aug. 30, 1927. SHEET ALUMINUM CORPORATION, Jackson, Mich., a corporation of Michigan. Republished by registrant.

HYBLUM

FOR PURE AND ALLOYED ALUMINUM SHEETS, BARS, BLOCKS, RAILS, AND ROLLED, CAST OR PRESSED SHAPES.
Claims use since Oct. 1, 1926.

Reg. No. 374,457. Registered Jan. 9, 1940. LITTLE BROTHERS FOUNDRY COMPANY, Port Huron, Mich. Republished by Littite Foundries, Inc., Port Huron, Mich., a corporation of Michigan.

The words "Alloy Iron" are disclaimed apart from the mark as shown.
FOR IRON ALLOY CASTINGS.
Claims use since June 1, 1936.

CLASS 15

OILS AND GREASES

Reg. No. 138,843. Registered Jan. 11, 1921. NOURSE OIL COMPANY, Rosedale, Kans., and Kansas City, Mo., a corporation of Missouri. Republished by registrant.

The word "Brands" is disclaimed apart from the mark shown.
FOR LUBRICATING OILS.
Claims use since Jan. 1, 1915.

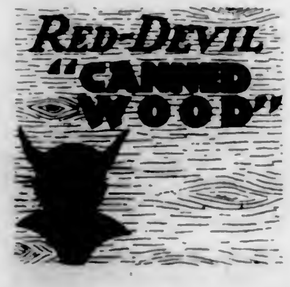
Reg. No. 294,290. Registered May 24, 1932. THE R. J. BROWN COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FOR LUBRICATING OILS AND GREASES AND KEROSENE AND GASOLINE.
Claims use since Apr. 21, 1931.

Reg. No. 296,342. Registered Aug. 2, 1932. THE R. J. BROWN COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FOR LUBRICATING OILS AND GREASES AND KEROSENE AND GASOLINE.
Claims use since May 15, 1931.

Reg. No. 331,162. Registered Dec. 31, 1935. PATE OIL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.



The words "The Shifty Gear Lubricant" are disclaimed apart from the mark as shown.
FOR LUBRICATING OILS AND GREASES.
Claims use since Apr. 10, 1933.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 247,505. Registered Sept. 25, 1928. HARRY L. GREENBAUM, doing business as Technical Color and Chemical Works, New York, N. Y. Republished by Technical Color & Chemical Works, Inc., Brooklyn, N. Y., a corporation of New York.

No registration rights are claimed for the words "Canned Wood."
FOR PLASTIC MATERIAL SIMILAR TO PUTTY WHICH HARDENS ON EXPOSURE TO THE AIR, GIVING A SURFACE AND BODY JUST LIKE WOOD.
Claims use since Jan. 6, 1927.

Reg. No. 423,947. Registered Sept. 17, 1946. FRANK B. NOBREGA, Kansas City, Mo. Republished by registrant.

Glo-Cen

FOR SURFACE POLISHING WAX FOR SURFACE TREATING BATTLESHIP LINOLEUM, INLAID LINOLEUM, TILE TERRAZO, ASPHALT TILE, RUBBER FINISHED SURFACES, SOFT AND HARD MASTIC SURFACES AND PAINTED AND SEALED SURFACES SAID WAX BEING SUCH AS TO PRODUCE A LASTING GLOSSY SURFACE IN A FEW MINUTES AFTER IT IS APPLIED TO THE SURFACE.
Claim suse since Apr. 16, 1945.

CLASS 19

VEHICLES

Reg. No. 86,242. Registered Apr. 23, 1912. ADOLPH SAURER, Arbon, Switzerland. Republished by Societe Anonyme Adolphe Saurer, Arbon, Switzerland, a corporation of the Commonwealth of Switzerland.

FOR AUTOMOBILES, AUTOMOBILE WHEELS, RADIATORS, CHASSIS, BODIES, TRANSMISSION-GEARING AND MOTOR-BOATS.
Claims use since May 1, 1910.

Reg. No. 396,467. Registered July 21, 1942. BENDIX-WESTINGHOUSE AUTOMOTIVE AIR BRAKE COMPANY, Pittsburgh, Pa., a corporation of Delaware. Republished by registrant, present location Elyria, Ohio.

The words "Air Brakes" are disclaimed apart from the mark as shown.
FOR AUTOMOTIVE VEHICLE BRAKING UNITS COMPRISING BRAKE CHAMBERS OF THE DIFFERENTIAL AIR PRESSURE TYPE, BRAKE CONTROL VALVES, AIR COMPRESSORS, AIR PRESSURE RESERVOIRS AND BRAKE SLACK ADJUSTERS.
Claims use since Nov. 6, 1940.

Reg. No. 396,581. Registered July 28, 1942. RAY R. BIRCH, East Liverpool, Ohio. Republished by registrant.

HERE 'TIS

FOR AUTOMOBILES AND ACCESSORIES—NAMELY, AUTOMOBILE HEATERS UTILIZING HEAT FROM ENGINE, SEAT COVERS, BUMPER GUARDS, WINDSHIELD WIPERS, STEERING WHEELS, HUB CAPS, REAR VIEW MIRRORS, RADIATOR CAPS, AND RADIATOR ORNAMENTS.
Claims use since June 1, 1941.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 106,297. Registered Oct. 19, 1915. CENTRAL TUBE COMPANY, Pittsburgh, Pa. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

FOR ELECTRIC-CONDUIT PIPE.
Claims use since April 1, 1912.

Reg. No. 242,106. Registered May 15, 1928. NATIONAL LEAD BATTERY CO., St. Paul, Minn. Republished by National Battery Company, St. Paul, Minn., a corporation of Delaware.

NATIONAL

FOR BATTERIES.
Claims use since December 1918.

Reg. No. 243,883. Registered July 3, 1928. GOULD STORAGE BATTERY CO., INC., Depew, N. Y. Republished by National Battery Company, St. Paul, Minn., a corporation of Delaware.

KATHANODE

FOR STORAGE BATTERIES AND PARTS THEREOF.
Claims use since Aug. 24, 1927.

Reg. No. 379,691. Registered July 23, 1940. SPEER CARBON COMPANY, Saint Marys, Pa., a corporation of Pennsylvania. Republished by registrant.

SPEER MULTIFLEX

FOR CARBON BRUSHES.
Claims use since on or about Sept. 20, 1938.

Reg. No. 379,692. Registered July 23, 1940. SPEER CARBON COMPANY, Saint Marys, Pa., a corporation of Pennsylvania. Republished by registrant.

SPEER TRANSERT

FOR CARBON BRUSHES.
Claims use since on or about Sept. 20, 1938.

Reg. No. 414,105. Registered May 29, 1945. GENERAL CONTROL COMPANY, Cambridge, Mass., a corporation of Massachusetts. Republished by registrant, present location, Brighton, Mass.

FOR CAM LEVER SWITCHES, MANUALLY OPERATED FOOT SWITCHES, ROTARY SWITCHES, TRANSFORMERS, TIME DELAY SWITCHES AND SPECIAL ELECTROMECHANICAL AND ELECTRONIC CONTROL DEVICES—NAMELY, TIME-CONTROLLED MECHANISM FOR CONTROLLING THE SEQUENCE OF OPERATION OF MACHINE TOOLS.
Claims use since Mar. 1, 1935.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 123,032. Registered Oct. 8, 1918. ESSANAR COMPANY, INC., New York, N. Y. Republished by Selchow & Righter Company, Brooklyn, N. Y., a corporation of New York.

A Royal Game of India

FOR BOARD AND COUNTER GAMES.
Claims use since 1869.

Reg. No. 123,033. Registered Oct. 8, 1918. ESSANAR COMPANY, INC., New York, N. Y. Republished by Selchow & Righter Company, Brooklyn, N. Y., a corporation of New York.

PARCHEESI

FOR BOARD AND COUNTER GAMES.
Claims use since 1869.

Reg. No. 201,300. Registered July 21, 1925. SELCHOW & RIGHTER COMPANY, New York, N. Y. Republished by Selchow & Righter Company (1939), Buffalo, N. Y., a corporation of New York.

SLICED

FOR GAMES OF A PICTURE-PUZZLE TYPE.
Claims use since Dec. 1, 1875.

Reg. No. 266,816. Registered Feb. 4, 1930. WM. FILENE'S SONS COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

Filene's

FOR IMPLEMENTS, APPARATUS, AND ARTICLES USED IN TENNIS, GOLF, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Jan. 1, 1928.

Reg. No. 428,116. Registered Mar. 11, 1947. SIMON MATTRESS MANUFACTURING CO., San Francisco, Calif., a corporation of California. Republished by registrant.

simon pure

FOR SLEEPING BAGS IN THE NATURE OF BEDS.
Claims use since February 1930.

Reg. No. 432,127. Registered Aug. 19, 1947. ELEANOR F. KLAUBER, doing business as Klauber Novelty Co., Chicago, Ill. Republished by registrant.

ROYAL KENO

The word "Keno" is disclaimed apart from the mark as shown.
FOR CARD GAMES.
Claims use since on or about Aug. 1, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 70,013. Registered July 21, 1908. ADDRESSOGRAPH COMPANY, Chicago, Ill. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

DUPLIGRAPH

FOR PRINTING MACHINES.
Claims use since Apr. 25, 1904.

Reg. No. 86,706. Registered May 28, 1912. JOHN G. HENDERSON, Charlottesville, Va. Republished by Robert H. Henderson, East Orange, N. J.

HENDERSON

FOR BORING MACHINES FOR BORING JOIST FOR ELECTRIC LIGHT WIRING.
Claims use since May 1893.

Reg. No. 87,662. Registered July 30, 1912. ADOLPH SAURER, Arbon, Switzerland. Republished by Societe Anonyme Adolphe Saurer, Arbon, Switzerland, a corporation of the Commonwealth of Switzerland.

FOR EMBROIDERING MACHINES, LACE MACHINES, WEAVING MACHINES AND PARTS THEREOF.
Claims use since May 1, 1910.

Reg. No. 134,160. Registered Aug. 17, 1920. JABEZ BURNS & SONS, New York, N. Y. Republished by Jabez Burns & Sons, Inc., New York, N. Y., a corporation of New York.

BURNS

FOR MACHINERY AND PARTS THEREOF FOR TREATING COFFEE, TEA, SPICES, BAKING-POWDER, CEREALS, NUTS, AND COCOA, COMPRISING ROASTERS, COOLERS FOR ROASTED OR HEATED MATERIALS, STONERS, MILLS, SIFTERS, CLEANERS, GRADERS, MIXERS, CONVEYERS, FANS, AND COLLECTORS.
Claims use since 1864.

Reg. No. 138,781. Registered Jan. 11, 1921. JABEZ BURNS & SONS, New York, N. Y. Republished by Jabez Burns & Sons, Inc., New York, N. Y., a corporation of New York.

JUBILEE

FOR ROASTERS AND PARTS AND SUPPLIES FOR SAME FOR ROASTING FOOD PRODUCTS, SUCH AS COFFEE, COCOA, PEANUTS, CEREALS, ETC.
Claims use since 1914.

Reg. No. 144,278. Registered June 28, 1921. PATRICK J. SHOUVLIN, Springfield, Ohio. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

SUPERIOR

FOR INTERNAL-COMBUSTION ENGINES, BOTH PORTABLE AND STATIONARY, AND COMBINED WITH PUMPS, ALSO GAS OR VACUUM PUMPS.
Claims use since 1889.

Reg. No. 174,160. Registered Oct. 9, 1923. JABEZ BURNS & SONS, New York, N. Y. Republished by Jabez Burns & Sons, Inc., New York, N. Y., a corporation of New York.

PREMIX

FOR ROASTERS AND PARTS AND SUPPLIES FOR SAME FOR ROASTING FOOD PRODUCTS, SUCH AS COFFEE, COCOA, PEANUTS, CEREALS, ETC.
Claims use since Apr. 26, 1923.

Reg. No. 217,526. Registered Aug. 31, 1926. THE KEMPSMITH MANUFACTURING CO., West Allis, Wis. Republished by The Kempsmith Machine Company, West Allis, Wis., a corporation of Wisconsin.

KEMPSMITH

FOR PLAIN MILLING MACHINES, UNIVERSAL MILLING MACHINES, VERTICAL MILLING MACHINES, HAND MILLING MACHINES, LINCOLN-TYPE MILLING MACHINES, ROTARY MILLING MACHINES, MILLING-MACHINE ATTACHMENTS, MILLING-MACHINE TOOLS AND FIXTURES, MILLING CUTTERS, SPECIAL METAL-WORKING MACHINES EMPLOYING ROTARY CUTTERS, ARBORS, AND METAL-WORKING MACHINE TOOLS.
Claims use since 1888.

Reg. No. 219,918. Registered Oct. 26, 1926. THE KEMPSMITH MANUFACTURING CO., West Allis, Wis. Republished by The Kempsmith Machine Company, West Allis, Wis., a corporation of Wisconsin.

MAXIMILLER

FOR ALL-GEARED PLAIN MILLING MACHINES, ALL-GEARED UNIVERSAL MILLING MACHINES, ALL-GEARED VERTICAL MILLING MACHINES, AND ALL-GEARED ADJUSTABLE-SPINDLE MILLING MACHINES.
Claims use since 1917.

Reg. No. 295,572. Registered July 5, 1932. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

FLOCCULATOR

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR AGITATING APPARATUS.
Claims use since Aug. 31, 1931.

Reg. No. 303,107. Registered May 9, 1933. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

SIFEED

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR SEDIMENTATION APPARATUS SUCH AS THICKENERS AND CLARIFIERS.
Claims use since Nov. 10, 1932.

Reg. No. 311,773. Registered Apr. 3, 1934. JABEZ Burns & Sons, Inc., New York, N. Y., a corporation of New York. Republished by registrant.

GRANULET

FOR MACHINES FOR GRINDING AND TREATING COFFEE AND COFFEE CHAFF.
Claims use since Oct. 27, 1933.

Reg. No. 311,946. Registered Apr. 10, 1934. THE MENNEN COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

MENNEN

FOR RAZOR BLADES.
Claims use since Aug. 23, 1933.

Reg. No. 315,283. Registered July 24, 1934. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Bond

FOR SPEED-REDUCING GEAR UNITS.
Claims use since Apr. 13, 1933.

Reg. No. 320,017. Registered Dec. 18, 1934. JABEZ BURNS & SONS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

THERMALO

FOR MACHINES FOR ROASTING COFFEE; COCOA, PEANUTS, CEREALS, ETC.
Claims use since Aug. 1, 1934.

Reg. No. 323,171. Registered Apr. 2, 1935. JABEZ BURNS & SONS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

THERMALO

FOR MACHINES FOR GRINDING, CRACKING, AND OTHERWISE TREATING COFFEE AND CHAFF.
Claims use since Nov. 1, 1934.

Reg. No. 331,471. Registered Jan. 7, 1936. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

CENTREPIER

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR SEDIMENTATION APPARATUS SUCH AS THICKENERS AND CLARIFIERS.
Claims use since Aug. 14, 1935.

Reg. No. 332,009. Registered Jan. 28, 1936. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

MONORAKE

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR SEDIMENTATION APPARATUS SUCH AS CLARIFIERS AND THICKENERS, ALSO GRIT REMOVAL APPARATUS.
Claims use since July 25, 1934.

Reg. No. 332,938. Registered Mar. 3, 1936. CHICAGO WHEEL & MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Hand-ee

FOR ELECTRICALLY DRIVEN DEVICES FOR GRINDING, POLISHING AND BUFFING THE GENERAL SURFACES OF METAL, WOOD, POTTERY AND OTHER SUBSTANCES.
Claims use since Mar. 1, 1932.

Reg. No. 348,199. Registered July 20, 1937. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

ADKA

FOR APPARATUS FOR THE TREATMENT OF LIQUIDS AND LIQUID-SOLIDS MIXTURES AND MORE PARTICULARLY FOR APPARATUS OR EQUIPMENT FOR THE SEPARATION OF SOLIDS FROM LIQUIDS KNOWN AS SAVEALLS.
Claims use since Mar. 25, 1936.

Reg. No. 356,484. Registered Apr. 26, 1938. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

BIOFILTER

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS IN SEWAGE AND TRADE-WASTE SYSTEMS SUCH AS TRICKLING FILTERS, THICKENERS AND CLARIFIERS AND/OR DIGESTERS.
Claims use since Nov. 20, 1937.

Reg. No. 356,485. Registered Apr. 26, 1938. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

BIOROBIC

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS IN SEWAGE AND TRADE-WASTE SYSTEMS SUCH AS TRICKLING FILTERS, THICKENERS, AND CLARIFIERS AND/OR DIGESTERS.
Claims use since Nov. 20, 1937.

Reg. No. 356,487. Registered Apr. 26, 1938. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

CLARIGESTER

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS IN SEWAGE SYSTEMS SUCH AS THICKENERS AND CLARIFIERS AND/OR DIGESTERS.
Claims use since Nov. 15, 1937.

Reg. No. 357,892. Registered June 21, 1938. UNITED IRON WORKS, Oakland, Calif., a corporation of California. Republished by registrant.

FOR FLUID PUMPS, MINING MACHINERY—NAMELY, ROCK CRUSHERS, ORE MILLS AND HYDRAULIC NOZZLES.
Claims use since 1903.

Reg. No. 363,502. Registered Dec. 27, 1938. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

SQUAREX

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR SEDIMENTATION APPARATUS SUCH AS THICKENERS AND CLARIFIERS.
Claims use since July 25, 1938.

Reg. No. 375,846. Registered Mar. 5, 1940. SYNTRON COMPANY, Homer City, Pa., a corporation of Delaware. Republished by registrant.

VIBRA-FLOW

The word "Flow" is disclaimed apart from the mark as shown.
FOR CONVEYORS FOR MOVING POWDERED OR GRANULAR MATERIAL AND SMALL OBJECTS, AND ON FEEDER CONVEYORS, DRY FEEDER MACHINES, WEIGH FEEDER MACHINES WITH TIMED BATCH DISCHARGE AND CONTINUOUS FLOW DISCHARGE, AND GRAVIMETRIC FEEDERS EMPLOYED FOR THE DRY FEEDING OF CHEMICALS OF GRANULAR OR POWDERED MATERIAL IN WATER TREATMENT, SEWAGE DISPOSAL, AND OTHER INDUSTRIAL PROCESSES.
Claims use since on or about Jan. 17, 1937.

Reg. No. 390,978. Registered Oct. 14, 1941. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

CLARIFLOCCULATOR

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR COMBINED AGITATION AND SEDIMENTATION APPARATUS.
Claims use since May 11, 1940.

Reg. No. 395,578. Registered June 2, 1942. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

HYDRO-TREATOR

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR AGITATING AND CLARIFYING APPARATUS.
Claims use since Jan. 2, 1941.

Reg. No. 396,819. Registered Aug. 4, 1942. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

VACUATOR

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR APPARATUS OR EQUIPMENT KNOWN AS THICKENERS OR CLARIFIERS.
Claims use since June 23, 1941.

Reg. No. 400,841. Registered Apr. 6, 1943. MCCAFFREY RUDDOCK TAGLINE CORPORATION, Los Angeles, Calif., a corporation of California. Republished by registrant.

RUD-O-MATIC

FOR SPRING OPERATED MECHANISM FOR CONTROLLING THE OPERATION OF MATERIAL HANDLING EQUIPMENT.
Claims use since June 7, 1938.

Reg. No. 400,878. Registered Apr. 6, 1943. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

MULTDIGESTOR

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR SEWAGE SLUDGE TREATING SYSTEMS WHICH INCLUDE APPARATUS OR EQUIPMENT SUCH AS THICKENERS OR CLARIFIERS AND/OR DIGESTERS AS WELL AS TRAY DIGESTORS.
Claims use since Aug. 29, 1942.

Reg. No. 427,423. Registered Feb. 11, 1947. BOND FOUNDRY AND MACHINE COMPANY, Manheim, Pa., a corporation of Pennsylvania. Republished by registrant.

Bond

FOR STEEL BENCH LEGS FOR WORK BENCHES AND WORK TABLES.
Claims use since on or about Nov. 6, 1931.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 205,312. Registered Nov. 3, 1925. SUBMARINE SIGNAL CORPORATION, Wilmington, Del., and Boston, Mass. Republished by Submarine Signal Company, a corporation of Delaware.

FATHOMETER

FOR APPARATUS FOR MEASURING DISTANCES BY REFLECTED SOUND WAVES OR BY SIMILAR ACOUSTIC METHODS AND PARTICULARLY FOR APPARATUS FOR DETERMINING DEPTHS OF WATER AND SOUNDINGS.
Claims use since May 12, 1924.

Reg. No. 286,781. Registered Sept. 1, 1931. JABEZ BURNS & SONS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

THERMOMATON

FOR TEMPERATURE INDICATING DEVICES FOR ROASTING MACHINES.
Claims use since Dec. 19, 1930.

Reg. No. 327,675. Registered Sept. 3, 1935. W. F. STANLEY AND COMPANY LIMITED, London, England, a British company. Republished by registrant.

HEZZANITH

Old South

FOR FRESH ROASTED PEANUTS IN THE SHELL.
Claims use since July 1945.

Reg. No. 429,529. Registered May 6, 1947. DUBUQUE PACKING COMPANY, Dubuque, Iowa, a corporation of Iowa. Republished by registrant.

Temt

FOR CANNED PREPARED PORK MEAT.
Claims use since Jan. 1, 1945.

CLASS 47

WINES

Reg. No. 310,917. Registered Mar. 13, 1934. BERINGER BROS., INC., St. Helena, Calif., a corporation of Nevada. Republished by registrant.

LOS HERMANOS VINEYARDS

FOR WINES.
Claims use since Jan. 15, 1879.

Reg. No. 310,918. Registered Mar. 13, 1934. BERINGER BROTHERS, INC., St. Helena, Calif., a corporation of Nevada. Republished by registrant.

FOR WINES.
Claims use since Jan. 15, 1879.

Reg. No. 321,745. Registered Feb. 12, 1935. BERINGER BROS., INC., St. Helena, Calif., a corporation of California. Republished by registrant.

Mountain Ranch

FOR WINES.
Claims use since Oct. 1, 1934.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 415,025. Registered July 10, 1945. AMBROSIA BREWING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The words "Brewing Co., Chicago, Ill." are disclaimed apart from the mark as shown. The ruling in the drawing indicates the colors gold and blue.
FOR BEER.
Claims use since Sept. 1, 1944.

Reg. No. 415,069. Registered July 10, 1945. FIRST CARAMEL MALTING CORPORATION, Paterson, N. J., a corporation of New Jersey. Republished by registrant.

CARA-MALT

The word "Malt" is disclaimed apart from the mark as shown.
FOR MALT USED AS AN AID IN MAKING BEER.
Claims use since September 1944.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 316,351. Registered Aug. 21, 1934. GORDON O'NEILL CO. INC., New York, N. Y. Republished by Gordon O'Neill Company, Jersey City, N. J., a firm.

RIALTO

FOR GIN AND WHISKEY.
Claims use since May 7, 1934.

Reg. No. 389,999. Registered Sept. 2, 1941. GORDON O'NEILL CO., INC., Jersey City, N. J. Republished by Gordon O'Neill Company, Jersey City, N. J., a firm.

All notations except the word "Champlain," the name of the applicant, and the representation of the label per se are disclaimed.
FOR BRANDY.
Claims use since Dec. 31, 1940.

Reg. No. 392,907. Registered Jan. 20, 1942. GEORGE BALLANTINE & SON, LIMITED, Dumbarton, Scotland, a corporation of Great Britain. Republished by registrant.

FOR WHISKY.
Claims use since Sept. 30, 1938.

Reg. No. 411,825. Registered Feb. 6, 1945. RON VIRGIN COMPANY, LTD., Cambridge, Mass. Republished by Ron Virgin Company, Ltd., Cambridge, Mass., a corporation of Massachusetts.

Tovarich

FOR VODKA.
Claims use since Mar. 13, 1943.

Reg. No. 428,122. Registered Mar. 11, 1947. GLENMORE DISTILLERIES COMPANY, Louisville and Owensboro, Ky., a corporation of Delaware. Republished by registrant.

FOR WHISKEY.
Claims use since Dec. 31, 1938.

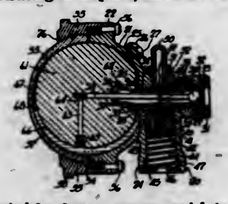
CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 239,760. Registered Mar. 13, 1928. ROYAL ELECTROTYPE COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ROYALTYPES

The portion of the mark "Types" is disclaimed except in connection with the part "Royal" apart from the mark as shown.
FOR ELECTROTYPES.
Claims use since Oct. 13, 1926.



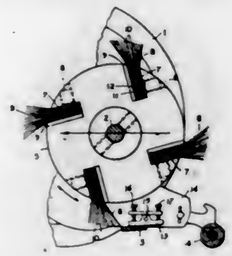
REISSUES

SEPTEMBER 14, 1948

23,038
FLIGHT POSITION AND FORCE INDICATING INSTRUMENT
Arthur Z. Bendar, Burbank, Calif.
Original No. 2,320,505, dated June 1, 1943, Serial No. 394,967, May 24, 1941. Application for reissue November 18, 1944, Serial No. 564,076
26 Claims. (Cl. 264—1)

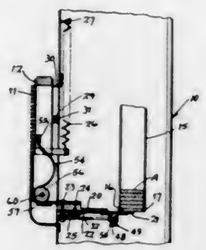
5. An aircraft instrument comprising a housing having a chamber therein defined in part by a transparent member, a buoyant member shiftable in said chamber, a weight separate from the buoyant member shiftable in said housing and connected with said buoyant member to shift said member, a spring normally counterbalancing said weight, and two liquids of contrasting appearance and different specific gravities filling the space in said chamber around said buoyant member.

20. An aircraft instrument comprising a mounting, a self-leveling instrumentality shiftable in said mounting about a center point by gravity including a liquid, means exerting a cen-



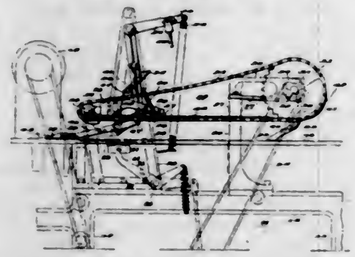
trifugal variable force upon said instrumentality to displace said liquid and shift said center point in said mounting, and means exerting a substantially constant normally counterbalancing force upon said first-named means.

PATENTS



GRANTED SEPTEMBER 14, 1948

2,449,042
TRIMMING MACHINE
Hermann R. Abbrecht, Shaker Heights, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application August 14, 1944, Serial No. 549,363
1 Claim. (Cl. 56—249)

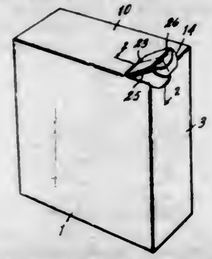


In a trimming machine, the combination of an elongated cutter bar and a plurality of brush strips mounted for rotation about a common axis parallel with said bar, said strips having faces of substantial width disposed to pass in close shearing contact with the cutting edge of said bar upon being rotated and to cooperate therewith in cutting engagement, said faces being helically disposed in relation to such axis.

2,449,043
SAFETY TRANSMISSION FOR VENDING MACHINES AND THE LIKE
Otto Altman, Port Chester, N. Y.
Application September 20, 1946, Serial No. 698,276
5 Claims. (Cl. 74—470)

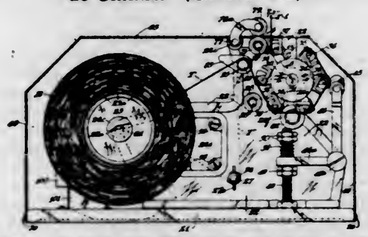
1. A safety transmission for vending machines and the like, comprising a movable member, means for holding said member substantially immovable at times, a depressible plunger, and an elastic member connecting said plunger and movable member and having sufficient stiffness to move said movable member when said plunger is depressed and having a portion extending substantially in the direction of motion of said plunger and adapted to buckle when said movable member is immovable and said plunger is depressed.

2,449,044
BLANK FEEDER MEANS
Gustave A. Anderson, New York, N. Y., assignor to The International Handkerchief Mfg. Co., New York, N. Y., a corporation of New York
Application January 28, 1946, Serial No. 643,880
9 Claims. (Cl. 112—203)



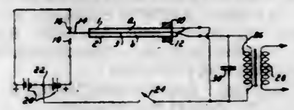
1. In a handkerchief making machine, apparatus for advancing blanks toward sewing machines which simultaneously sew their side edges into hems, the forward and rear edges of the blanks having been previously hemmed, said advancing apparatus comprising, support means for the side edges of a blank, endless chain means disposed above said support means, said chain means carrying gripping means for successively engaging handkerchief blanks when said chain means is actuated, and for moving said blanks on said support means to a point adjacent the presser feet of the sewing machines, and auxiliary feeder means having an element for engaging the inner edge of the forward hem of a handkerchief blank moved to said point for moving the blank the remainder of the distance to a point where the side edges of the blank are positioned beneath the presser feet of the sewing machines.

2,449,045
EXPANSIBLE FISHHOOK
Francis P. Athans, Fort Worth, Tex.
Application January 17, 1947, Serial No. 722,539
2 Claims. (Cl. 43—36)



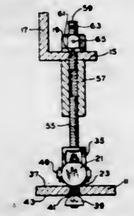
1. A fish hook comprised of a pair of shanks having hooks at corresponding ends thereof and including a spring therebetween for normally diverging the same, and a lateral bend in one of said shanks for engaging the other of said shanks when said hooks are in their expanded position, and a smaller lateral bend on the first named bend for detachably engaging the other of said shanks.

2,449,046
DISPENSING CONTAINER
Wilbur L. Barnes and James J. Harrison, Battle Creek, Mich., assignors to Michigan Carton Company, Battle Creek, Mich., a corporation of Michigan
Application May 9, 1946, Serial No. 668,340
6 Claims. (Cl. 229—17)



4. A dispensing container comprising walls provided with overlapping inner, outer and intermediate closure flaps adhesively secured together, the inner flap having a tucking tongue on one end thereof disposed within the container when the closure flaps are closed and constituting a pouring opening closure tucking flap, the inner closure flap and the other overlapping closure flaps having adhesively connected break-out sections for providing a pouring opening and a closure therefor, the break-out sections being defined by substantially aligned scores, the wall from which the intermediate flap extends having a fracturing score extending across the break-out section of the intermediate flap, the outer flap having a hinging score at its inner end, the other scores being fracturing scores, said hinging score of the outer flap constituting the sole hinge means for the closure for the pouring opening.

2,449,047
AUTOMATIC ADHESIVE TAPE DISPENSER
Arthur A. Anderson, Rose Township, Ramsey County, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application June 27, 1941, Serial No. 400,143
18 Claims. (Cl. 164—68)



1. In a device for dispensing tape, means for holding a supply roll of tape, a cutter wheel adapted to receive tape from the roll and an anvil member adjacent to said cutter wheel, said cutter wheel having tape-gripping means positioned thereon adapted to contact a portion of the tape, severing means on said wheel positioned in such a manner that the tape passes over said severing means when it is trained around the wheel, the said wheel being positioned so as to press the severing means against the anvil member as the wheel rotates, thereby severing the tape with the severed portion still held by the tape-gripping means.

2,449,048
DEVICE FOR TRANSFORMING DIRECT CURRENT INTO ALTERNATING CURRENT OR VICE VERSA
Palle Niels Bendixen, Copenhagen, Denmark
Application February 8, 1946, Serial No. 646,387
In Denmark February 18, 1944
3 Claims. (Cl. 175—363)

1. A device of the kind referred to, comprising a pair of opposed contacts, a contact member for alternatingly co-operating with said contacts, a piezo-electric crystal element composed of a pair of crystal members connected together, said crystal element carrying said contact member, an intermediate electrode disposed between said crystal members, outer electrodes disposed on the outer faces of said crystal members, and means controlled by said contact member and pair of contacts for imposing alternating voltage on said intermediate electrode and said outer electrodes.

2,449,049
ADJUSTABLE SUPPORT
Eric A. Black, Red Bank, N. J.
Application March 9, 1945, Serial No. 581,816
7 Claims. (Cl. 248—361)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An adjustable support for a load comprising two substantially flat, parallel, spaced, bearing surfaces, facing away from each other; two roller members; each such member being provided with a curved rolling surface in substantially rollable contact with one of said bearing surfaces, the axes of said rolling surfaces being parallel to each other and to the bearing surfaces; means to hold said roller members in substantially fixed spaced disposition relative to each other; a leg member; the proximal extremity of said leg member being pivotably secured to one of said roller members, the pivoting axis being substantially perpendicular to the axes of the rolling surfaces; and means on the distal extremity of the leg member receivable to a load.

2,449,050
CATALYTIC CONVERSION OF HYDROCARBONS WITH A CERIUM PHOSPHATE CATALYST
George R. Bond, Jr., Paulsboro, N. J., and George Alexander Mills, Ridley Park, Pa., assignors to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 1, 1946, Serial No. 651,426
5 Claims. (Cl. 196—52)

1. In the catalytic production of valuable hydrocarbon materials, the process which comprises

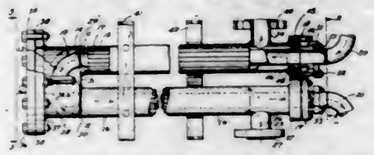
subjecting a hydrocarbon oil under catalytic cracking conditions to contact with a catalyst comprising a cerium phosphate as the principal catalytically active component present therein.

2,449,051

LIQUID PHASE REFINING OF PETROLEUM HYDROCARBON PRODUCTS

Ferdinand W. Breth and Anthony Kinsel, Petrolia, Pa., assignors to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application March 8, 1946, Serial No. 653,128
13 Claims. (Cl. 196—147)



1. In the method of refining petroleum hydrocarbons, the improvement which comprises subjecting a mass of particled petroleum hydrocarbon refining mineral adsorbent to vibration for a period sufficient to obtain an over-all volume reduction of said mass of adsorbent of at least approximately 5% and thereafter filtering a petroleum hydrocarbon in liquid phase through the said volume reduced adsorbent thus vibrated.

2,449,052

HEAT EXCHANGER

John W. Brown, Jr., Lakewood, Ohio, assignor to Brown Fintube Company, Elyria, Ohio, a corporation of Ohio

Application January 13, 1945, Serial No. 572,627
4 Claims. (Cl. 285—20)

1. In a heat exchanger embodying an outer tube and an inner tube adapted to join a connecting pipe, means for connecting the inner tube to such a pipe and to the outer tube comprising an outwardly facing shoulder near the end of the outer tube, an enlarged end on the inner tube having a maximum diameter less than the minimum diameter of the outer tube and providing an inwardly facing shoulder near the end of the inner tube, interlocking means adapted to engage between the shoulder of the outer tube and the shoulder of the inner tube for limiting inward movement of the inner tube in the outer tube, a sealing surface adjacent one end of the outer tube, a sealing surface on the enlarged end of the inner tube, a sealing ring adapted to seal against the sealing surfaces of both said tubes, said connecting pipe having a sealing surface adjacent one end thereof, means connected to said outer tube for drawing said sealing ring simultaneously against said inner and outer tube sealing surfaces, and means connected to said outer tube for drawing the connecting pipe into sealing engagement with the inner tube.

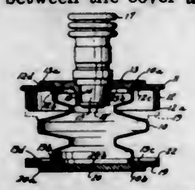
2,449,053

LEAK DETECTOR

Henry L. Burns, Yellow Springs, Ohio, and James H. Thomas, Minneapolis, Minn.

Application November 28, 1944, Serial No. 565,560
4 Claims. (Cl. 73—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A leak detector for a demand type mask provided with an inlet hose and a male hose-coupling on said hose, said detector comprising a casing having an opening in the top thereof, a cap covering the said opening and having a female fitting thereon adapted to receive the said male hose-coupling, a bottom cover for the said casing having an opening in the bottom thereof, a closure plate covering the said opening in the cover, a bellows having its opposite ends disposed in the openings respectively of the casing and the cover and engaged between the casing and the cap at one end and between the cover and the closure



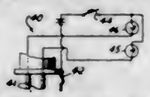


plate at the other end, the female fitting on the cap opening into the said bellows and the said cap and closure plate being secured to the casing and cover respectively to clamp the ends of the bellows therebetween and provide a leaktight enclosure except for the opening in the female fitting, and means to secure the male hose-coupling in the said opening in the female fitting so that the hose connects with the interior of the bellows and provides the only inlet and outlet for the flow of air into and out of the said bellows.

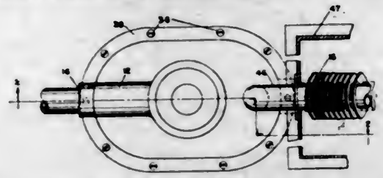
2,449,054

FLUID MASS MEASURING DEVICE

John H. Cantlin, North Andover, Mass.

Application July 21, 1945, Serial No. 606,461
4 Claims. (Cl. 177—311)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a fluid-containing cylinder adapted to confine a quantity of fluid under pressure, said fluid being capable of existing in a gaseous state, in a liquid state or in both gaseous and liquid states within the cylinder at varying ambient temperatures, apparatus for determining an approximation of the total weight of fluid within the cylinder comprising, a buoyant member within the cylinder and having a length coextensive with and substantially equal to the height of free fluid space in the cylinder, means to limit the buoyant member to movements in the direction of its length, indicating means to give definite responses to the buoyant force acting on the buoyant member for indication of at least two different and predetermined weights of fluid within the cylinder, said indicating means including a plurality of electrical contacts contained within the cylinder, and one of said contacts being carried on the buoyant member and being yieldable under increase of said buoyant force above a predetermined value.



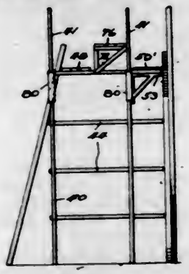
2,449,055

FLASH STEAM ELIMINATOR

Clifford C. Carson, Washington, D. C.

Application September 7, 1945, Serial No. 615,063
8 Claims. (Cl. 237—68)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. Apparatus for removing at its source flash steam from steam and condensate conducting lines of a heating system comprising a pair of interconnected high and low pressure chambers, an inlet for providing passage of said heating system exhaust steam and condensate into said high pressure chamber, a trap within said high pressure chamber for trapping and condensing steam flowing therein, valve means for permitting flow of condensate from said high to said low pressure chamber, a heat exchanger for receiving



flash steam from and for returning the resulting condensate to said low pressure chamber, an outlet for permitting the return to said system of the condensate received in said low pressure chamber and a separate passage from said inlet to said outlet including a thermostatic valve through which air entrapped in the lines of the system may flow to bypass both the high and the low pressure chambers.

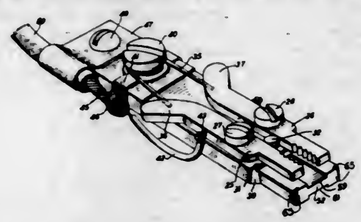
2,449,056

SAFETY SCAFFOLD POLE

Howard H. Clark, Kent, Ohio

Original application June 15, 1942, Serial No. 447,113. Divided and this application July 11, 1945, Serial No. 604,469
18 Claims. (Cl. 304—37)

1. Scaffolding comprising superposable uprights each including a pair of spaced parallel side bars, spacers located at intervals between said side bars and secured thereto, and means for maintaining superposed uprights in alinement comprising complementary stepped ends on said uprights including a spacer at the joint between said uprights, a channel bar secured to the inner face of one of said side bars in position to embrace the spacer, and removable securing means extending transversely of the joint.



2,449,057

ELECTRICAL TESTING DEVICE

Francis W. Clayden, Bronxville, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application April 14, 1945, Serial No. 588,400
8 Claims. (Cl. 173—324)

1. A tool for testing the conductivity of terminals in layers in a bank comprising a pair of jaws, a guide member attached thereto for insertion between two adjacent layers of terminals, and paired projections on said member to engage the edges of terminals in said two adjacent layers

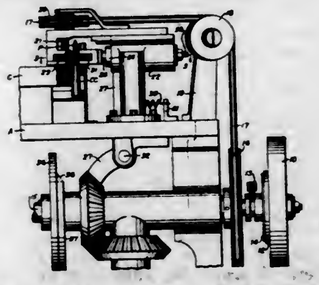
to guide said jaws to engage accurately a terminal in another layer.

2,449,058

PLASTICIZING AND VULCANIZATION OF BUTADIENE-ACRYLIC NITRILE COPOLYMER

Loring Coes, Jr., Brookfield, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

No Drawing. Application December 27, 1945, Serial No. 637,490
6 Claims. (Cl. 51—298)

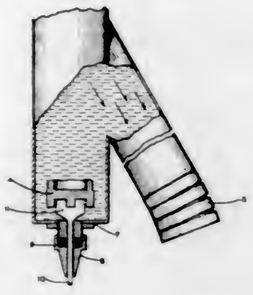


1. The method of curing butadiene-acrylic nitrile copolymer which comprises preparing a mix of said copolymer, an ester of an alcohol containing from two to six carbon atoms selected from the group consisting of the alkyl, alkoxy alkyl, hydroxy alkyl, alicyclic, benzyl and furfuryl alcohols and a dicarboxylic acid containing from two to ten carbon atoms, and a catalyst which is non-acidic at temperatures below room temperature but which provides acid selected from the group consisting of hydrochloric acid, sulphamic acid and toluene sulphonic acid at temperatures of 100° C. and above and which acid catalyst is solid at room temperature, the combination of said ester and the acid catalyst being the sole curing agent, and after a thorough mixing of the above heating to a temperature of at least 100° C. thereby producing a cured rubber-like copolymer.

2,449,059

BULLET LOOSENING IMPROVEMENTS IN CARTRIDGE DISASSEMBLING MACHINES

Frank E. Costello, Philadelphia, Pa.

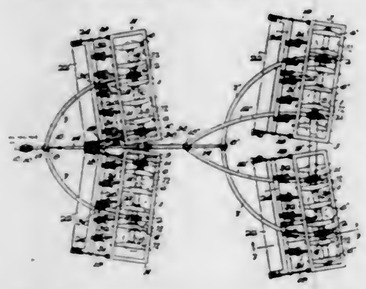


Application September 3, 1946, Serial No. 694,442
3 Claims. (Cl. 86—1.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a machine for removing a frangible bullet from the cartridge case on which the bullet is

carried, means for loosening the bullet in the neck of the cartridge case, including, a pair of rollers separated by a sufficient space to allow the rollers to bear on the neck of the cartridge case, one of said rollers being slidably mounted, and a spring stressing said slidably mounted roller into yielding engagement with the neck of the cartridge case.

2,449,060
FLUID DRAINING DEVICE
Herbert D. Daigle, Providence, R. I.
Application August 1, 1945, Serial No. 608,336
1 Claim. (Cl. 222—566)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

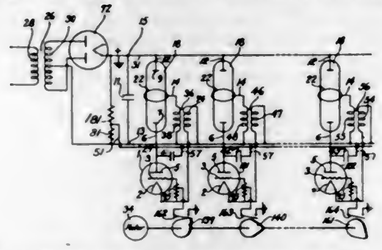


A draining device adapted to be detachably associated with a container to be drained of its fluid contents through a removable drain plug, said draining device comprising a substantially cylindrical body member provided with an open intake end, said body member when in operative position having said open intake end in engaging contact with an area of said container surrounding said drain plug, a base plate secured to and closing said body member opposite said open intake end, a drain plug extracting means, said extracting means comprising means within said body member for gripping said drain plug, a guide rod extending through a fluid seal opening in said base plate, said gripping means being secured to an end of said guide rod, said guide rod and said gripping means being movable with respect to said body member independently in rotary and longitudinal directions, the end of said guide rod opposite said gripping means providing means for imparting movement to said guide rod, said gripping means when moved longitudinally towards said intake end becoming positioned to engage said drain plug to permit its extraction from said container by rotation thereof, said drain plug after extraction being retained by said gripping means, a fluid discharge conduit attached and opening into said body member, said body member extending from its intersection with said discharge conduit and providing a trap extending to said base plate, said trap being adapted to retain said gripping means and said drain plug during the draining of said container through said discharge conduit upon longitudinal movement of said guide rod away from said open end, the depth of said trap from said intersection to said base plate being greater than the combined longitudinal thickness of said gripping means and said drain plug whereby said trap precludes loss of said drain plug through said discharge conduit.

2,449,061
CONVERSION OF HYDROCARBONS IN THE PRESENCE OF A CATALYST COMPRISING ALUMINA AND AN OXYFLUORIDE OF BERYLLIUM, TITANIUM, OR ZIRCONIUM
Samuel M. Darling, Cleveland, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application August 21, 1946, Serial No. 692,125
4 Claims. (Cl. 196—52)

1. A method of converting higher boiling hydrocarbon to lower boiling products which comprises subjecting said hydrocarbon to cracking conditions of temperature and pressure in the presence of a catalyst comprising alumina to which has been added a separately formed metal oxyfluoride of the group consisting of beryllium oxyfluoride, titanium oxyfluoride, and zirconium oxyfluoride as the essential and primary promoter.

2,449,062
AGRICULTURAL MACHINE
Edward Bradley Dewey, Washington, D. C.
Original application February 3, 1944, Serial No. 520,940. Divided and this application August 19, 1944, Serial No. 550,265
4 Claims. (Cl. 55—12)

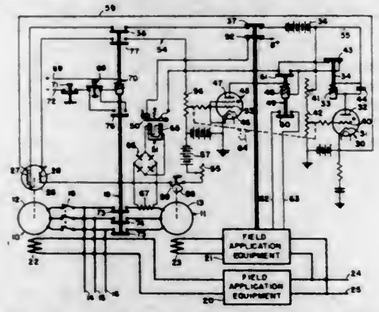


1. An agricultural machine comprising frames disposed end to end; connecting means pivotally connecting the inner ends of the frames together; means for shifting the frames into and out of axial alignment transversely of the direction of pull; adjustable axle sections carried by the frames respectively and disposed substantially end to end transversely of the direction of pull; opposed series of spaced concavo-convex ground engaging discs carried by the axle sections respectively; a series of spaced cutting wheels carried by each frame in advance of the discs and disposed transversely of the direction of pull; means carried by each frame in advance of the cutting wheels for rolling the ground surface; and means for yieldably urging the rolling means and cutting wheels into contact with the ground.

2,449,063
ELECTRIC SYSTEM
Harold E. Edgerton, Belmont, Mass.
Application November 19, 1943, Serial No. 510,984
17 Claims. (Cl. 177—329)

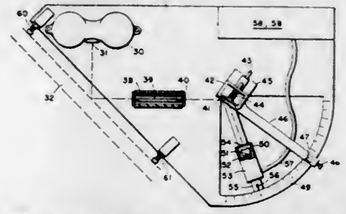
1. A flash-producing system having, in combination, a plurality of flash-lamps each provided with a cathode, an anode and a control electrode, each flash-lamp being provided with a transformer for energizing the corresponding control electrode, a condenser for discharging through the flash-lamps between the anodes and the cathodes thereof to cause the flash-lamps to flash,

means for charging the condenser before each discharge, and a motor-driven switch for energizing the transformers in succession to energize



the corresponding control electrodes in succession, thereby to discharge the condenser through the flash-lamps in succession.

2,449,064
METHOD OF FERMENTING WHEY
Emmet R. Engel, Berwyn, Ill.
No Drawing. Application January 10, 1945, Serial No. 572,243
10 Claims. (Cl. 99—35)

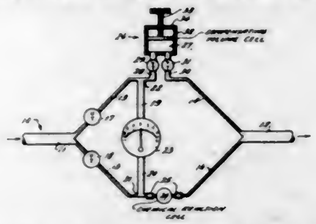


1. A method of making a whey product which consists in preparing a yeast culture of whey, sugar and yeast; mixing whey, sugar and the culture together; maintaining the mixture at 58–72° F. for about three days; maintaining the mixture at 50–66° F. for about six days and decanting the liquid; maintaining at 45–50° F. for ten to forty-four days, depending upon the flavor desired, and decanting the liquid; maintaining at a freezing temperature long enough to concentrate the liquid to a desired proof and to fix the flavor selected in the previous step; subjecting to an initial stabilization period at about 50° F. until marked ebullition occurs and subsides accompanied by a rise in temperature, followed by decanting the liquid; and subjecting to a final stabilization period at 45–50° F. for a period, the end of which is characterized by marked effervescence.

2,449,065
CONTROL SYSTEM FOR SYNCHRONOUS MOTORS
Leonard Freinkel, Washington, D. C.
Application March 12, 1946, Serial No. 653,920
6 Claims. (Cl. 318—41)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

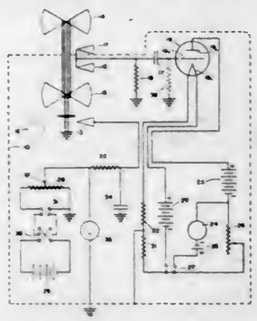
1. In a control system for synchronous motors, an alternating current source, a first synchronous motor having armature and field windings, means connecting the armature winding to said alternating current source, means connecting the field winding to a direct current source, a second synchronous motor having armature and field windings, means connecting the armature winding of said second motor to said alternating current source, field application equipment for connecting the field winding of said second motor to a direct current source, an electric discharge device having an anode circuit adapted upon the flow of anode current therethrough to actuate said field application equipment, a source of current for said anode circuit, means rendering said discharge device conductive of said anode current upon disposition of the rotary member of said second motor in a predetermined angular rotational position simultaneously with disposition of the rotary member of said first motor in any one of a plurality of predetermined angular rotational positions, and means interrupting the anode circuit during a portion of each revolution of the rotary member of said first motor to prevent the flow of anode current while the rotary member of said first motor is disposed in some but not all of said plurality of angular rotational positions.

2,449,066
ANALYSIS BY FLUORESCENT X-RAY EXCITATION
Herbert Friedman, Arlington, Va.
Application July 19, 1946, Serial No. 684,908
9 Claims. (Cl. 250—71)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



6. The method of quantitatively analyzing a material for an element or elements therein, comprising, exposing a specimen of said material to a beam of X-rays of a wavelength which excites the fluorescent X-ray spectrum of at least one of the elements of said specimen, monochromatizing a beam of said fluorescent radiation by reflection from a crystal, measuring the intensity of the reflected radiation by electronic counting, transforming the counter impulses into a sensible indication, comparing the intensity of said beam with the intensity of a like beam obtained in like manner from a material of known composition thereby to obtain an indication of the composition of the unknown specimen.

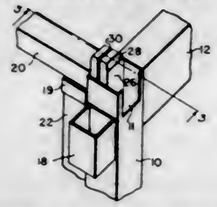
2,449,067
CONSTANT FLOW GAS ANALYZER
Victor Guillemin, Jr., Dayton, Ohio
Application July 29, 1946, Serial No. 686,834
3 Claims. (Cl. 73—23)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A fluid analyzing apparatus comprising, a fluid conduit divided into two flow passages in a portion thereof, each of said flow passages being divided into first and second flow tubes through which fluid is adapted to flow successively, said conduit having a means operatively associated with one of said flow passages for producing a

change of flow resistance in said second flow tube of said one flow passage, a manually adjustable volume compensating means in the other flow passage for equalizing the volume in the said second flow tube of said other flow passage with the volume in the said second flow tube of the said one flow passage including the said first mentioned means to prevent sudden surges of

fluid flowing through said fluid conduit from altering the proportional flow in said two flow passages, and a pressure responsive indicating means connecting the two said flow passages at the junction respectively of the said first and second flow tubes for indicating the pressure differential between said flow passages resulting from a change of flow resistance upon operation of said first mentioned means.



2,449,068
ELECTRIC FIELD OR POTENTIAL INDICATOR
Ross Gunn, Washington, D. C.
Application August 28, 1944, Serial No. 551,595
8 Claims. (Cl. 171—95)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

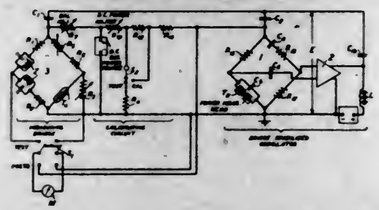
7. The method of measuring an unknown electrostatic field with two field sensitive elements comprising periodically exposing one sensitive element to the unknown field to generate a periodic electrical signal, synchronously exposing the other sensitive element to another and known field periodically to generate another periodic electrical signal, combining the signals, and amplifying and indicating the combined signals.

2,449,069
SECTIONAL SCAFFOLD
Hugh Adam Harrison, Waterloo, Iowa
Application November 21, 1946, Serial No. 711,256
12 Claims. (Cl. 304—2)

4. A disconnectible joint for use in assembling the structural elements of a sectional scaffold comprising, a vertical tubular standard of rectangular cross section having an open top provided with rectangular notches in a pair of its opposite side walls, vertically disposed sockets attached to opposite side walls of said standard below said notches, a pair of frames having vertical members engageable in said sockets and horizontal beams engageable in said notches, and vertical, tapered, split studs attached to the ends of said beams and adapted to be partially received

within the open top of said standard, each of said studs being approximately one-half the internal width of said standard whereby the latter may accommodate a pair of studs of adjacent frames and including portions adapted to extend exteriorly and upwardly from said standard to receive the open bottom portion of an adjacent standard.

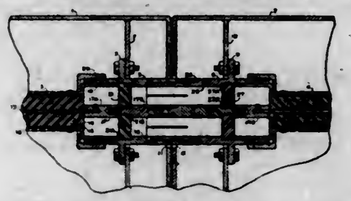
2,449,070
PROTECTIVE COATING FOR USE IN MANICURING
Ethel Hauser, St. Louis, and Peter Kovol, Maplewood, Mo.; said Kovol assignor to said Hauser
No Drawing. Application May 22, 1947, Serial No. 749,870
6 Claims. (Cl. 167—85)



2. A flowable composition for applying to the fingers prior to applying nail polish to bound the nail and define a nail polish receiving area thereof; the composition consisting essentially of a waxy material, a cellulose derivative and a volatile solvent therefor, and a compatible softener plasticizing the waxy material; the waxy material and compatible softener together constituting the major quantity of non-volatile ingredients, and the composition having the property of forming a substantially non-drying film impenetrable to nail polish.

2,449,071
CATALYST FOR THE SYNTHESIS OF HYDROCARBONS
Charles O. Hawk, Norma R. Stern, and Lawrence J. E. Hofer, Pittsburgh, Pa., assignors to the United States of America, as represented by the Secretary of the Interior
No Drawing. Application November 7, 1945, Serial No. 627,271
12 Claims. (Cl. 260—449.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A catalyst for the synthesis of liquid and solid hydrocarbons from hydrogen and carbon monoxide consisting essentially of the reduction products of a mixture of precipitated ferric oxides in which from one to sixty percent by weight is in the meta form, the balance of said oxides being essentially in the ortho form.



3. In a process for the production of liquid and solid hydrocarbons from hydrogen and carbon monoxide, the step of reacting a mixture of hydrogen and carbon monoxide at an elevated temperature and pressure in the presence of an iron oxide catalyst comprising a mixture of ortho- and meta-ferric oxides containing from one to sixty percent of the meta form and from ninety-nine to forty percent of the ortho form.

2,449,072
WATTMETER CIRCUIT
Edward W. Houghton, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 28, 1947, Serial No. 737,948
17 Claims. (Cl. 171—95)

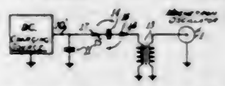
1. A high frequency power measuring circuit comprising in combination a bridge network having four arms, one of which arms includes a thermistor, means for applying the high frequency power to be measured to said thermistor to tend to change its temperature and consequently its resistance, a separate source of variable power connected to said bridge adapted to automatically supply variable power thereto to maintain it in substantial balance irrespective of conditions tending to change the temperature and resistance of the thermistor, an indicating bridge also having four arms connected to said source of power and including an indicating instrument across a diagonal thereof for indicating a change in power supplied by the power source to the first bridge, a thermistor also included in one arm of the indicating bridge and a variable impedance connected in circuit with the last-named thermistor to adjust the power it receives from said variable power source, whereby said last-named thermistor may be made to render the indicating bridge insensitive to ambient temperature variations and sensitive only to any high frequency power applied to the first-named thermistor.

2,449,073
COAXIAL LINE CONNECTOR
John D. Johannesen, United States Navy
Application August 6, 1945, Serial No. 609,313
3 Claims. (Cl. 174—21)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A quick detachable coaxial line fitting comprising, an outer cylindrical conductor, an inner cylindrical conductor disposed coaxially with said outer conductor, said outer and said inner conductor having respective characteristic inner and outer diameters such that, with air as the separating medium, an uninterrupted characteristic impedance is provided, said outer conductor comprising a principal female socket part and a principal male plug part, said socket part being slidably engageable in such a manner with said male plug part that said plug and socket parts are disposed one within the other for a portion of their lengths in the engaged condition, said socket part being provided at its engaging end with an internal chamfer to facilitate the engagement of said plug and socket parts, said socket part also being provided with an internally recessed portion over the length of its engagement with said plug part, said plug part being provided with a wall thickness over the length of its engagement with said socket part such as to result in a substantial continuity of said outer conductor characteristic inner diameter, said inner conductor comprising a principal female socket part and a principal male plug part, said socket part being slidably engageable in such a manner with said male plug part of said inner conductor that last said plug and socket parts are disposed one within the other for a portion of their lengths in the engaged condition, last said plug part and last said socket part each being associated in fixed relationship with one of the said principal parts of said outer conductor and having lengths such that partial engagement of said principal parts of said outer conductor may be achieved without contact between said principal parts of said inner conductor, last said plug part and last said socket part being provided with respective outer and inner diameters for the length of their engagement such as to result in substantial continuity of said inner conductor characteristic outer diameter in the fully engaged condition of said inner and outer conductors, last said socket part also being provided at its engaging end with an internal chamfer to facilitate the engagement of last said plug and socket parts, said plug and socket parts of said outer conductor each also being provided with an internal annular recess located beyond the engaging portions of last said plug and socket parts, said plug and socket parts of said inner conductor each also being provided with an external recess located opposite the said internal recess in the corresponding part of said outer conductor, two dielectric discs each fitted into one pair of said opposing recesses so as to provide, in the recessed regions, an impedance equal to said characteristic impedance and so as to maintain said fixed relationship between said parts of said inner and outer conductors, means for connecting the non-engaging ends of said outer conductor to the outer conductors of coaxial transmission lines, and means for connecting the non-engaging ends of said inner conductor to the inner conductors of said coaxial transmission lines.

2,449,074
LATCHING DEVICE
Edward M. Kealy, Long Beach, Calif.
Application August 11, 1945, Serial No. 610,377
7 Claims. (Cl. 292—6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

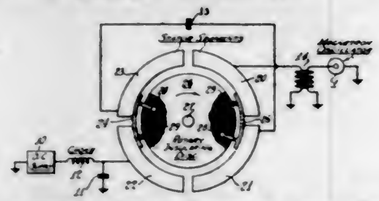
7. In a latch of the character described, a support member having a plunger receiving opening and cam slots formed therein, a plunger element positioned in the opening provided therefor, a swivel pin member articulatedly connected to the plunger and movable in the cam slots to translate reciprocal motion of the plunger into gyratory motion of the swivel pin, latch bolt means articulatedly connected to said swivel pin member and spring means for resisting motion of said plunger element and swivel pin linkage.



2,449,075
NONMAGNETIC ARMOR
Irvin R. Kramer, Washington, D. C.
No Drawing. Application January 23, 1945, Serial No. 574,183
1 Claim. (Cl. 148—31)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

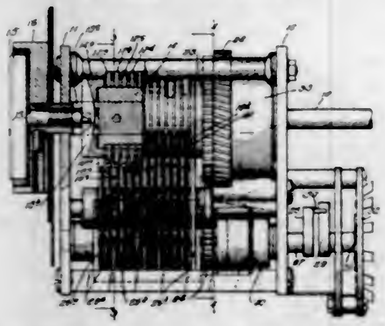
A hard, ductile, non-magnetic steel armor plate consisting substantially of 11 percent manganese, 2.5 percent nickel, 0.60 percent silicon, and 0.90 percent carbon, the balance being iron and small quantities of residual elements commonly occurring as impurities in steel, made by the method, comprising cold-rolling the austenitic plate to a hardness of 363 Brinnell and heating the cold-rolled plate at a temperature of 450° C. to relieve internal stresses.

2,449,076
PROCESS OF EXTRACTING ANTIDIABETIC SUBSTANCE FROM PANCREAS
Carl Ludwig Lantenschläger and Fritz Lindner, Frankfort-on-the-Main, Germany; vested in the Attorney General of the United States
No Drawing. Application March 25, 1943, Serial No. 480,595. In Germany January 29, 1938
1 Claim. (Cl. 167—75)



The process which comprises extracting the pancreas with a mixture of alcohol and hydrochloric acid at a temperature ranging from freezing to 15° C., separating the liquid extract from the remaining solid, adding ammonia to the liquid extract until the pH of the liquid extract is about 7.5, whereby a precipitate forms in the mother liquid, immediately separating such precipitate from the mother liquid by rapid centrifugating, immediately adjusting the pH of the liquid to about 3, concentrating said liquid by distillation under reduced pressure, adding to the concentrated liquid a solution of sodium chloride to cause the formation of a precipitate, separating the precipitate, dissolving the same in water, treating the resulting solution with a weaker solution of sodium chloride than that previously employed to produce a precipitate, dissolving said precipitate in water adjusting the solution to a pH value between about 6 and 8 and isolating the precipitate thus formed.

2,449,077
POWER CONVERTER
Nils E. Lindenblad, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 27, 1943, Serial No. 473,677
13 Claims. (Cl. 175—363)



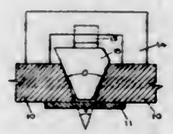
1. Apparatus for converting direct current power to periodically repeated spaced pulses of short duration, comprising a condenser having in electrical parallel relation thereto the series circuit of another condenser and an inductance coil, one of said condensers having a capacity which is at least several times larger than the other, a source of direct current charging voltage connected across said condenser of larger capacity, and means for periodically reversing the connections of the smaller of the two condensers relative to the larger condenser and the inductance coil, and a load coupled to said inductance coil.

2,449,078
COMMUTATOR APPARATUS
Nils E. Lindenblad, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 15, 1943, Serial No. 479,220
5 Claims. (Cl. 200—26)

1. In apparatus for converting direct current power to higher voltage unidirectional current pulses, a commutator comprising four equal length arcuate-shaped stator segments or bars of metallic material arranged on a circle, or integral multiples thereof, said segments being insulatingly spaced from one another by equal length air gaps, a pair of similarly dimensioned arcuate-shaped spaced brushes which are shorter than said stator segments and mounted on a rotatable insulating support whose axis of rotation is the center of said circle, said brushes being adapted to slide over those circumferential surfaces of the stator segments which face toward the center of said circle, said brushes being movable in a radial direction in the space between the insulating support and the interior surfaces of said stator segments, whereby the centrifugal force engendered by rotation of said support causes the brushes to move outwardly and assure electrical contact with said stator segments, each brush having a length of contact surface sufficient to bridge one of said gaps, said brushes being so spaced on said support that they bridge the gaps between different pairs of stator segments, a motor continuously driving said rotatable support, and electrical circuit connections to all of said stator segments.

2,449,079
TUNING DEVICE RATCHET
Richard W. May, Cedar Rapids, Iowa, assignor to Collins Radio Company, a corporation of Iowa
Application January 7, 1944, Serial No. 517,408
8 Claims. (Cl. 74—10)

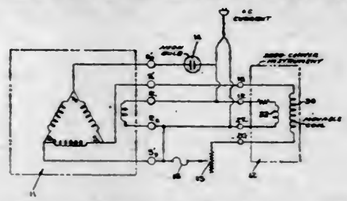
1. In apparatus for automatically positioning a shaft and having driving means so arranged that the shaft is first rotated in one direction until stopped at a terminal position, and then rotated in the other direcion until stopped at a preselected position, the selection being effected by a rotatable member adapted to be driven in only one direction, means for connecting the driving means and rotatable member, including: a rotatable driving part; a rotatable driven part, said parts having coaxial cylindrical surfaces; and frictionally operative means instantly providing driving connection between said parts upon rotation of the driving part in the first mentioned direction, this means comprising a helical spring at least partially wrapped around each of said surfaces.



2,449,080
COMPOSITION FOR CONTROL OF POULTRY COCCIDIOSIS
Orley J. Mayfield, Neal F. Morehouse, and Arthur W. Walde, Charles City, Iowa, assignors to Dr. Salsbury's Laboratories, a corporation of Iowa
No Drawing. Application December 6, 1940, Serial No. 368,912
12 Claims. (Cl. 167—53.1)

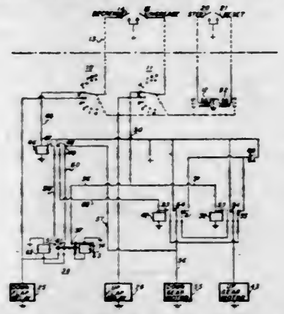
9. A composition for the control of coccidiosis in poultry by oral administration comprising a vehicle adapted for oral ingestion containing a substance from the group consisting of phenylarsonic acid, p-hydroxy phenylarsonic acid and water soluble salts thereof, in the approximate concentration range of 0.2% to 0.025%.

2,449,081
COMPOSITION FOR CONTROL OF POULTRY COCCIDIOSIS
Orley J. Mayfield, Neal F. Morehouse, and Arthur W. Walde, Charles City, Iowa, assignors to Dr. Salsbury's Laboratories, a corporation of Iowa
No Drawing. Application July 3, 1942, Serial No. 449,672
15 Claims. (Cl. 167—53.1)



12. A composition for the control of coccidiosis in poultry containing a water soluble salt of p-hydroxy phenyl arsonic acid in the approximate concentration range of 0.023% to 0.061%.

2,449,082
METHOD OF PREVENTING DISTORTION IN BUTT-WELDED PLATES
Louis P. McCabe, Hollis, N. Y.
Application April 5, 1946, Serial No. 659,740
4 Claims. (Cl. 113—112)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



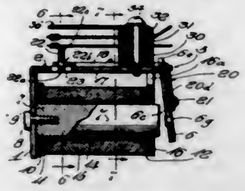
3. A method for preventing distortion of plates during the welding thereof comprising the steps of bevelling the facing surfaces to be welded so that said surfaces subtend an angle between 15° and 45°, and prior to the welding process, interposing against said opposing bevelled faces a wedge whose subtended angle is greater by 3° to 5° than the angle subtended by the bevelled surfaces, and applying a constant force against the butt of the wedge during the welding process.

2,449,083
METHOD OF AND APPARATUS FOR SETTING SELF-SYNCHRONOUS MACHINES ON ZERO
George Alfred Muir, New York, N. Y.
Application April 15, 1946, Serial No. 662,162
7 Claims. (Cl. 177—337)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A method of setting a self-synchronous machine on electrical zero position comprising applying an alternating current excitation to the rotor of said machine insufficient to cause rotation of said rotor, positioning said rotor to yield minimum induced voltage between a pair of the stator terminals of said machine, and generating signals to indicate the electrical zero position.

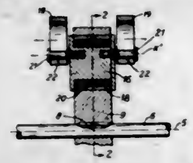
2,449,084
REMOTE CONTROL SYSTEM FOR AIRCRAFT LANDING GEAR AND LANDING FLAPS
Peter R. Murray, Dayton, Ohio
Application August 1, 1945, Serial No. 608,347
3 Claims. (Cl. 244—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a system for the remote control of an aircraft or the like equipped with means alternatively operable for raising and lowering the landing gear of the aircraft and other means alternatively operable for raising and lowering the flaps of the aircraft, said system including means for selectively controlling the operational functions of the aircraft comprising a plurality of jointly operable stepper switches, a first function-selecting switch effective when actuated while the stepper switches are in a first step position to raise the flaps and being further effective when actuated while the stepper switches are in a second step position to raise the landing gear, and a second function-selecting switch normally effective when actuated while the stepper switches are in a first step position to lower the flaps and being further normally effective when actuated while the stepper switches are in a second step position to lower the landing gear, means for enabling the second function selecting switch to control the lowering of both the landing gear and the flaps while the stepper



switches are maintained in said second step position comprising a first relay operated once for each actuation of the second function-selecting switch, a second relay arranged to be operated and held energized through a holding circuit for a given operation of said first relay, said gear-operating means being controlled by said second relay for lowering the landing gear when said second relay is energized, and a third relay having contacts and mechanical latching means therefor and effective upon release of said first relay while said second relay is held energized through its holding circuit to actuate and latch said contacts, said flap-operating means being controlled by said third relay and effective upon operation of said first relay while said third relay is in a latched condition to lower the flaps of the aircraft.

2,449,085
SUBMERSIBLE SEISMOMETER SYSTEM
Raymond A. Peterson, Pasadena, Calif., assignor, by mesne assignments, to United Geophysical Company, Inc., Pasadena, Calif., a corporation of California
Application December 12, 1944, Serial No. 567,891
7 Claims. (Cl. 177—352)

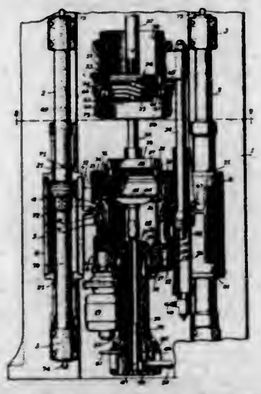


1. Means for coupling a seismic detecting device to a water medium carrying seismic waves, which comprises a float for floating at the surface of the water and a platform adapted to be submerged in the water suspended from the float and adapted to have placed thereon the seismic detecting device, the platform being non-resonant at frequencies within the effective seismic wave range and being sufficiently rigid to be set into vibration as a whole in correspondence with seismic waves in the water.

2,449,086
ELECTRIC RELAY
Osborne I. Price, Frederick, Md.
Application January 7, 1947, Serial No. 720,557
9 Claims. (Cl. 200—104)

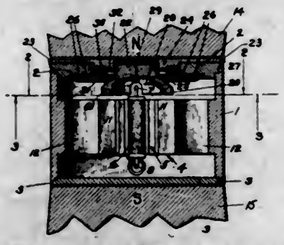
8. An electric relay comprising an angle member of magnetic material, a magnetic core carried by one side of said angle member and extending to a position substantially coincident with the end of the other side of said angle member, an operating winding associated with said magnetic core, the last mentioned side of said angle member terminating in a pair of angularly disposed spaced tongues, an armature having a pair of oppositely directed lugs rockably supported on said tongues in a position adjacent the end of said magnetic core, an actuating member having an actuating portion extending substantially the length of the last mentioned side of said angle member and terminating in a head portion disposed in a plane extending substantially at an obtuse angle to the actuating portion thereof, the head portion of said actuating member having a pair of oppositely directed edge portions, means coupling the head portion of said actuating member and said armature for clamping the oppositely extending lugs of said armature and the oppositely directed edge portions of said head portion on opposite sides of said angularly inclined tongues whereby said armature is maintained at an obtuse angle to the axis of said core when the actuating portion of said actuating member is moved to contacting relation with said angle member and whereby said armature is moved to a position substantially parallel with the end of said core when the actuating portion of said actuating member is displaced away from said angle member, an insulated support carried by said angle member and bridging the actuating portion of said actuating member, a spring pile-up assembly mounted on said insulated support and a T-shaped insulator carried by the actuating portion of said actuating member and extending toward said spring pile-up assembly and serving as an actuating abutment therefor, said angle member being recessed in alignment with said T-shaped insulator for allowing said T-shaped insulator to extend therethrough.

2,449,087
OSCILLATION REDUCING DEVICE
Francois Marie Michel Bernard Salomon, Paris, France
Original application August 16, 1939, Serial No. 290,433. Divided and this application May 25, 1945, Serial No. 595,837. In Luxembourg August 17, 1938
14 Claims. (Cl. 74—574)



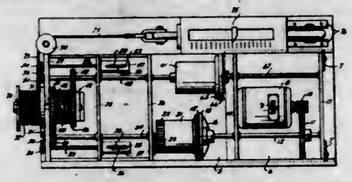
1. In apparatus of the class described, a rotatable member, a damping mass carried by said member for movement relative thereto, yielding means completely surrounding at least a part of said mass and engaging said member, and a freely swinging pendular damping mass carried by first-named mass.

2,449,088
OCTA-CHLORO-BIPHENYL QUINONE
Franklin D. Smith, Webster Groves, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 23, 1945, Serial No. 606,723
1 Claim. (Cl. 260—396)



As a new product, octa-chlorobiphenyl quinone.

2,449,089
HEAT-TREATING APPARATUS
Howard E. Somes, Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application October 7, 1944, Serial No. 557,606
3 Claims. (Cl. 266—6)



1. Work holding apparatus adapted to be used for centering and holding an annular workpiece along a longitudinal axis of movement, as for heat treating operations in which the workpiece and a heating head have axial movement relative to each other, and the like, comprising a pair of rotatable members relatively axially movable into and out of cooperative position with respect to the workpiece, means for rotating one of said members, said members including annular means operative in said cooperative position to engage the opposite ends of the workpiece, one of said members having an annular skirt portion extending toward the other member and a sleeve surrounding said skirt portion and guided thereby for axial movement only relative thereto, the other of said members having an annular ring element facing said sleeve, operative in said cooperative position to frictionally engage said sleeve and effect rotation of said one member from said other member, spring means urging said sleeve toward said annular ring element, and means for effecting the relative movement of said members.

2,449,090
TEMPERATURE COMPENSATED MAGNETRON
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 11, 1943, Serial No. 475,562
8 Claims. (Cl. 250—27.5)

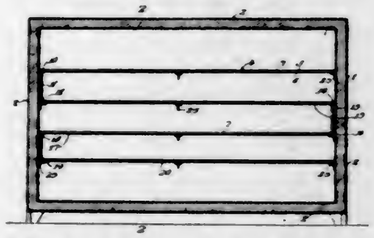
1. An electron-discharge device comprising: a cathode: an anode structure spaced from said cathode and including a cavity resonator; a conducting member supported within said anode structure in spaced relationship to said cavity resonator, and forming therewith a capacitor; and a thermally-responsive element, disposed intermediate said anode structure and said conducting member, for controlling the spacing between said conducting member and said cavity resonator to tune said device as a function of the temperature thereof.

2,449,091
MACHINE FOR TESTING CLUTCH AND BRAKE ASSEMBLIES
Richard G. Starling, Harviell, Mo.
Application January 23, 1945, Serial No. 574,173
4 Claims. (Cl. 73—121)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A machine for simultaneously testing both the clutch and the brake assemblies of the type wherein each of said assemblies includes a pair of elements having frictional engagement, said machine comprising two pairs of holding members, one pair for holding the companion clutch elements and one pair for holding the companion brake elements in operative frictional engagement, differential gear means operatively connecting one of the clutch holding members with one of the brake holding members, means for driving one of the two remaining holding members and also means for holding the last of said holding members, a pair of individual loading pressure indicators, means operatively connecting one thereof with the clutch and the other with the brake, a dynamometer and means operatively connecting it with said member-connecting differential gear means to be actuated thereby during the operation of the machine to indicate simultaneously the range of the torque loading of the combined clutch and brake assemblies.

2,449,092
SCRAPING IMPLEMENT
Donald L. Struble, Marshall, Mich.
Application July 26, 1947, Serial No. 763,865
2 Claims. (Cl. 15—236)

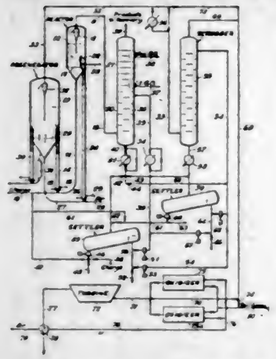
1. A meat scraper including a plurality of nested loops of highly resilient strip material in-



creasing in diameter from the innermost loop outwardly, a handle projecting radially from the outermost loop, and means passing through said loops and extending axially into said handle and engaging therein, said means acting to clamp said loops together and pressing said loops together while simultaneously affixing them to the handle, said loops being free for independent edgewise movement except at their points of engagement by said means.

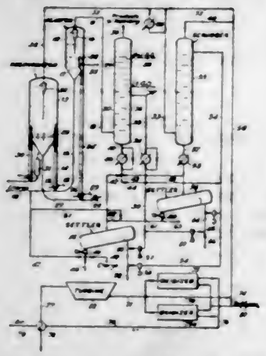
2,449,093
CATHODE RAY TUBE CALIBRATION
Joseph Weingarten, New York, N. Y.
Application May 14, 1946, Serial No. 669,557
38 Claims. (Cl. 250—164)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A cathode ray tube having a light sensitive coating thereon exposed in accordance with a luminous pattern generated within said tube.



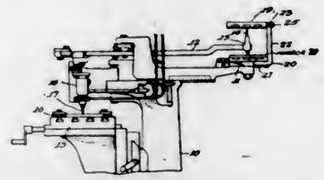
2,449,094
EVAPORATOR CONSTRUCTION
Harold E. Wheeler, Chicago, Ill.
Application April 7, 1944, Serial No. 529,965
2 Claims. (Cl. 62—126)

1. A refrigerator comprising a cabinet and a plurality of refrigerated shelves mounted within the cabinet and made from a single strip of extruded material bent to provide a plurality of horizontal shelf portions and an integral riser portion connecting a pair of said shelf portions, said strip having spaced longitudinal ducts formed therein and extending in said horizontal shelf and riser portions for the passage of refrigerant therethrough, and a foraminous grill forming a shelf extension supported in coplanar alinement with at least one of said horizontal shelf portions.



2,449,095
CATALYTIC CONVERSION SYSTEMS EMPLOYING FLUIDIZED SOLIDS
Harry K. Wheeler, Jr., and Robert J. Hengstebeck, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application March 29, 1945, Serial No. 585,490
4 Claims. (Cl. 196—52)

1. In a hydrocarbon conversion process effected with fluidized catalyst solids of small particle size wherein both an effluent product stream and an effluent regeneration gas stream contain residual solids, the method of operation which comprises introducing the effluent product stream at the base of a first scrubbing zone, scrubbing solids from said stream in said first scrubbing zone with a heavy hydrocarbon oil scrubbing liquid, introducing at least a part of



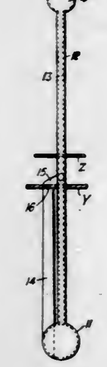
the scrubbing liquid from said first scrubbing zone into a second scrubbing zone, contacting said regeneration gas stream with said liquid in said second scrubbing zone for recovering solids from said regeneration gas stream, separating solids from said last-named scrubbing liquid and returning at least a part of said separated solids to said hydrocarbon conversion process.

2,449,096
POWER RECOVERY FROM CATALYTIC CONVERSION SYSTEMS EMPLOYING FLUIDIZED SOLIDS
Harry K. Wheeler, Jr., Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Original application March 29, 1945, Serial No. 585,490. Divided and this application January 15, 1948, Serial No. 2,434
4 Claims. (Cl. 196—52)

1. In a catalytic conversion system wherein solid catalyst material of small particle size is handled as a fluidized mass and continuously cycled from a conversion zone to a regeneration zone and thence back to a conversion zone and wherein a hot regeneration gas stream containing residual solid particles is discharged from the regeneration zone at superatmospheric pressure, the method of operation which comprises scrubbing said residual solids from said stream with a hot non-volatile hydrocarbon liquid in a scrubbing zone which is at a temperature of at least about 900° F. whereby solids are removed from said stream without cooling it below such temperature and impelling a generator of motive power with said stream from which residual solids have thus been removed.

2,449,097
ENGRAVING MACHINE
Albert L. Woody, Homewood, Ill.
Application February 21, 1944, Serial No. 523,293
7 Claims. (Cl. 90—13.1)

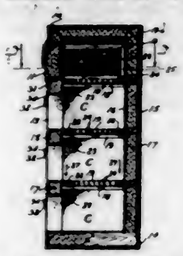
1. The combination with a pantograph engraving machine having the usual copyholder with a tracer point mounted above the copyholder and means for transmitting movement from the tracer point to the cutting tool, of a bracket secured to the copyholder, an auxiliary copyholder carried by said bracket and extending out over the tracer point with its face opposed to the face of the first named copyholder and serving to hold copy facing downwardly to coact with the upwardly extending tracer point, and a reflecting surface positioned below the tracer point for observing the action of the tracer point with respect to the copy.



2,449,098
PROCESS FOR MAKING OILS FROM ACID SLUDGES RESULTING FROM THE SULFURIC ACID PURIFICATION OF COAL TAR DISTILLATES
Harry L. Allen and George J. Skriver, Philadelphia, Pa., assignors to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application September 29, 1945, Serial No. 619,426
5 Claims. (Cl. 196—148)

1. The method for making an oil which comprises treating acid sludge, resulting from the sulfuric acid purification of coal tar distillate, with water under conditions to form a mass comprising acid pitch and aqueous relatively weak sulfuric acid, separating the acid pitch from at least most of the weak sulfuric acid, treating the acid pitch with neutralizing agent under conditions to substantially completely neutralize remaining sulfuric acid associated with the acid pitch, separating from the acid pitch substantially all of any residual aqueous phase resulting from said neutralization operation, subjecting the neutralized acid pitch to destructive distillation at atmospheric pressure by gradual external heating and at temperature such that vapor temperature of the oil vapors exiting the distillation zone does not substantially exceed 400° C. and for a period of time such that the distillation zone residue is reduced to a relatively solid coke-like mass, condensing the oil vapors exiting the distillation zone and recovering an oil fraction boiling within the range of substantially 75–400° C.

2,449,099
GLASS HAVING LOW POWER FACTOR
William H. Armistead, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application January 23, 1945, Serial No. 574,204
8 Claims. (Cl. 106—53)



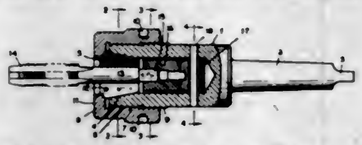
1. A glass having a power factor less than .06%, a dielectric constant of at least 7 and a softening temperature less than 625° C., which consists essentially of SiO_2, BaO, PbO, K_2O, Na_2O, and Li_2O, the SiO_2 being more than 38% and less than 65%, the total of the alkali metal oxides being more than 5% and not less than (5+X) % where X is the excess of SiO_2 over 45%, the ratio K_2O/Na_2O being from 1.5/1 to 4/1, the ratio $(K_2O+Na_2O)/Li_2O$ being from 4/1 to 19/1, the total BaO and PbO being between 10% and 60%, and the ratio of BaO to PbO being less than 1 when the SiO_2 is below 40%, the glass being substantially free from Al_2O_3.

2,449,100
NEEDLE FRAME FOR GAUZE WEAVING LOOMS
Maurus Banyai, Glasgow, Scotland, assignor to M. Banyai Limited, Glasgow, Scotland, a corporation of Great Britain
Application May 21, 1946, Serial No. 671,270
In Great Britain April 3, 1946
3 Claims. (Cl. 139—53)

1. In a needle frame for weaving looms including a row of spaced dents extending between cross-bars of the frame, and doup needles alternating with the dents of the frame, the improvement which comprises doup needles extending from one of the cross-bars and each terminating with a free end intermediate the cross-bars, the free end portion of each needle having an eyelet to one side of the row of dents, the eyelets of the needles being in register in a line to one side of the row of dents, and each needle having an offset tip end extending between adjacent dents and adapted to engage the adjacent sides thereof beyond and vertically spaced from the position of the eyelet in the needle, whereby a yarn extending through the eyelet and between adjacent dents is free of and in substantially the same vertical plane as the tip of the needle.

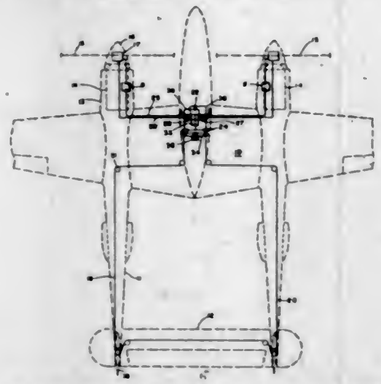
2,449,101
MULTIPLE UNIT FREEZER CABINET
Lyndle W. Barley, Colorado Springs, Colo.
Application April 5, 1947, Serial No. 739,732
5 Claims. (Cl. 62—89)

1. A refrigerating apparatus, comprising, a a cabinet having heat insulating walls, one side wall having a plurality of door openings, arranged in vertically spaced rows, a freezer plate positioned along the roof of the cabinet and other freezer plates extending horizontally between each row of door openings, dividing the interior into as many sections as there are horizontal rows of door openings, forming shelves, the freezer plates below the top plate being of less width than the cabinet, and positioned substantially centrally, providing air passages from top to bottom along the front and the rear walls, and vertical reticulated partitions positioned to separate the sections into compartments, one for each door opening.



2,449,102
VACUUM CLEANER BAG
Arthur Beager and Elizabeth W. Beager, New York, N. Y.
Application September 29, 1945, Serial No. 619,316
2 Claims. (Cl. 183—51)

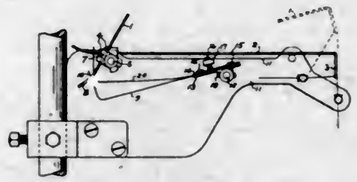
2. In vacuum cleaner bags, a cleaner bag formed of pliable material and having open ends, one end of said bag being adapted to be attached to the dust outlet of the vacuum cleaner, the other end of said bag having an expandable band secured to the circumference of the opening of the bag, the said expansible band having guide clamps secured to the free ends thereof, and a spring catch for maintaining various degrees of expansion, and a closing cap formed of pliable material adapted to be detachably secured over the said expansible band when contracted, and serving to seal the opening.



2,449,103
TAP DRIVER
Henry P. Boggis, Shaker Heights, Ohio
Application March 28, 1944, Serial No. 528,497
4 Claims. (Cl. 279—56)

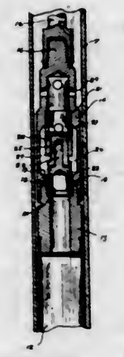
4. A tool holder comprising a body having a driving shank, means for maintaining a tool in substantially axial alignment with said shank, axially adjacent driving and driven blocks loosely fitting within said body, said blocks having a complementary tongue and groove connection between them for permitting relative transverse movement thereof in said body, said driven block being formed with a socket for driving engage-

ment with the end of the tool, and means supporting said driving block for rotation in unison with said body and for transverse movement in said body along a line angularly disposed with respect to the line of transverse movement permitted by the tongue and groove connection of said blocks.



2,449,104
MEANS FOR FACILITATING THE FEATHERING OF PROPELLERS RESPONSIVE TO YAW CONTROL
Milo Burcham, Burbank, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application November 6, 1943, Serial No. 509,315
4 Claims. (Cl. 244—51)

1. In an airplane having an engine spaced at each side of its longitudinal axis and having its rotational axis substantially parallel therewith, a screw propeller driven by each engine, a separate means for feathering each propeller and a control surface, the combination of a control for said surface having a manually movable control part, a separate control circuit for each feathering means and means operable by the movement of said part, required to correct the yawing of the airplane resulting from failure of an engine, for selectively governing said circuits.

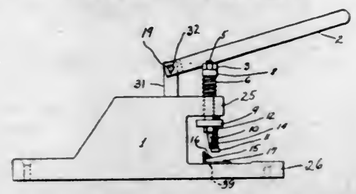


2,449,105
YARN TAKE-UP
John S. Bradley, North Attleboro, Mass., and Norman H. Smith, Pawtucket, R. I., assignors to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts
Application May 23, 1947, Serial No. 750,098
6 Claims. (Cl. 66—146)

1. A yarn take-up for a knitting machine which includes a swingable take-up arm and a leaf spring member for swinging said arm, said spring comprising a source of energy which is greatest when said arm is down and which decreases progressively as said arm rises, said spring having an end thereof in variable leverage rela-

tion with said arm, whereby variations in the applied force of said spring are accompanied by simultaneous inverse variations in its effective force upon said take-up arm.

2,449,106
VALVE CAGE
Chalon E. Bridwell, Detroit, Mich.
Application September 2, 1944, Serial No. 552,533
2 Claims. (Cl. 277—42)

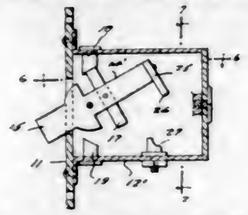


1. In a pumping mechanism: a valve seat positioned in the path of flow of liquid and having an opening formed therethrough for passage of liquid therethrough and provided with an end face for engaging a valve for closing said opening said end face lying in a plane at right angles to its axis; a guide sleeve having a bore formed therethrough arranged in axial alignment with said valve seat; a cup-shaped valve for engaging the face of said valve seat for closing the passage therethrough and provided with a hollow neck extending into said guide sleeve and slidable therein; a second cup-shaped valve engageable with said seat face simultaneously with the engagement of said first valve with said seat face and nesting in said first-named cup-shaped valve; a stem projecting centrally from the base of said second valve and slidably engaging in said neck; and a valve cage embracing said valve structure for conducting fluid passing through said opening along and around said valve structure, said fluid having access to the hollow portion of said neck, said stem being of sufficiently small diameter to provide space in said neck for passage of fluid thereinto and therefrom.

2,449,107
PROCESS OF MAKING REFINED SUGAR-CANE WAX
Charles B. Broeg and Royal T. Balch, Houma, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application July 2, 1948, Serial No. 36,797
3 Claims. (Cl. 260—428.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

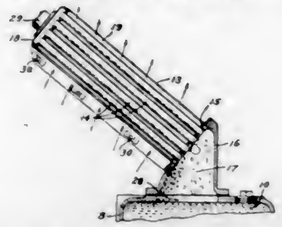
1. A process of obtaining a light-colored wax product from the hard dark-colored wax product, obtained from clarification mud of sugarcane factories by extraction of a crude wax product from the mud with an organic solvent for the crude wax product and recovering the hard dark-colored wax product by distilling off the solvent and subjecting the residue to the action of a selective solvent to dissolve out the fatty portions, comprising mixing the hard dark-colored wax product with a selective solvent selected from the group consisting of monohydric, saturated, aliphatic alcohols having 3 and more carbon atoms diluted with water, and acetic esters of monohydric, saturated, aliphatic alcohols diluted with water, and separating the solution containing the light-colored wax fraction from the insoluble, very dark-colored fraction.

2,449,108
HAND OPERATED LEATHER PUNCHING MACHINE
George P. Carlock, Jersey City, N. J.
Application June 22, 1946, Serial No. 678,545
7 Claims. (Cl. 164—96)



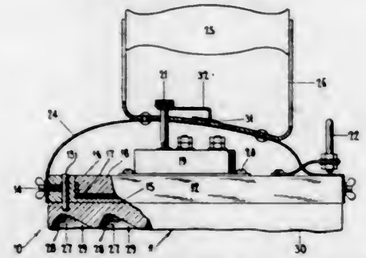
1. A leather perforating machine comprising a punch, a punch carrier supporting said punch and having reciprocating movement, a guide plate for receiving the leather to be operated on by said punch, a support for the guide plate, means on the guide plate to one side of the punch path for holding the leather and gauging the same in its position on said guide plate, and holding means for the leather carried by said carrier and disposed on the opposite side of said punch.

2,449,109
QUICK ACTION SWITCH
Richard J. Domonkas, Barberton, Ohio
Application February 5, 1946, Serial No. 645,587
2 Claims. (Cl. 200—154)



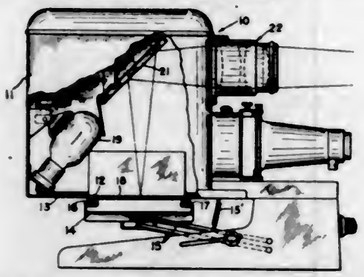
1. In a manually operated snap switch, a switch bar, a support, means extending at right angles to said bar intermediate its ends and pivotally connecting said bar to said support, one end of said bar providing an actuating handle, a contact movable with said bar and carried by the other end of said bar, spaced contacts fixed to said support and adapted to be bridged by said first contact when said bar is pivoted in one direction, a permanent bar magnet fixed to said bar intermediate said means and one end of said bar and extending at right angles thereto and to said means, and a pair of fixed elements

adapted for magnetic attraction carried by said support, one of said elements being positioned to attract one pole of said magnet and said other



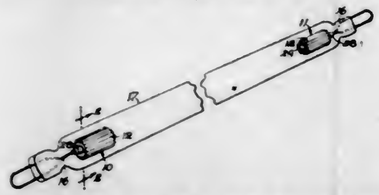
element being positioned to attract the other pole of said magnet, whereby to actuate said bar with a snap action when the same is manually moved on said means past a dead center.

2,449,110
COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Paul W. Eells, West Allis, Wis., assignor to Le Roi Company, West Allis, Wis., a corporation of Wisconsin
Application November 4, 1946, Serial No. 707,655
9 Claims. (Cl. 123—174)



7. In a cooling system for an internal combustion engine having an approximately horizontal shaft, a condenser having a group of parallel spaced tubes inclined downwardly toward the engine cooling jacket and in open communication therewith, and an air blower having a rotor driven directly by the engine shaft and being provided with an upwardly directed air delivery duct formed to deliver air without abrupt change in direction to the spaces between the tubes of said group, said condenser being detachably confined entirely within said duct.

2,449,111
DESIGN MOLD FOR TREATING FUR
Arnold Leonard Foster, Brooklyn, N. Y.
Application August 13, 1946, Serial No. 690,290
1 Claim. (Cl. 69—20)



In a heated metallic design-mold for curling the hair on fur, said mold having cavities defined by arcuate contours simulating the contours of the curls of hair on natural furs, said mold having a non-planar outer fur contacting surface, the developed length crosswise of each of said cavities being less than one-half the length of said hair, the surfaces defining said mold cavities causing the heat to be transmitted directly to said hair along their entire length, thereby causing said hair to curl in a direction crosswise of said cavities, each of said cavities having a substantially vertical curl-initiating wall element and an inclined curl finishing wall element.

2,449,112
OBJECT HOLDER FOR OPAQUE PICTURE PROJECTORS
Wright W. Frost, Knoxville, Tenn., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application December 2, 1947, Serial No. 789,285
4 Claims. (Cl. 88—26)

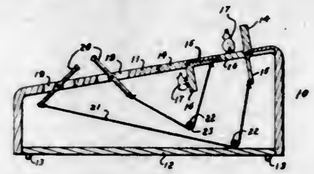
1. In a projector having a casing provided with an opening and a holder having oppositely disposed inturned edges for holding an object in projecting position adjacent the opening, the combination of a plate, each of two opposite edge portions of said plate being formed with double reversed folds, one pair of similar folds being faced outwardly and adapted to slidably engage the inturned edges of said holder, the other pair of similar folds being adjacent to the plate and facing inwardly and forming slideways for slidably receiving objects which are to be projected.

2,449,113
ELECTRIC DISCHARGE DEVICE
Hal Frederick Fruth, Skokie, Ill.
Application July 22, 1944, Serial No. 546,120
4 Claims. (Cl. 176—126)

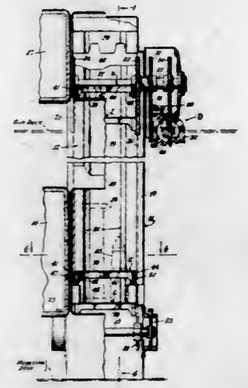
1. A radiation emitting cold cathode type discharge tube comprising, in combination, first and second electrodes having means for supplying current thereto, a radiation transparent envelope mounting said electrodes therein in spaced apart relation, at least one of said electrodes consisting of a homogeneous refractory ceramic material, said material being comprised predominately of a titanate having the property of conducting electricity through the body thereof even at low temperatures, said ceramic electrode having a surface which is covered by a multiplicity of microscopically fine points resulting from high temperature firing, said points giving rise to an intense potential gradient in the region thereof upon application of voltage to said electrodes to facilitate the passage of electrons therefrom at a magnitude sufficient to produce localized heating at said points.

2,449,114
LUBRICATING COMPOSITION
Charles L. Gebauer, Cleveland, Ohio, assignor to The Gebauer Chemical Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October 25, 1944, Serial No. 560,342
2 Claims. (Cl. 252—29)

1. A lubricating compound comprising colloidal graphite dispersed in a halogenated hydrocarbon solvent for grease consisting of a mixture of ethyl chloride with dichloro-monofluoro-methane in substantially the proportions of 20 parts by volume of ethyl chloride to 80 parts by volume of dichloro-monofluoro-methane, the proportion of the colloidal graphite to the aforesaid mixture of ethyl chloride with dichloro-monofluoro-methane being approximately from 2 to 10 parts by volume of the colloidal graphite to 98 to 90 parts by volume of the said mixture.



2,449,115
HOSIERY PROTECTOR
Flora L. Harriman, Lansing, Mich.
Application December 27, 1946, Serial No. 718,819
4 Claims. (Cl. 36—2)

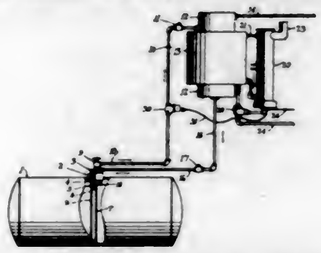


1. In a hose protector, a sheet of flexible, waterproof material having corresponding portions disposed at a right angle to one another, said protector being adapted to be disposed with the intermediate portion thereof positioned against the back of the leg and ankle with the outer edges thereof extending around the leg and converging at the back of the leg and the inner edges thereof disposed around the ankle and adjacent the shoe, the end portions of said protector being crossed one over the other over the instep of the foot and under the instep of the shoe.

2,449,116
TOY
James Hatchett, Baird, Tex.
Application September 3, 1946, Serial No. 694,638
2 Claims. (Cl. 46—13)

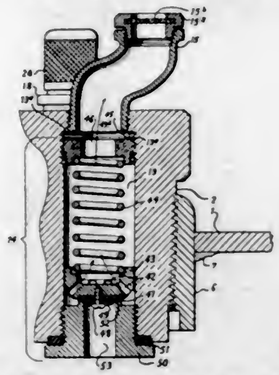
1. A toy comprising a support having a flat surface provided with a plurality of apertures, pivoted trap doors for said apertures, platforms secured at right angles to said doors and designed to fit in said apertures when the doors are raised, extensions depending from said doors, miniature images mounted on said platforms, spring means to normally seat said doors in said apertures, operating levers mounted in said support, and means connecting each of said door extensions to an operating lever.

2,449,117
CONVEYER
Bjarne Henricksen, Cliffside Park, N. J., assignor to Sedgwick Machine Works, Inc., Poughkeepsie, N. Y., a corporation of New York
Original application June 2, 1943, Serial No. 489,325. Divided and this application October 13, 1945, Serial No. 622,113
3 Claims. (Cl. 198—206)



1. A conveyor comprising: a pair of endless chains positioned in spaced relation, a metal trunk enclosing the chains, a longitudinally extending partition separating the load-carrying and return branches of the chains, and a series of shelf-like conveyor elements mounted on the chains, a wall of the trunk adjacent the load-carrying branch of the chains being longitudinally channeled to assist in maintaining conveyed articles in desired position on the conveyor elements.

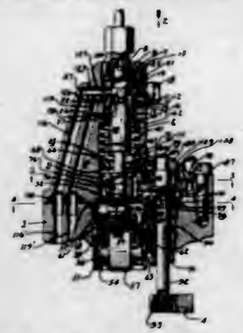
2,449,118
HIGH-PRESSURE PETROLEUM GAS DISPENSING METHOD AND APPARATUS
John R. Holicer, Shreveport, La.
Application November 13, 1943, Serial No. 510,228
8 Claims. (Cl. 62—1)



1. The method of storing and dispensing high pressure petroleum gas, which consists of mixing the gas with a body of stable liquid under pressure, expelling a portion of the mixture by the pressure of gas emanating from the mixture, collecting the expelled portion in a separating chamber, heating the chamber to liberate the gas from

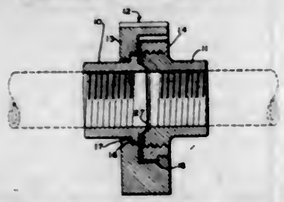
the mixture in the chamber and to increase its pressure, returning the separated liquid to the

original body by said increase in pressure, and removing for consumption the liberated gas.



2,449,119
CONTROL FITTING FOR LIQUEFIED PETROLEUM GAS TANKS
John R. Holicer, Shreveport, La.
Application October 14, 1944, Serial No. 558,775
5 Claims. (Cl. 62—1)

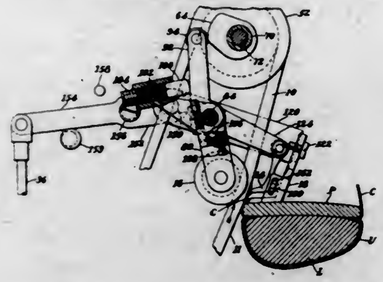
4. In apparatus for controlling liquefied petroleum gas, a control fitting arranged to be removably attached to a tank and provided with a compact body which constitutes a valve housing; a relief valve arranged within a passageway disposed through the body, the passageway being provided with a safety shoulder in its upper part below which the valve is disposed, the valve including: retaining means within the lower end of the passageway formed to provide a valve seat; a movable cup-disc resting upon the retaining means and provided with apertures arranged at such angle as to allow fluid discharged therethrough to be directed upwardly toward the center of the passageway; a spring arranged to rest in the cup-disc; and movable spring adjusting means carried in the passageway.



2,449,120
FUEL INJECTION MECHANISM
Lloyd E. Johnson, Fon du Lac Township, Tazewell County, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application August 25, 1943, Serial No. 499,891
16 Claims. (Cl. 103—41)

1. Fuel injection mechanism comprising housing means, a pump plunger mounted for reciprocation in the housing means to feed fuel under pressure and which is of the type wherein metering of fuel is controlled by angular adjustment of the plunger, tappet mechanism adjacent an end of the plunger for moving the plunger axially in one direction, a guide sleeve slidably mounted in the housing means into which the tappet end portion of the plunger projects and having a wall between the tappet end of the plunger and the tappet mechanism, a shoulder on the plunger adjacent an end of the sleeve and spaced from said sleeve wall, a spring retainer member about the plunger adjacent said end of the sleeve and the plunger shoulder, spring means between the retainer member and an abutment in the hous-

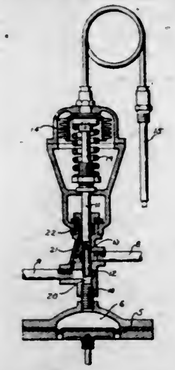
ing means for moving the plunger in an opposite direction, the sleeve having an opening in the periphery thereof, a gear member secured to the plunger within the sleeve between said sleeve wall and said plunger shoulder and having its teeth accessible through the sleeve opening, another gear member engaging the first mentioned gear member and which is journalled in the housing means, stop means within the housing means for limiting the extent of turning of the second mentioned gear member, and spring means between the housing means, and said second mentioned gear member for urging such gear member toward a predetermined position against the stop means.



2,449,121
COUPLING NUT
Nelson A. Jones, Catawissa, Pa.
Application August 26, 1946, Serial No. 692,996
2 Claims. (Cl. 285—177)

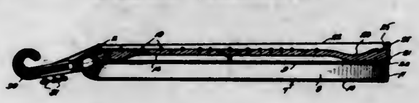
1. A coupling device of the type described comprising a plurality of nipples adapted to be attached to the ends of pipes to be coupled together, one of said nipples having an annular outwardly extending flange and a sealing surface disposed inwardly of said flange and the other of said nipples having external screw threads, a female coupling member having a radially inwardly extending flange adapted to rotatably engage said outwardly extending flange, said female member also having a plurality of radially inwardly extending circumferentially spaced lugs, the inner surface of said lugs being

arranged at right angles to the axis of said member and spaced axially from said inwardly extending flange, a male coupling member having internal threads adapted to engage the external threads on the other of said nipples and an annular end sealing surface complemental to the sealing surface of said other nipple, said male coupling member also having outwardly extending lugs so spaced circumferentially as to permit their entry between the lugs on said female coupling member to permit said male member to be assembled in nested relation with said female member whereby upon relative rotational movement between said coupling members the lugs on the respective members will be moved into overlapped engagement, and means on said male coupling member adapted to engage the ends of the lugs on said female member to limit relative movement between said coupling members whereby continued movement of said female coupling member will rotate said male coupling member and cause said elements to be drawn together in fluid-tight engagement.



2,449,122
LASTING MACHINE
Bernhardt Jorgensen, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 30, 1946, Serial No. 700,266
28 Claims. (Cl. 12—1)

3. In a lasting machine, a member having an endless friction surface for engaging one side of the lasting margin of stock to be lasted and movable in a direction extending heightwise of a shoe presented to the machine, a second member arranged to engage the opposite side of said lasting margin, and means for periodically effecting relative approaching movement of said members to cause the friction surface to exert a frictional drag on the lasting margin, thereby to tension the stock heightwise of the shoe.

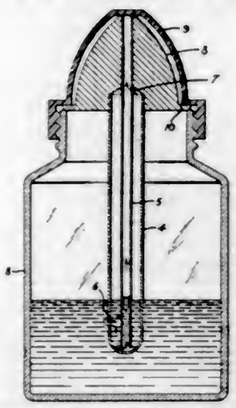


2,449,123
PILOT VALVE FOR COMBINED TEMPERATURE AND PRESSURE CONTROL APPARATUS
James L. Kimball and Roy C. Earley, Danvers, Mass., assignors to Ruggles-Klingemann Mfg. Co., Salem, Mass.
Application November 1, 1944, Serial No. 561,444
1 Claim. (Cl. 251—76)

In a fluid pressure control valve, comprising in combination, a valve casing having high pressure admission and first and second delivery ports, a valve stem of uniform diameter throughout slidable within the bore of said casing, said stem having a hollow core forming a central passage at its lower end with cross ports connecting therewith adapted to register with the high pressure admission port through said cross ports and said central passage when said stem is in one of two effective positions, and to close said high pressure port and establish communication between the first and second named ports when in

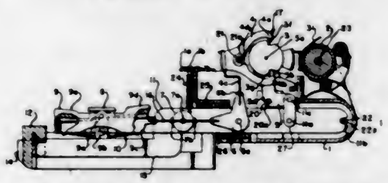
the other relative position, a stuffing box through which the stem enters the casing, an exhaust vent passage connecting the lower end of the stuffing box with the second named delivery port, and control means for operating said stem to either one or the other of its effective positions.

2,449,124
MUSICAL INSTRUMENT
Arthur Horden Kimmons, Burgettstown, Pa.
Application August 26, 1946, Serial No. 693,104
1 Claim. (Cl. 84—267)



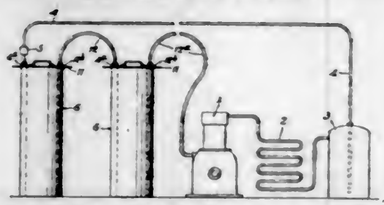
In a stringed musical instrument, a finger board adapted to extend from end-to-end of an elongated sounding box and supported thereby and disposed thereabove, said finger board having string supporting bridges rising therefrom adjacent each end thereof, a plurality of upstanding frets rising from said finger board and located between said bridges, said frets being disposed transversely of the finger board in longitudinally spaced relationship to one another from adjacent one end of the finger board and terminating a distance from the other end thereof, the upper surface of said finger board being provided with a concave portion located adjacent the last mentioned end thereof and between the bridge at said end and the adjacent fret of the finger board and the upper surface of said finger board being inclined upwardly and away from the upper surface of the sounding box from said concave part to the first mentioned end of the finger board.

2,449,125
APPLICATOR FOR LIQUID MEDICINAL PREPARATIONS
Edward A. H. King, Port Washington, N. Y.
Application December 18, 1946, Serial No. 716,983
2 Claims. (Cl. 128—148)



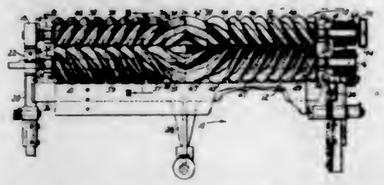
1. In an applicator for liquid medicinal preparation, a closed chamber comprising a side wall

having an orifice therein near the bottom of the chamber spaced from the bottom to retain a predetermined amount of liquid between the orifice and the bottom of the chamber, a tube open at both ends extending into a region adjacent to the bottom of the chamber and having a lateral spray-forming aperture therein situated at an appreciable distance above the orifice and disposed to admit liquid into the tube intermediate the ends thereof, whereby tilting the applicator to a



position where the upper end of the tube is in a position below the level of the liquid in the chamber will permit the predetermined amount of liquid to enter the tube through the lateral spray-forming aperture emerging from the tube in the form of drops and the drawing of air upwardly through the tube will cause the liquid to rise therein to the spray-forming aperture where it will mix with air entering the aperture to form a spray.

2,449,126
MECHANICAL SHORTHAND WRITING MEANS
Wendell V. Kirkpatrick, Bonita, Calif.
Application November 2, 1945, Serial No. 626,222
9 Claims. (Cl. 197—9)

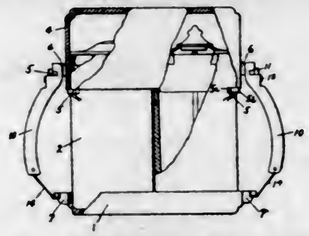


2. In a mechanical shorthand writing means of the class described, a combination of a frame, a shift tong provided with two diverging tong portions pivotally mounted in connection with said frame, a type supporting member having type in connection therewith pivotally mounted intermediate the tong portions of said shift tong member and engageable thereby, a bellcrank pivotally connected with said frame and arranged in pivotally connected relation with said type supporting member at its one end, a main key lever pivotally connected with said frame and cooperatively connected with said bellcrank for shifting said type supporting member relatively to said tong portions, and a platen roller in spaced relation to said type supporting member in close proximity to the type in connection therewith.

2,449,127
APPARATUS FOR COOLING THE INTERIORS OF CONTAINERS
Herman W. Kleist, Chicago, Ill., assignor to Dole Refrigerating Company, Chicago, Ill., a corporation of Illinois
Application March 15, 1944, Serial No. 526,610
6 Claims. (Cl. 62—141)

1. In an evaporator adapted for use for cooling the contents of containers, an inner cylinder and an outer cylinder, the said cylinders being connected at their upper and lower ends, a coil extending helically about the space between said cylinders, a refrigerant inlet duct extending to said coil and a refrigerant outlet duct extending from said coil, the space surrounded by the inner cylinder being open at the bottom, and evaporator supporting means adjacent the top of the evaporator, adapted to seat upon the container into which said evaporator is inserted.

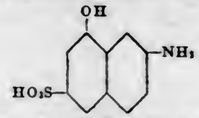
2,449,128
MACHINE FOR TREATING HIDES, SKINS, AND LEATHER
Cutler D. Knowlton, Rockport, and David Edgar, Lynn, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 23, 1947, Serial No. 762,916
13 Claims. (Cl. 69—34)



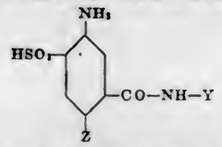
1. In a machine for operating on hides, skins and leather, a pair of cooperating rotary work treating members each having helical blades extending in opposite directions from a substantially median point in its length, the blades nearer said median point having the greater lead, and a side of each blade on one member arranged to interact with a side of one blade on the other member to treat a work piece interposed between them.

2,449,129
COOKING UTENSIL COMBINATION
Elmar Kolehmainen and Hugh S. Baird, Inglewood, Calif.
Application January 25, 1946, Serial No. 643,417
9 Claims. (Cl. 206—4)

1. A cooking utensil combination comprising, a vessel such as a frying pan, a plurality of pots seatable in said pan and shaped tightly to fit therein, each of said pots having a lug projecting from the side thereof, all of said lugs being positioned at the same elevation above the frying



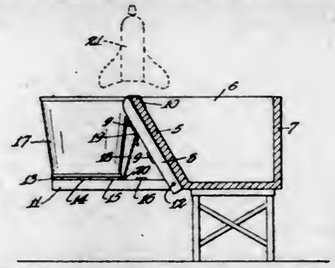
pan, the latter being made with similar lugs, an inverted pot tightly fitted over the tops of said pots and resting on top of the lugs projecting therefrom, said inverted pot having similar pro-



jecting lugs for alignment with the lugs of the frying pan, and means engaging the lugs of the inverted pot and the frying pan tightly to clamp the assembled utensils together.

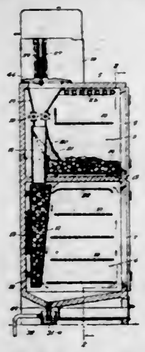
2,449,130
ACID CHROMABLE MONOAZO DYESTUFFS AND A PROCESS OF MAKING SAME
Adolf Krebser, Riehen, and Werner Kuster, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm
No Drawing. Application March 10, 1945, Serial No. 582,184. In Switzerland November 23, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 23, 1963
6 Claims. (Cl. 260—199)

1. A process for the manufacture of an acid chromable monoazo dyestuff which comprises coupling in an acid solution 2-amino-8-hydroxy-naphthalene-6-sulfonic acid of the formula



with a diazotised amine of the formula

wherein Y stands for a radical of the benzene series containing at least one o-hydroxy-carboxy grouping and Z means a member selected from the group consisting of H and Cl.

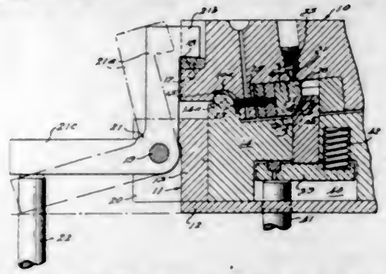


2,449,131
RACK ATTACHMENT FOR LAUNDRY TUBS
Leslie W. Larson, St. Paul, Minn.
Application June 25, 1945, Serial No. 601,533
2 Claims. (Cl. 248—150)

1. A rack adapted to be supported on the inclined front wall of a laundry tub comprising, spaced, parallel wall engaging members adapted to extend at an incline and in engagement with the inclined outer surface of said wall, tub engaging hooks projecting from the upper end portions of said members to support them on said wall, parallel platform members pivotally connected to the lower end portions of said wall engaging members respectively and tension members depending from said wall engaging members for supporting said platform members in substantially horizontal position, said tension members being positioned beneath the overhang of

said wall and said platform members projecting to the front of said wall and tension members to support a receptacle approximately at the elevation of the tub bottom.

2,449,132
REFRIGERATOR FOR MAKING AND USING CRUSHED ICE
Louis V. Lucia, West Hartford, Conn.
Application September 22, 1944, Serial No. 555,275
5 Claims. (Cl. 62—2)



1. In a refrigerating system, the combination of a cabinet having a storage compartment and a cooling compartment therein, an electrically operated machine for producing ice positioned above said cabinet and adapted to deliver pieces of ice through an opening in the top of said cabinet, a chute extending downwardly within said cabinet, means in said storage compartment for receiving ice from said chute, and means in said chute responsive to the quantity of ice in said compartments for deflecting the ice from said chute.

2,449,133
PRESS
Fred Lyijynen, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application April 28, 1945, Serial No. 590,795
5 Claims. (Cl. 18—42)

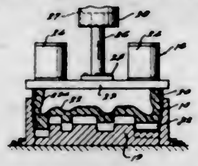
5. Molding mechanism for forming a plastic article, comprising upper and lower mold members adapted to be relatively moved in a vertical direction into open and closed positions, a punch, a slide carrying said punch, said slide being mounted in the upper mold member and being shiftable transversely to the direction of the

opening and closing of the mold members to cause said punch to penetrate said article, means including a cam carried by the lower mold member and movable in the direction of the opening and closing of the mold members for cooperating with

said slide to shift it transversely, and a fluid actuated plunger reciprocable through the lower mold member for moving said cam, said cam and said slide having an operative connection therebetween adapted to permit separation of the cam and slide when said mold members are opened.

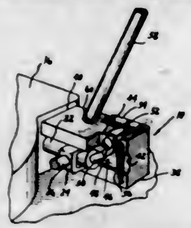
2,449,134
VENTILATING AND FLUSHING APPARATUS FOR WATER CLOSETS
Charles J. Majauskas, Chicago, Ill.
Application March 7, 1947, Serial No. 733,024
1 Claim. (Cl. 4—213)

For use with a water closet having a seat hinged thereto, a pipe connecting said water closet with a source of supply of flush water, said pipe being normally closed at one end by the flush water control valve and open into the closet bowl at the other end thereof, an air passage connecting said pipe and a waste vent, a mechanical blower in said air passage to draw gases from said bowl and discharge the same into said vent, said blower being operated during such time as pressure is applied to the seat of said water closet, a valve in said passage to restrict the flow of gas through said passage during the time said blower is not in operation, a second valve in said passage adjacent to said pipe, said second valve being normally open, and a pivoted lever in said pipe operatively connected to said second valve, said lever being substantially smaller than the internal diameter of said pipe and being positioned to only partially obstruct the flow of water through said pipe whereby only a flow of water through said pipe sufficient to substantially fill said pipe will actuate said pivoted lever and close said second valve.



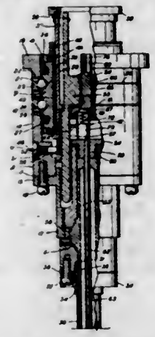
2,449,135
CAR-END PLATFORM BUFFING MECHANISM
Roland J. Olander, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application August 25, 1945, Serial No. 612,614
10 Claims. (Cl. 213—222)

1. In a buffing mechanism for a railway car including an end platform, the combination with a buffer face plate; of a buffer stem supporting said face plate from the end platform, said face plate having an opening therethrough in alignment with the buffer side stem, said opening being of a size to permit lengthwise withdrawal of the buffer side stem therethrough; a detachable



supporting bracket blocking said opening; and a pin pivotally connecting the buffer side stem to said bracket and face plate for relative swinging movement in a horizontal plane, said pin extending through the face plate and bracket and the forward end of the buffer stem.

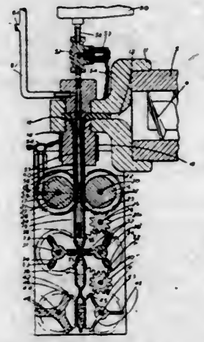
2,449,136
METHOD OF MAKING MOLDS
Herbert J. Pattison, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application January 1, 1945, Serial No. 570,929
4 Claims. (Cl. 22—193)



1. In the method of producing a plaster mold, the steps of spraying under pressure a wet plaster mixture over a pattern within a flask to provide a shell mold and at the same time embedding a member in the upper edge of the mold formed of magnetizable metal, and removing the mold from the flask by magnetic action on said member.

2,449,137
FUEL INJECTOR CONTROL DIAL GAUGE
Robert W. Petersen, San Bernardino, Calif.
Application June 17, 1946, Serial No. 677,303
5 Claims. (Cl. 116—124)

5. A gauge for adjusting control racks of fuel injection pumps, comprising a block having an end adapted to abut the housing of a fuel pump rack bar, a recess receiving the end of a rack bar, a pointer pivoted to said block and having a terminal engageable by said end of a rack bar, a spring biasing said terminal towards said rack bar and a scale disposed in predetermined calibrated position relative to said pointer, said recess comprising a semi-cylindrical groove embracing the end of said rack bar protruding from said housing, said block having laterally recessed shoulders at its outer extremity upon a vertical plane axial of said groove, said pointer being pivoted to one of said laterally recessed shoulders, and a handle, and said scale and handle being both detachably secured to the upper surface of said block.



2,449,138
ROTATABLE ELECTRICAL CONNECTION
Dwight M. Phillips, Fullerton, Calif., assignor to Chiksan Tool Company, Brea, Calif., a corporation of California
Application July 5, 1943, Serial No. 493,544
6 Claims. (Cl. 173—324)

1. An electrical connection including two tubular sections telescoping one within the other, one section being a bearing sleeve and the other a jacket around the sleeve, anti-friction members between the interior of the jacket and the exterior of the sleeve keying the sections together against relative axial movement and connecting the sections for free relative rotation, means for securing a conductor to the jacket section, an elongate tubular conducting nipple extending centrally through the bearing sleeve and adapted to be secured to another conductor, means around the nipple rigidly securing the nipple in the bearing sleeve and including electrical insulation insulating the nipple from said sleeve, and contact means within one of the sections remote from the anti-friction members maintaining electrical connection between the nipple and the jacket section.

2,449,139
APPARATUS FOR MANUFACTURING AND FILLING CAPSULES
Kurt Posner, London, England, now by change of name John Kennedy Power
Application July 6, 1945, Serial No. 603,542
In Great Britain July 8, 1944
6 Claims. (Cl. 18—5)

1. An apparatus for manufacturing and filling containers made of plastic material comprising means for continuously extruding a tube made of plastic material, said extruding means including an extrusion nozzle adapted to be, in operation, directed downwards, guide rollers for feeding the extruded tube through at least part of the apparatus, means on said guide rollers for applying a marking on the wall of the tube, means for intermittently applying heat and pressure to the tube to close the tube, a hollow mandrel passing through the orifice of said nozzle and extending downwards from said nozzle, a tubular member arranged coaxially with said mandrel within said nozzle so as to form two passages, one being defined by the outer surface of said tubular member and the inner surface of said hollow mandrel, and the other by the inner surface of said tubular member, means adapted to communicate with one of said passages for storing material to be filled into the tube, means for effecting and interrupting the communication between said storing means and said one pas-

sage, means communicating with said other passage for controlling the pressure in said tube, means for cutting the tube, and means for timing the operation of the extruding means, guide rollers and marking means, cutting means, and closing means.

2,449,140
METHOD OF ENHANCING THE YIELD OF VITAMINS IN FERMENTATIONS
Henry L. Pollard, Nelson E. Rodgers, and Reginald E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California
No Drawing. Application November 11, 1944, Serial No. 563,082
4 Claims. (Cl. 195—42)

1. In a process for manufacturing a vitamin concentrate including the steps of synthesizing riboflavin by fermenting with *Clostridium acetobutylicum* a material selected from the group consisting of skim milk and whey, the improvement comprising providing said material in a form containing from about 0.56 to about 2.24 parts per million of iron in excess over the natural 0.1 to 0.21 part per million iron content of said material and incorporating a soluble ammonium salt with said material, the amount of soluble ammonium salt being so adjusted as to provide from about 1 to about 5 parts per million of ammonium radical when the excess iron content ranges from about 1.12 to 2.24 parts per million and to provide from about 180 to 450 parts per million of ammonium radical when the excess iron ranges from 0.56 to 1.12 parts per million.

2,449,141
PRODUCTION OF RIBOFLAVIN BY FERMENTATION PROCESSES
Henry L. Pollard, Nelson E. Rodgers, and Reginald E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California
No Drawing. Application November 11, 1944, Serial No. 563,085
2 Claims. (Cl. 195—42)

1. In the process for manufacturing a vitamin concentrate including riboflavin by fermenting with *Clostridium acetobutylicum* a material selected from the group consisting of whey and

skim milk the improvement comprising incorporating with said material from 0.003 to 0.2% magnesium in the form of a soluble magnesium salt, the iron content of said material in excess of the 0.10 to 0.21 parts per million natural iron content of said material being kept within the range of 0.5 to 4.5 parts per million and not higher than 2 parts per million when at least 0.12% magnesium is added, thereafter sterilizing said material and inoculating said material with a culture of *Clostridium acetobutylicum*.

2,449,142

METHOD FOR IMPROVING THE YIELD OF RIBOFLAVIN IN FERMENTATION PROCESSES

Henry L. Pollard, Nelson E. Rodgers, and Reginald E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California

No Drawing. Application December 1, 1944, Serial No. 566,247
4 Claims. (Cl. 195—42)

1. In a process of manufacturing a vitamin concentrate including riboflavin by fermenting a lactose-containing lacteal material with *Clostridium acetobutylicum* in the presence of a soluble iron compound, the improvement comprising incorporating with said material from 0.15 to 3.5 parts per million of zinc in the form of a soluble zinc salt and maintaining in said material an iron concentration of from 1.10 to less than 4.5 parts per million.

2,449,143

FERMENTATION METHOD FOR PREPARING A VITAMIN CONCENTRATE

Henry L. Pollard, Nelson E. Rodgers, and Reginald E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California

No Drawing. Application December 1, 1944, Serial No. 566,248
3 Claims. (Cl. 195—42)

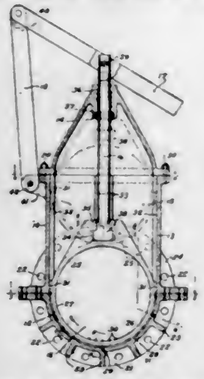
1. In the process of manufacturing a vitamin concentrate including riboflavin by fermenting a lactose-containing lacteal material with *Clostridium acetobutylicum* in the presence of from 0.5 to less than 4.5 parts per million of iron, the improvement comprising incorporating with said material from 0.05 to 20 parts per million of manganese in the form of a soluble manganese salt.

2,449,144

METHOD OF PREPARING A VITAMIN CONCENTRATE

Nelson E. Rodgers, Henry L. Pollard, and Reginald E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif., a corporation of California

Application November 11, 1944, Serial No. 563,084
4 Claims. (Cl. 195—44)



1. In a fermentation process for the manufacture of a vitamin concentrate including riboflavin by inoculating a sterile lactose containing lacteal material with a culture of *Clostridium acetobutylicum* developed from a stock culture by successive transfers to increasingly larger amounts of medium until a sufficiently large inoculum has been obtained, the improvement comprising incubating each culture of the series before transfer to a larger volume of medium until said culture has attained a titratable acidity of at least four milliliters of tenth normal acid per ten milliliters and not longer than five hours after the titratable acidity of said culture has reached its maximum value, after the last transfer continuing incubation of the resulting culture for from two to five hours after the titratable acidity of said last mentioned culture has reached its maximum value and then transferring the culture to said sterile lactose-containing material for initiating fermentation therein.

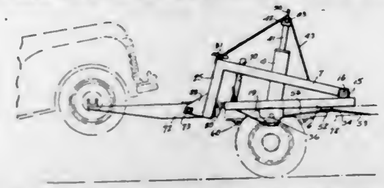
2,449,145

VALVE

John A. Rosmait, Appleton, Wis., assignor to D. J. Murray Manufacturing Co., Wausau, Wis., a corporation of Wisconsin

Application August 28, 1944, Serial No. 551,495
2 Claims. (Cl. 251—60)

1. In a gate valve, a body having a through passage and parallel guiding grooves extending tangentially away from said passage, a flat valve disc having opposite guide projections slidably engaging said grooves and also having a T-shaped open sided socket therein between said guide projections, said valve disc being of approximately uniform thickness throughout its entire area, an actuating stem for said disc having a T-shaped head of like thickness snugly confined within and insertable through an open side of said socket and also having a portion beyond said head of greater thickness than said valve, and parallel guide ridges on said body coacting directly with said stem head and said valve disc to retain the head within said socket and also forming guide recesses coacting with the adjacent enlarged portion of said stem.



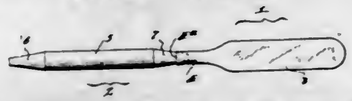
2,449,146

AUTO WRECKING CRANE

Clarence N. Ryan, Washington, D. C.

Application January 28, 1947, Serial No. 724,753
2 Claims. (Cl. 214—86)

1. In a unitary crane structure adapted to be carried on the rear end of a vehicle chassis including a lifting frame pivotally mounted at the forward end thereof and extending downwardly at the rear end, a load-engaging boom attached to the downwardly-extending free end of the lifting frame, a hydraulic power-transmitting device comprising a hydraulic cylinder carried upon said chassis having an upwardly-directed piston for raising the lifting frame, and means for supplying fluid under pressure to the hydraulic cylinder, the features which include a substantially rectangular supporting frame adapted to be directly mounted upon the chassis having a pair of pivot mountings at the forward end thereof to which the forward end of the lifting frame is pivoted and a pair of downwardly-pendent plates fixed within the sides of the supporting frame intermediate the forward and rear ends thereof, a transverse pivot shaft supported at the ends thereof in said pendent plates and supporting the lower end of said hydraulic cylinder intermediate said plates, the supporting frame except the downwardly-extending portion thereof being of substantially the same length as that of the lifting frame and the latter lying horizontally upon said supporting frame in normal lowered idle position thereof, at least one intermediately upwardly-peaked



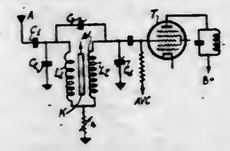
strap member connected at the lower rear end thereof to the rear end of said lifting frame and at the upper peak portion to the upper end of the hydraulic piston, a transverse brace fixed between the sides of said lifting frame intermediate the forward pivot end thereof and the transverse pivot shaft supporting the hydraulic cylinder, the lower forward end of said strap member being secured to the transverse brace, a second transverse brace fixed between the sides of said lifting frame intermediate said transverse pivot shaft and the rear end of the frame, an upwardly-directed movable supporting member pivotally mounted at the lower end thereof to the supporting frame intermediate said rear end of said supporting frame and the second transverse brace and having a series of notches in the upwardly-extending forward edge thereof adapted to be individually engaged by said second transverse brace to determine various positions of said lifting frame on its forward pivot mounting, and a manually-operated handle rigidly connected to said upwardly-directed movable supporting member for engaging the latter with and disengaging from said second transverse brace at will.

2,449,147

TOY

Lloyd William Samuels, Allentown, Pa.

Application March 22, 1947, Serial No. 736,529
3 Claims. (Cl. 46—90)



1. A toy comprising the combination with a balloon formed of stretchable elastic rubber which balloon is provided with a fluid inlet member; of a tubular device for inflating the balloon provided with a frontal tip of forwardly tapered configuration arranged so that the open end of said member may be frictionally mounted thereon in such manner as to effect self-disengagement of the balloon from the device when the inflating fluid within the balloon reaches a certain pressure.

2,449,148

PERMEABILITY TUNED IMAGE ATTENUATION CIRCUITS

William Francis Sands, West Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application December 30, 1942, Serial No. 470,543
4 Claims. (Cl. 250—20)

3. A circuit arrangement for the suppression of the image frequency response in superheterodyne receivers, comprising a transformer having coaxial primary and secondary windings which have a common low potential terminal connected to ground, a capacitance connected between the high potential terminals of said windings, a resonant circuit including said secondary and a shunt capacitance, and a ferromagnetic core movable relatively to said windings to tune said circuit to any desired signal within a range of frequencies, said primary being wound in the same direction as the secondary and with such varying pitch that at any position of said core the inductance of the series arm of the equivalent π network of said transformer forms with the first-mentioned capacitance connected thereto an image frequency rejector circuit which tracks with the tuning of the resonant circuit.

2,449,149

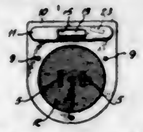
PLASTICIZED AND STABILIZED CELLULOSE COMPOUND AND A PROCESS OF MAKING IT

Ovid Santoro, Bloomfield, and Edwin Jaskot, Passaic, N. J., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application December 27, 1944, Serial No. 570,042
17 Claims. (Cl. 106—182)

1. A thermoplastic composition of matter comprising a cellulose derivative, selected from the group consisting of lower aliphatic acid esters of cellulose and cellulose ethers, and at least one plasticizer selected from the group consisting of triphenyl phosphate and phenyl salicylate, said composition being stabilized by having incorporated therein from 0.1 to about 5%, based on the weight of the cellulose derivative, of a salt selected from the group consisting of alkali metal and alkali-earth metal salts of hydroxy aliphatic mono carboxylic acids.

2,449,150



PORTABLE INDICATOR DEVICE FOR ORDINARY TWO PRONG PLUGS

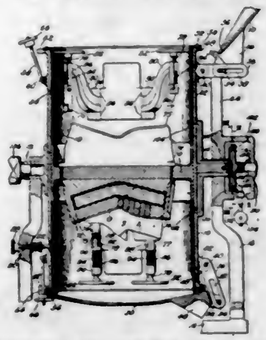
Nathan Schnell, Palisade, N. J.

Application November 19, 1945, Serial No. 629,429
7 Claims. (Cl. 177—311)

1. Means for furnishing a positive indication that potential is available at the prongs of an ordinary electrical appliance plug when inserted

into a wall socket, comprising a relatively small, portable lamp indicator adapted for insertion between the cover plate of a complete wall socket and an ordinary two-prong electrical appliance, said lamp indicator comprising a wafer-like insulating sheet having a pair of spaced apertures through which the prongs of an ordinary two-prong plug may be passed to enter the cover plate

of a complete wall socket, contact springs positioned entirely below the inner and outer flat surfaces of said insulating sheet and in said apertures and adapted to make electrical contact with said prongs, a lamp permanently mounted on said sheet, and connections from the electrodes of said lamp to said contact springs, said lamp indicator being devoid of means for permanent attachment to the outlet socket.



2,449,151

CEMENT SOLE ATTACHING APPARATUS

Malcolm Seymour, Boston, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application May 15, 1946, Serial No. 669,854

18 Claims. (Cl. 12—37)

7. Apparatus for cement-attaching soles to shoes comprising a cylinder open at both ends, trunnions on the cylinder at right angles to its longitudinal axis, supports for the trunnions to permit rotation of the cylinder to position either end uppermost, a piston in the cylinder, a closure for each end of the cylinder, means for admitting air to the upper end of the cylinder, means for exhausting air from the lower end of the cylinder to cause downward movement of the piston by atmospheric pressure, and means for causing such movement of the piston to apply pressure to a shoe and sole.

2,449,152

SEPARATION OF MONOETHANOL AMINE FROM ADMIXTURES BY AZEOTROPIC DISTILLATION WITH CHLOROBENZENE

John C. Speck, Jr., Bloomington, Ind., assignor to the United States of America as represented by the Secretary of the Navy

No Drawing. Application March 26, 1946, Serial No. 657,329

3 Claims. (Cl. 202—42)

3. The method of separating monoethanolamine from a mixture containing diethanolamine, consisting in adding monochlorobenzene to form an azeotrope with the monoethanolamine, and then distilling out the azeotrope.

2,449,153

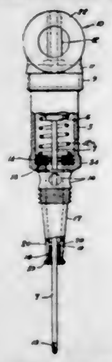
PHOTOGRAPHIC SILVER BROMIDE EMULSION SENSITIZED WITH CYSTEINE

Franz Urbach, Rochester, N. Y.

No Drawing. Application April 3, 1944, Serial No. 529,414

6 Claims. (Cl. 95—7)

1. A photographic silver-bromide emulsion containing cysteine.



2,449,154

DEVICE FOR MENDING STOCKINGS

Marcel Vitoux, New York, N. Y., assignor to American Vitos Company, Inc., New York, N. Y., a corporation of New York

Application November 20, 1946, Serial No. 711,167

5 Claims. (Cl. 66—1.5)

1. In a pneumatic mending device having a cylinder and a finger grip at one end of said cylinder; a longitudinally perforated bushing frictionally yet rotatably mounted at the opposite end of the cylinder, and a needle extending through said bushing slidable through said opening but non-rotatable relatively thereto so that by rotating the bushing in the cylinder, the needle will be rotated therewith relative to the finger grip.

2,449,155

SPEED AND ODOMETER INDICATING DEVICE

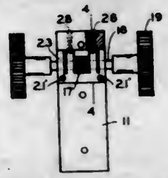
Brooks Walker, Arlington, Va.

Application February 5, 1944, Serial No. 521,218

1 Claim. (Cl. 116—114)

In a vehicle body having a windshield from which a panel extends rearwardly and downwardly within the body, a speed indicating and odometer device supported beneath and forward of said panel in spaced relation thereto, an indicating hand extending from said speedometer, a transparent element containing dial indications

enclosing said hand and attached to said device and projecting through an opening in the rearwardly extending portion of said panel into the vicinity of said windshield, a mirror on said element, and a second mirror supported on said device for transferring the reading of said odometer through an opening in said panel to the mirror on said element.



2,449,156

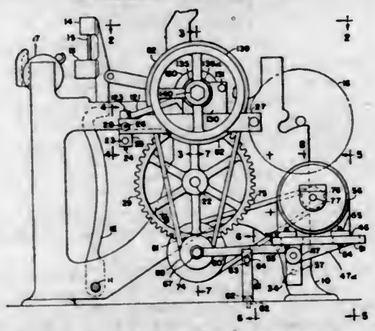
ADJUSTABLE PINION SHAFT BEARING FOR MICROSCOPES

Carl H. O. Wittig, Irondequoit, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

Application January 5, 1946, Serial No. 639,342

4 Claims. (Cl. 88—39)

1. A microscope comprising a stand, a tube slidably mounted on the stand, a lens system carried by the tube, means for moving the tube to focus the lens system, said means comprising a rack carried by the tube, said stand having a part provided with a recess adjacent the rack, a shaft rotatably mounted in a bearing seat formed in the wall of the recess, a pinion carried by the shaft, said pinion engaging the rack for moving the latter, and means for varying the frictional resistance against which the shaft may be turned, said means comprising a member secured in said recess, spaced resilient fingers integral with said member and extending upwardly therefrom, said fingers frictionally engaging the side of said shaft, the upper ends of said fingers having inclined portions, and screws threaded into the stand above said recess, said screws having tapered ends in engagement with said inclined portions whereby the frictional resistance on said shaft may be selectively varied by adjusting said screws.



2,449,157

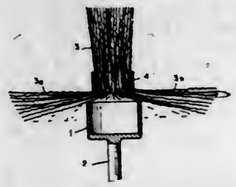
DRIVING MEANS FOR LOOMS

William H. Bahan, Greenville, S. C.

Application November 28, 1947, Serial No. 788,751

6 Claims. (Cl. 139—1)

6. In a loom having a side frame and a crank shaft and a cam shaft mounted for rotation therein, an electric motor having a driving pulley, a hub portion rotatably mounted adjacent the motor and having a second pulley and a third pulley integral therewith, a gear fixed on the crank shaft and having a clutch face on the outer side thereof, a fourth pulley slidably and rotatably mounted on the crank shaft and having a clutch face on its inner side for engaging the clutch face on the gear, a gear mounted on the cam shaft and meshing with the gear on the crank shaft, a belt mounted on the driving pulley and second pulley and a belt mounted on the third and fourth pulleys, said loom having a shipper rod and means associated with the fourth pulley and the shipper rod for moving the last two clutch faces into clutching relation when the shipper rod is moved to operative position, and means for moving the fourth pulley away from the gear on the crank shaft when the shipper rod is moved to inoperative position.



2,449,158

END BRUSH AND METHOD OF MAKING

John B. Benyak, Cleveland, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

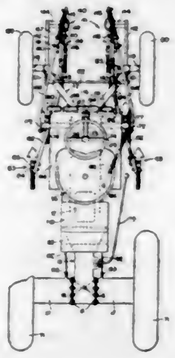
Application January 13, 1944, Serial No. 518,085

3 Claims. (Cl. 15—205)

3. A rotary end brush comprising a cup-shaped holder, and an annular retaining member having stranded brush material doubled thereabout seated axially within said holder with both ends of such strands extending therefrom, the edge portion of said cup-shaped holder being constricted to secure said annular member and associated brush material against axial withdrawal, and the sides of said holder being flanged inwardly toward said annular inner member to laterally compress such brush material therebetween and thus frictionally resist the tendency of said retaining member and brush material to turn relative to said holder when said brush is rotated in contact with a work surface in use.

2,449,159

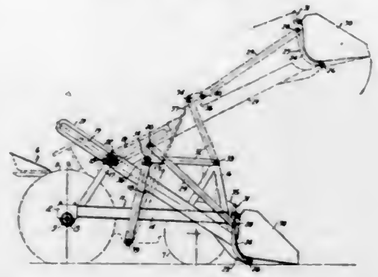
TRACTOR CULTIVATOR



Theophilus Brown, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

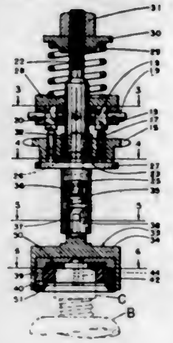
Original application September 17, 1942, Serial No. 458,712. Divided and this application February 3, 1945, Serial No. 576,026

14 Claims. (Cl. 97—47)



1. In a tractor cultivator, a frame, a front axle member connected thereto by means providing for relative lateral rocking movement about a fore and aft extending axis, wheels mounted at the outer ends of said axle member, a pair of cultivator supporting beams detachably secured to said axle member in laterally spaced relation and extending forwardly from said axle member, a pair of cultivator rigs disposed in laterally spaced relation under said axle member, and generally forwardly extending means for connecting

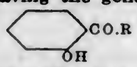
said rigs to the forward portions of said beams, respectively, providing for vertical movement of



said rigs relative to said beams generally underneath said axle member.

2,449,160
VEHICLE MOUNTED FRONT END LOADER
James B. Castle, Oakland, Calif., assignor to Reconstruction Finance Corporation, San Francisco, Calif., a corporation of the United States
Application April 2, 1946, Serial No. 658,907
3 Claims. (Cl. 214—141)

1. A front end loader for a vehicle comprising a frame mounted on said vehicle and including a frame member extending fore and aft along each side of said vehicle, a support frame at the forward end of each frame member, an arm extending upwardly at the rear end of each frame member, a bucket, a bucket support frame, a pair of bucket support arms carrying said bucket support frame at one end, each of said support arms being slidably supported by one of said arms, and means for raising and lowering said bucket support arms comprising a pair of cylinders each supported from said vehicle and having a piston therein on a piston rod, a pair of bell cranks each hinged at one end on one of said support frames, a pair of levers each connected at one end to one of said bell cranks and at its other end to said bucket support frame, and means hingedly connecting a piston rod to an intermediate point on a bucket support arm and to an intermediate point on a bell crank whereby upward movement of said piston rod is effective to lift said bucket support arms upwardly and move them forwardly on the slidable support provided for said bucket support arms by said arms.



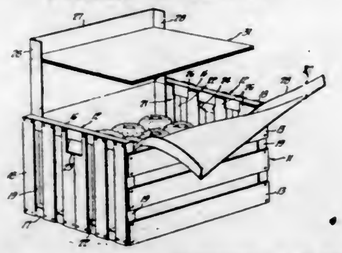
2,449,161
BOTTLE CAPPER
Ralph P. Craig, Los Angeles, and John W. Norgauer, Hollywood, Calif.
Application December 26, 1945, Serial No. 637,181
2 Claims. (Cl. 226—88)

1. In a bottle capper for applying screw caps, chuck means for the caps comprising a recessed casing having a stem adapted to be at times rotated by a clutch means actuated by rotary means, a recessed disk body adapted to turn in the recess of said casing, and having a fixed segment of a clamping ring attached around the rim of said recess, a segmental clamping ring member hinged to said body in position to complete a ring clamp, said hinged member being also pivoted at the end opposite the said hinged end to said casing, and a split rubber clamping ring within said clamping ring members.

2,449,162
PROCESS FOR THE PRODUCTION OF CYCLIC LACTONES
Haydn Geoffrey Dickenson, Warrington, England, assignor to Ward, Blenkinsop & Company Limited, London, England, a British company
No Drawing. Application February 8, 1947, Serial No. 727,311. In Great Britain February 7, 1946
Section 1, Public Law 690, August 8, 1946
5 Claims. (Cl. 260—344.6)

1. A process for the production of a coumarin which comprises treating an ortho-hydroxy acylophenone, having the general formula

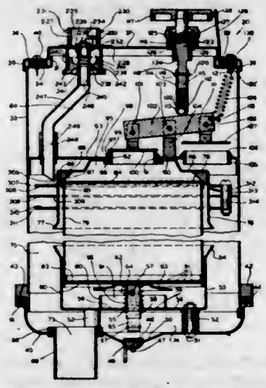
in which R is a lower alkyl group with a carbonate having the general formula $CO.(OR^1)_2$ in which R^1 is selected from alkyl and aralkyl groups in the presence of an alkali metal alcoholate and treating the product with acid to liberate said coumarin.



2,449,163
PROCESS FOR THE PREPARATION OF ALPHA, ALPHA-DIALKYL BETA-CHLORO-PROPIONIC ACIDS
Thomas Aven Ford, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 2, 1946, Serial No. 687,961
7 Claims. (Cl. 260—539)

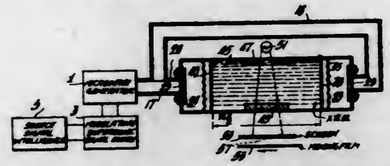
6. Process for the preparation of beta-halogenopropionic acids which comprises bringing, as the sole olefinic reactant, an olefinic compound of the formula

$$RCH{=}C(CH_3)CH_2X$$



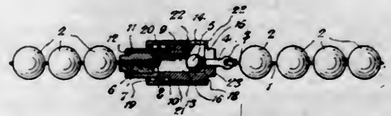
wherein X is a halogen selected from the 2d and 3d periods of the periodic table and R is selected from the class consisting of hydrogen and alkyls of one to six carbons, under a carbon monoxide pressure of at least 200 atmospheres in contact, at 50–200° C., with a hydrated strong acid catalyst.

2,449,164
PACKING OF LETTUCE AND PACKAGE
Alfred B. Haslacher, San Francisco, Calif.
Application April 2, 1946, Serial No. 659,078
5 Claims. (Cl. 99—171)



5. A lettuce package consisting of a wooden crate having opposite end sections, at least one of said sections including spaced end posts and a top and bottom cleat forming a frame inside said crate; an air circulation member mounted in said frame and having vertical flutes therein, at least two tiers of lettuce heads positioned in said crate with the butts upward, a laminated separator sheet having at least one corrugated inner layer and positioned on top of the butts in the subjacent lettuce tier, a water-proof liner in said crate between said ends surrounding the tiers of lettuce except at the ends of the crate, and a lid for said crate.

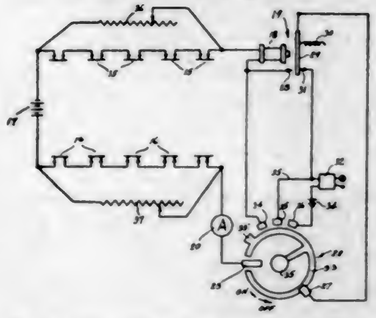
2,449,165
AIRBORNE ANESTHETIZING APPARATUS
Jay A. Heidbrink, Minneapolis, Minn., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application May 8, 1944, Serial No. 534,642
8 Claims. (Cl. 128—191)



7. An anesthetizing apparatus, comprising an anesthetizing head, a transverse partition therein forming an upper chamber and a lower chamber on the head, a soda lime container having perforated ends and being removably supported in the lower chamber so as to leave a space of large cross sectional area about and across the lower end of the same, a re-breathing bag connected with said space, a breathing line having breathing connection of the inhalation side with said space and not said upper chamber and having breathing connection of the exhalation side with the upper chamber, said partition having a port and connecting passageway going to the upper end of the soda lime container and a second port and passageway going to said space, a centrally pivoted bar and a valve on each end thereof, and means including a spring acting upon one end of the bar and a hand operated stem acting on the other end of the bar for swinging the bar on its pivot to open one port and close the other port simultaneously to any degree desired, thereby to control the movement of exhalation gas from the upper chamber so it may wholly or in part pass through said space to the re-breathing bag or may wholly or in part pass through the soda lime container to the re-breathing bag.

2,449,166
MICROWAVE-ACOUSTIC LIGHT VALVE
William D. Hershberger, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application June 15, 1944, Serial No. 540,429. Divided and this application May 14, 1945, Serial No. 593,608
4 Claims. (Cl. 179—100.3)

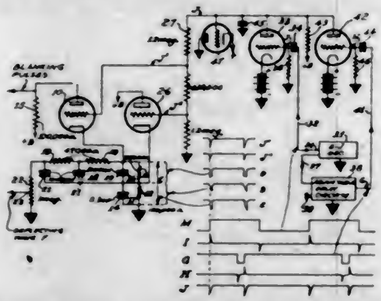
1. A light valve for indicating microwave modulation characteristics including a chamber for confining a microwave absorptive gas, means for irradiating said gas by modulated microwaves of a frequency absorbed by said gas to provide pressure variations in said gas characteristic of said modulation, a fluid medium having light transmission characteristics dependent upon pressure variations therein, and means for transmitting said pressure variations in said gas to said medium.



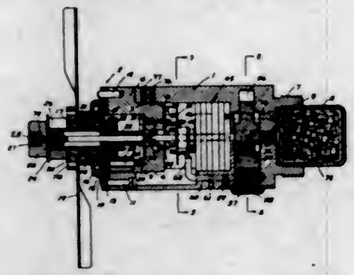
2,449,167
HEAD AND SOCKET SEPARABLE SAFETY FASTENER
Lester H. Hopewell, Brooklyn, N. Y.
Application May 8, 1946, Serial No. 668,275
3 Claims. (Cl. 24—223)

1. A clasp comprising a cylindrical body member, a sleeve surrounding said body member and rotatable thereon, and a coupling member having a shank and an enlarged head, said body member having an interior recess, an aperture through its side wall opening into said recess,

and a slot in its end wall opening into said recess and into said aperture, said sleeve having an aperture in its side wall and a slot in its end wall opening into said aperture, the aperture and slot of the sleeve being adapted to register with the aperture and slot of the body member in one position of rotation of said sleeve with respect to said body member to enable the head of said coupling member to be inserted in and withdrawn from said recess.



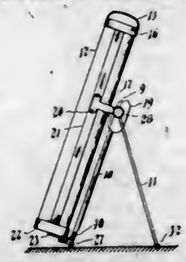
2,449,168
ELECTRICAL ALARM SYSTEM
James J. Kertz, Jamaica, N. Y., assignor to Maurice Coleman, Brooklyn, N. Y.
Application November 18, 1947, Serial No. 786,653
3 Claims. (Cl. 177—314)



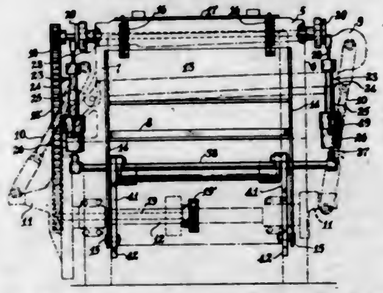
2. In an electrical alarm system of the character described, a protective circuit including protective switch means adapted to be in closed condition when the system is set into operative condition, a relay and a source of electrical energy in series electrical connection with said switch means in said protective circuit, an alarm circuit controlled by said relay and high electrical resistance means shunting only said switch mechanism; said resistance means being characterized in that upon a momentary break occurring in the shunted portion of the protective circuit after the system is set into operative condition, sufficient current will flow in the protective circuit to augment the action of the residual magnetism in the relay core to maintain the armature of the relay in its attracted position during such momentary continuance of such break to avoid operation of the alarm circuit during such momentary continuance of said break, and further characterized in that while said armature is in released position the current flowing in the protective circuit is insufficient to actuate the relay to attract the armature during any break in said switch means in the protective circuit.

2,449,169
DEFLECTING CIRCUITS
Loren R. Kirkwood, Oaklyn, N. J., and Paul F. G. Holst, Mount Healthy, Ohio, assignors to Radio Corporation of America, a corporation of Delaware
Application June 4, 1946, Serial No. 674,184
11 Claims. (Cl. 250—27)

11. A cathode-ray deflection wave circuit comprising a vacuum tube having an anode, a cathode and a control grid, a plurality of resistor-capacitor circuits having different time constants and connected in series with each other, said series connected circuits being connected in series with the cathode-anode impedance of said tube, means for supplying direct current to said circuits through said tube for charging the capacitors of said circuits to a predetermined direct-current potential, a second vacuum tube having an anode, a cathode and a control grid, the cathode of said second tube being connected to a junction point of said series connected resistor-capacitor circuits whereby a portion of said circuits may be charged through said second tube, means for interrupting periodically the flow of charging current through said tubes to said circuits, and means for applying the sum of the voltages that appear across said circuits during said periods of current interruption to a utilization circuit, said means for interrupting periodically the flow of charging current comprising means for producing a first group of periodically recurring pulses, means for producing a second group of periodically recurring pulses that are displaced in phase with respect to said first group, a pair of vacuum tubes having input electrodes to which said first and second groups of pulses are applied, respectively, said pair of tubes having a common output resistor whereby said first and second group of pulses are combined, a direct-current connection from said output resistor to the control grids of the first and second vacuum tubes, and a clipping diode connected between said direct-current connection and ground.



2,449,170
BOMB FUSE
John B. MacLean and Max E. Schlenker, Peru, Ill., assignors to General Time Instruments Corporation, New York, N. Y., a corporation of Delaware
Application November 8, 1943, Serial No. 509,394
4 Claims. (Cl. 102—84)



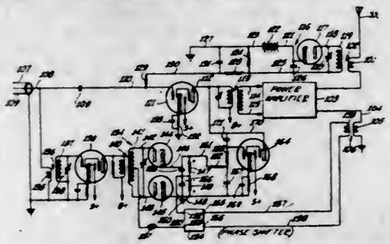
1. In a bomb fuze, a spring biased firing pin, a latch for holding said pin in cocked position, a mechanical time movement and a cam driven thereby, means controlled by said cam for releasing said latch, detonator carrying means and means for moving same to armed position, and a second cam driven by said time movement for releasing said detonator carrying means.

2,449,171
GOLF BAG STAND
Daniel Matthews, Toronto, Ontario, Canada
Application October 9, 1947, Serial No. 778,835
4 Claims. (Cl. 248—96)

1. A golf bag stand comprising a frame, and legs carried thereby for spreading from a normally closed position to an open position, one of the legs being slidably mounted alongside of the bag and having a lower end projecting below the bottom thereof, another of the legs being pivotally mounted to swing away from the bag to an open position, a pivot bar rigid with the pivoted leg, an arm rigid therewith having a distal end loosely engaged in an aperture formed in the slidable leg whereby a receding movement of the slidable leg is operative to swing the pivoted leg to open position.

2,449,172
CLAMPING MECHANISM
Robert L. McBride, New York, N. Y.
Application January 16, 1946, Serial No. 641,559
4 Claims. (Cl. 164—51)

1. In a paper cutting machine, the combination of a motor, a support for a pile of paper to be cut, a reciprocal knife, mechanism for moving said knife into engagement with the pile of paper for cutting same including a crank shaft operatively connected to the motor, a reciprocal clamp member and hydraulically actuated mechanism for moving said clamp into engagement with the pile of paper and subsequently exerting a pressure thereupon for compacting the paper and holding same firmly during the cutting operation, said hydraulically actuated mechanism including a rotatable cam member, a casing containing fluid under pressure, pistons in said casing, one of said pistons being operatively connected to the cam member and movable thereby and the other pistons being movable under the influence of the fluid moved by the cam actuated piston and means of connection between one of the fluid movable pistons and the clamp member for moving said clamp member.



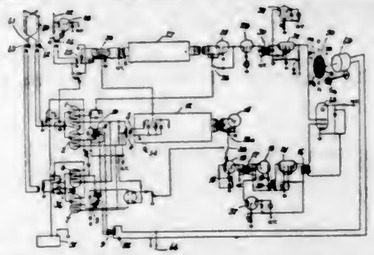
2,449,173
ALKENYL SULFOLANYL AND SULFOLENYL CARBONATES
Rupert C. Morris, Berkeley, and Edward C. Shokal, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 13, 1945, Serial No. 604,974
9 Claims. (Cl. 260—329)

5. The compounds of the general formula

$$X-O-\overset{\overset{O}{\|}}{C}-O-Y$$

wherein X is a radical of the group consisting of the sulfolanyl radicals and the sulfolenyl radicals, and Y is an alkenyl radical.

2,449,174
ANTENNA SUPPLY PHASE AND AMPLITUDE CONTROL
William J. O'Brien, Los Angeles, Calif., assignor to The Decca Record Company, Limited, London, England, a corporation of Great Britain
Application April 13, 1942, Serial No. 438,712
7 Claims. (Cl. 250—17)



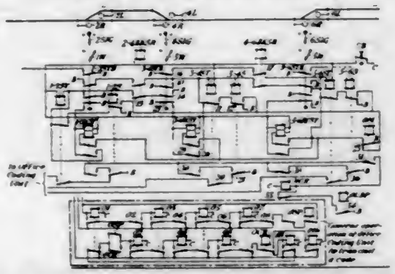
2. In a radio frequency transmitting apparatus, the combination of: a source of radio frequency energy; a transmitting antenna having a transmission resistance; a circuit coupling said antenna to said source; and a device for compensating for changes in said transmission resistance comprising a variable series resistance in said circuit, actuating means operable to vary said resistance, control means responsive to changes in magnitude of antenna current, and means coupling said control means to said actuating means for varying said resistance in accordance with said changes in magnitude of said antenna current.

2,449,175
RADIO DIRECTION FINDER
William Joseph O'Brien, London, England, assignor to The Decca Record Company, Limited, London S. W. 9, England, a corporation of Great Britain
Application July 24, 1944, Serial No. 546,248
In Great Britain May 13, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 13, 1963
5 Claims. (Cl. 343—121)

1. A radio direction-finder comprising two fixed receiving antennae arranged with their directional properties in a required angular relation-

ship, two electronic devices, means for applying high-frequency signal potentials built up in the two antennae respectively to the control electrodes of said electronic devices, means for generating two low-frequency A. C. signals of identical frequency but out-of-phase to a degree corresponding to said angular relationship of the two antennae, means for applying the two out-of-phase A. C. signals respectively to said electronic devices so as to modulate the high-frequency signals, each of which electronic devices is arranged to provide a reversal of phase of the modulated signal due to reversal of

polarity of the applied A. C. signal, means for combining the resulting out-of-phase modulated outputs of the electronic devices, a gas-discharge tube having ionisation control elements connected by a suitable circuit with the combined output of the two electronic devices so as to produce ionisation voltage surges as varying phase-time points in said combined signal according to the relative amplitude of the two high-frequency signals, and means driven in synchronism with the A. C. supply and illuminated by the gas-discharge tube so as to indicate in a stroboscopic manner the positions of the surges in each cycle.



2,449,176

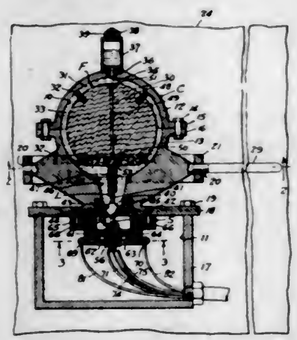
RECALL CONTROL MEANS

Frank T. Pascoe, Carnegie, and Arthur L. Jerome, Edgewood, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application September 18, 1946, Serial No. 697,706

19 Claims. (Cl. 177—353)

1. In a remote control system of the type having an office and a plurality of field stations, the equipment at the office including a code transmitter for transmitting different control codes to said stations each comprising a first group of elements adapted to select a station and a second group of elements for operating movable devices at the selected station and also including recall means effective when actuated to interrupt the transmission of a code following the selection of a station and prior to operation of any of said movable devices, the equipment at each station including a code transmitter for transmitting indication codes to the office for indicating the condition of said movable devices and also including starting means for initiating the operation of the associated transmitter in response to a change in the condition of any of the movable devices at such station and also in response to said interrupted code provided the interrupted code includes the selecting elements to which such station is selectively responsive, control means for governing said recall means, said control means comprising for each station an auxiliary relay having contacts which normally occupy a first position, manually controlled circuit means effective when the operator actuates control devices to transmit a recall code to a selected station for moving the contacts of the auxiliary relay for that station to their second position, means for actuating said recall means when the office code transmitter transmits a code including the selecting elements designating a station and the contacts of the auxiliary relay for that station are in their second position, and means for each auxiliary relay effective subsequent to the transmission of the selecting elements of a code designating the corresponding station for causing the relay contacts to move from their second to their first position.



2,449,177

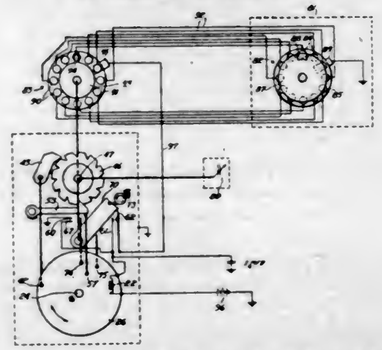
TILT-ACTUATED SWITCH

Leslie K. Perry, Los Angeles, Calif.

Application April 23, 1946, Serial No. 664,247

6 Claims. (Cl. 200—52)

1. In an instrument of the class described, means defining a chamber containing a liquid and adapted to be fixed to an aircraft; a buoyant body rotatable in said liquid and guided by the chamber wall with negligible friction; switch mechanism composed of a main contact and a plurality of motor contacts; means mounting said motor contacts in a circular series around the main contact, for unitary movement with the first means as the aircraft assumes various attitudes when in flight; a motion transferring element having a connecting portion and a portion carrying said main contact; means co-acting with said element to mount same for tilting movements in any direction about a fixed center on the first said means; and means co-acting with said connecting portion of said element and said body, to operatively connect them for tilting movement of the element to engage said main contact with a predetermined one of said motor contacts in accordance with the direction of the aforestated movement of the first said means.



2,449,178

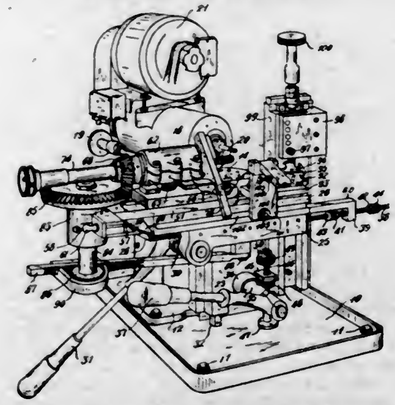
STEP-BY-STEP AUTOMATIC TUNING CONTROL

George L. Sansbury, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa

Application March 6, 1947, Serial No. 732,696

13 Claims. (Cl. 318—21)

1. An automatic shaft-positioning arrangement comprising an automatic selector switch of the line finder type, a step-by-step motor device for operating said switch and the shaft to be controlled, said motor device comprising a toothed wheel, a cooperating driving pawl, and a solenoid having its plunger connected to said pawl and provided with means to convert received selected impulses into a composite rectilinear and rotary movement of said plunger, the last-mentioned means comprising a disc attached to said plunger and having a plurality of camming guides and a cooperating ball for each guide for converting the reciprocal motion of said plunger into said composite movement, said driving pawl being attached to said disc.



2,449,179

MILLING MACHINE

Otto W. Scharping, Cleveland, Ohio, assignor to The Martindale Electric Company, Cleveland, Ohio, a corporation of Ohio

Application September 24, 1943, Serial No. 503,675

12 Claims. (Cl. 90—13.9)

1. In a milling machine of the character described, a rotating cutter held against bodily movement, a reciprocating bed, a work table mounted to swing on said bed, said table carrying a rotatable work spindle for supporting the work in engagement with said cutter, means for indexing said spindle, indexing means for varying the angle between said bed and table, and means dependent upon the reciprocation of said bed for rotating said spindle through a predetermined angle during each stroke of the bed, hand lever means for reciprocating said bed and simultaneously operable hand lever means for raising or lowering said bed.

2,449,180

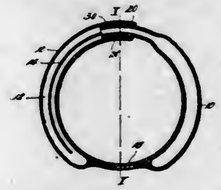
COMPOSITION OF PHENOL-RUBBER AND RESORCINOL-FORMALDEHYDE

Herman E. Schroeder, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 21, 1945, Serial No. 600,839

2 Claims. (Cl. 260—3)

1. A composition comprising a blend of a phenol-rubber and a heat-convertible resorcinol-formaldehyde resol, the phenol-rubber constituting 25% to 90% of the blend; the phenol-rubber being a reaction product of rubber and phenol containing 1% to 5% of the phenol chemically combined with the rubber, and the resol being the condensation product of resorcinol and formaldehyde solely.



2,449,181

NONREMOVABLE TRANSPARENT IDENTIFICATION BAND WITH A TAG THEREIN

John R. Smiley, Kansas City, Mo.

Application April 26, 1944, Serial No. 532,828

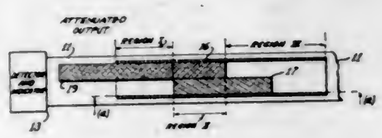
5 Claims. (Cl. 40—19)

4. A non-removable identification band comprising a flexible elongated transparent member having tubular end portions, one of said end portions being externally grooved and formed to telescope into the other of said end portions to form a closed band, an elastic band disposed in the groove formed in the outer wall of the inner telescoping end portion to engage the inner wall of the outer tube portion whereby to preclude relative movement of the telescoping tube portions in one direction, and an identification tag positioned in said tubular members.

2,449,182

DIELECTRICALLY TUNED WAVEMETER

Carl G. Sontheimer, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware



Application December 30, 1943, Serial No. 516,208

9 Claims. (Cl. 250—39)

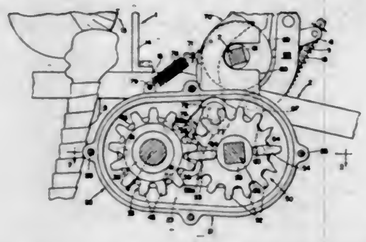
3. An adjustable microwave attenuator including a rectangular waveguide transmission system having a constricted portion thereof providing a region of relatively high attenuation at the operating microwave frequency and mode of wave propagation with a low-loss dielectric con-

stant fluid occupying only a predetermined rectangular cross-sectional portion having one dimension substantially coincidental with the electrical axis dimension of said constricted waveguide portion, a fixed relatively higher dielectric constant low-loss solid element extending for a predetermined distance along the remaining cross-sectional portion of said constricted portion, means for introducing microwave energy into said constricted waveguide portion, means for deriving attenuated micro-wave energy from said constricted waveguide portion, a movable high constant low-loss dielectric solid element proportioned to occupy said predetermined cross-sectional portion of said constricted portion and means for adjusting the longitudinal position of said movable element in said constricted portion intermediate said microwave energy introducing means and said deriving means for adjusting said attenuation of said derived microwave energy.

9. An adjustable microwave wavemeter device including a rectangular waveguide having a constricted portion providing a region of relatively high attenuation at the operating microwave

frequency and mode of wave propagation with a low dielectric constant low-pass fluid occupying only a predetermined rectangular cross-sectional portion having one dimension substantially coincidental with the electrical axis dimension of said constricted portion, a fixed relatively higher dielectric constant low-loss solid element extending for a predetermined distance along the remaining cross-sectional portion of said constricted portion, a movable relatively high constant dielectric low-loss solid element proportioned to occupy said predetermined cross-sectional portion of said constricted waveguide portion, means for adjusting the longitudinal position of said movable element in said constricted waveguide portion for effectively tuning said constricted waveguide portion, and an indicator coupled to said second microwave device and responsive to said microwave energy for indicating the resonance of said tuned device to said operating frequency.

2,449,183



POWER LIFT FOR GRAIN DRILLS

John H. Starr, Mayville, Wis., assignor to John Deere Van Brunt Company, a corporation of Wisconsin

Application January 15, 1944, Serial No. 518,461

17 Claims. (Cl. 97—244)

1. In a grain drill having an axle and a pressure shaft mounted in substantial parallelism, and tool means adapted to be connected with the latter, power lift means for the latter comprising a power unit adapted to derive power from said axle and deliver the same controllably to said pressure shaft and through the latter to said tool means to raise the latter, said power unit comprising a driving member, a driven member, and means for controlling the connection between said members, and means slidably but non-rotatably connecting said members, respectively, with said axle and said pressure shaft, whereby said

power unit may be disposed in different positions along said axle and shaft to raise said tool means.

2,449,184

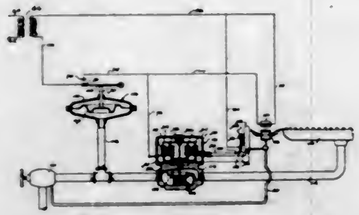
ORAL FLUORIDE-VITAMIN PREPARATION

Lyon P. Strean, Montreal, Quebec, Canada, assignor, by mesne assignments, to Ayerst, McKenna & Harrison Limited, New York, N. Y., a corporation of New York

No Drawing. Application March 8, 1944, Serial No. 525,591

3 Claims. (Cl. 167—55)

1. A dosage unit for topical oral therapy of exposed erupted caries-susceptible teeth, consisting of a lozenge adapted to be dissolved slowly in the saliva of the mouth, whereby the inner mouth surfaces including the surfaces of exposed erupted teeth are bathed with saliva containing dissolved constituents of the lozenge, said lozenge containing a major amount of excipients and a minor amount of active ingredients, said active ingredients comprising ascorbic acid, vitamin D and an amount of a fluoride selected from the group consisting of calcium fluoride and sodium fluoride not in excess of about 4 milligrams.



2,449,185

SAFETY CONTROL SYSTEM FOR FUEL BURNERS

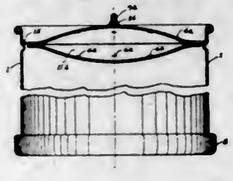
Max S. Unger, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware

Application June 5, 1944, Serial No. 538,864

8 Claims. (Cl. 158—117.1)

1. Safety control apparatus for fuel burners having main and pilot burners comprising in combination, control means operable for controlling the supply of fuel to the main burner and being biased to one controlling position, electromagnetic means including a plurality of coil means and a single armature movable relatively to said coil means between attracted and released positions, said electromagnetic means being operatively associated with said control means for overcoming said bias when at least one of said

coil means is energized sufficiently to hold said armature in said attracted position and said control means in another controlling position, means responsive to the presence of a flame at the pilot burner for energizing said one coil means sufficiently to hold said armature in said attracted position but insufficiently to cause said relative movement from released position, a source of current supply, means for energizing another one of said coil means from said source sufficiently to cause said relative movement of said armature from released to said attracted position, and means responsive to the said positioning of said control means and said armature upon said relative movement for rendering said last means inoperative while said armature remains held in said attracted position by energization of said one coil means.



2,449,186

SELF-OPENING CONTAINER

Nathaniel B. Wales, New York, N. Y., assignor, by mesne assignments, to Industrial Patent Corporation, New York, N. Y., a corporation of New York

Application February 17, 1945, Serial No. 578,451

10 Claims. (Cl. 220—47)

5. A hermetically sealed container, opened by the application of heat thereto, comprising a cover therefor, formed of two discs seam-welded circumferentially one to the other, to form a chamber therebetween, and means to inject and seal in said chamber a volatile fluid, a hermetical seal formed around the circumference of one of said discs, exterior to said chamber, sealing said container, and a scored ring section formed in said disc between the seam-weld therein and the seal made with the container, pressure responsive to a rise in temperature of said volatile fluid for expanding said chamber, and means actuated by the expansion of said chamber to sever said scored ring section in said cover.

2,449,187

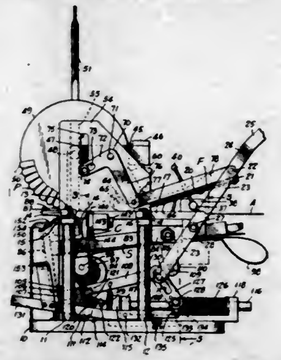
PROJECTING APPARATUS

George C. Walters, Rocky River, Ohio

Application December 6, 1944, Serial No. 566,941

5 Claims. (Cl. 124—13)

2. A device of the class described comprising a pair of telescopically associated tubes, the outermost of which is closed at one end and the other of which is open at both ends, and a cap detachably mounted on the outer end of the inner tube in sealing relationship therewith, said cap being adapted to be disengaged and propelled from the inner tube by virtue of air pressure generated by telescoping the inner tube within the outer tube.



2,449,188

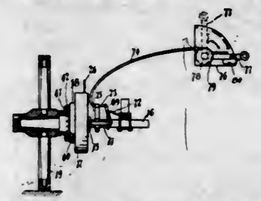
TICKET MARKING AND ATTACHING MACHINE

Clair B. Weller, Los Angeles, Calif., assignor of one-half to Duane C. Maddux, Los Angeles, Calif.

Application November 6, 1945, Serial No. 626,922

18 Claims. (Cl. 93—88)

2. In a machine of the class described, means defining a guideway for strip stock; stock feeding means; printing mechanism; means mounting said printing mechanism for movement to occupy an inking position, and a printing position with respect to stock in said guideway; inking means for said printing mechanism; spring power means; means for loading said power means; means operatively connecting the loading means to the printing mechanism to move the latter to inking position for inking of its type by said inking means during loading of said power means; means for releasably retaining said power means loaded; stapling mechanism; means operatively connecting said stapling mechanism to said power means for actuation by the latter to effect a stapling operation upon stock in said guideway when said power means is released from said retaining means; means operatively connecting the stapling and printing mechanisms for effecting printing on said stock by said printing mechanism; and cutting means operated by said power means in synchronism with the aforestated stapling and printing operations for separating from the stock, that portion thereof subjected to the printing and stapling operations.



2,449,189

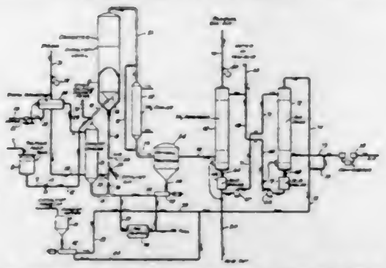
HORSE TIE

David S. Young, Toronto, Ontario, Canada, assignor of one-half to Wesley Thompson, London, Ontario, Canada

Application October 28, 1946, Serial No. 706,273

19 Claims. (Cl. 280—192)

1. A checking device for a horsedrawn vehicle comprising in combination a support, a sheave rotatably mounted on said support, a cable attached to said sheave for connection to the bridle



of the horse, a first clutch for forwardly turning said sheave including a driving element journalled on said support, means providing radial teeth on said sheave, and a spring-projected key slidably mounted on said driving element for engaging said radial teeth; a second clutch, said second clutch being operable by manual control for establishing a driving connection between said driving element of the first clutch and a wheel of the vehicle; and a trip mechanism for said key comprising a pivoted cam radially disposed on said driving element and provided with a notch, a finger engaged in said notch and carried by said key, a circular series of fixed teeth mounted on said support concentric with said driving element, a wiper bar rigidly carried by said cam having an end for riding on said circular series of teeth, and spring means urging said wiper bar to drop into an interdental space of said circular series of fixed teeth.

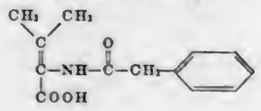
2,449,190

PROCESS FOR THE PRODUCTION OF SULFUR TRIOXIDE

Arnold Belchetz, Larchmont, N. Y., assignor to Stauffer Chemical Company, a corporation of California

Application August 3, 1945, Serial No. 608,742
4 Claims. (Cl. 23—174)

1. A process for producing SO_3 comprising injecting a material from the group consisting of sulphur, waste sulphuric acid and mixtures thereof into a reaction zone, introducing solid particles of a vanadium oxidation catalyst and air into said zone to maintain a catalyst bed in fluidized suspension therein, the quantity and temperature of catalyst introduced being sufficient to maintain said zone at a temperature in the range of 600°–1100° F. and conducive to oxidation of SO_2 to SO_3, removing a stream of catalyst from said zone, cooling the removed catalyst stream, and returning at least a portion of the cooled catalyst stream with additional air.



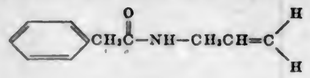
2,449,191

PHENACETYLAMINOMETHYLCROTONIC ACID

Otto K. Behrens, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 24, 1945, Serial No. 612,523
1 Claim. (Cl. 260—518)

N-phenylacetyl - α - amino-β,β-dimethylacrylic acid represented by the formula



2,449,192

N-ALKENYL PHENYLACETAMIDES

Otto K. Behrens and Quentin F. Soper, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 24, 1945, Serial No. 612,527
4 Claims. (Cl. 260—558)

1. N-allyl-phenylacetamide represented by the formula

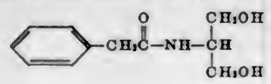
2,449,193

PROCESS AND CULTURE MEDIUM FOR PRODUCING PENICILLIN

Otto K. Behrens, Reuben G. Jones, and Quentin F. Soper, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 24, 1945, Serial No. 612,530
7 Claims. (Cl. 195—36)

1. The method of producing penicillin in submerged culture which comprises growing a Penicillium mold of the notatum-chrysogenum group in a culture medium in the presence of an effective amount less than about one percent of N-(2,2-diethoxyethyl) -phenylacetamide represented by the formula



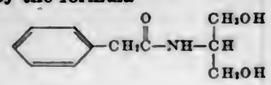
2,449,194

N-DIHYDROXYPROPYL PHENYLACETAMIDE

Otto K. Behrens and Joseph W. Corse, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 24, 1945, Serial No. 612,531
1 Claim. (Cl. 260—558)

N-(1,3-dihydroxy - 2-propyl) -phenylacetamide represented by the following formula



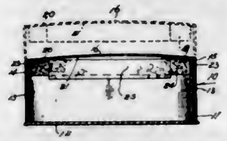
2,449,195

PROCESS AND CULTURE MEDIA FOR PRODUCING PENICILLIN

Otto K. Behrens and Joseph W. Corse, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 24, 1945, Serial No. 612,535
7 Claims. (Cl. 195—36)

1. The method of producing penicillin in submerged culture which comprises growing a Penicillium molds of the notatum-chrysogenum group in a culture medium in the presence of an effective amount less than about one percent of N-(1,3-dihydroxy-2-propyl) -phenylacetamide represented by the formula

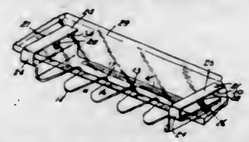


2,449,196

POWDER BOX HAVING SEALING RING

George Russell Bent, Northbrook, Ill., assignor, by mesne assignments, to Consolidated Cosmetics, Chicago, Ill., a partnership composed of James L. Younghusband and Howard Younghusband

Application September 7, 1946, Serial No. 695,437
1 Claim. (Cl. 229—5.5)



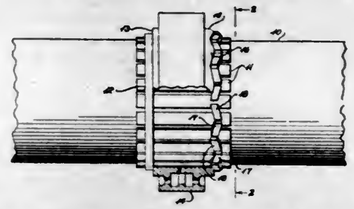
A cardboard powder box comprising a container having a closed bottom and straight side walls extending upwardly from the bottom to an open top, a cover having a closed top without indentations, and straight side walls extending downwardly from the top to an open bottom, and a sponge rubber ring having a top and straight side walls, the side walls of said ring being parallel to the side walls of said cover, and the side walls of said container, the top of said ring attached to the inner surface of the top of said cover, the side walls of said ring unattached to and spaced slightly from contact with the side walls of said cover, said cover slightly larger than said container and adapted for removable engagement therewith, so that the straight side walls of said container extend directly upwardly between the straight side walls of said ring and the upper portions of the straight side walls of said cover, thereby contacting and compressing said ring to form a seal to prevent loss of powder from said container.

2,449,197

TUBE HOLDER

Alfred B. Benziger, Chicago, Ill.

Application August 22, 1946, Serial No. 692,277
1 Claim. (Cl. 211—74)



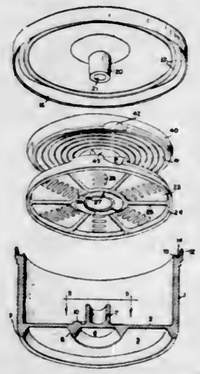
A tube holder comprising a thin hard plate, a pair of integral opposite raised end portions, a pair of U-shaped clamping members having upper and lower legs, with their upper legs contacting said end portions, said upper legs adapted to contact the upper surface of a shelf so as to position said plate below said shelf, and a pair of tightening members extending through said end portions and said U-shaped members and contacting the under surface of the shelf for removably attaching the tube holder to the shelf, said thin hard plate having a plurality of spaced cut out portions beginning at the front of the plate, each of said cut out portions defined by diagonally inwardly extending opposite side walls, with the widest part of each cut out portion in front, graduated to the narrowest part in back, each of said cut out portions adapted to permit the entry and withdrawal of a tube formed of softer material than said plate and having a cap, said opposite side walls of each cut out portion adapted to contact said tube below its cap and to bite into the soft material of the tube for removably holding the same in rigid position.

2,449,198

RIDING RING MOUNTING FOR ROTARY CYLINDERS

Richard Bernhard, Allentown, Pa., assignor to Traylor Engineering & Manufacturing Company, Allentown, Pa., a corporation of Delaware

Application August 28, 1946, Serial No. 693,599
12 Claims. (Cl. 308—204)

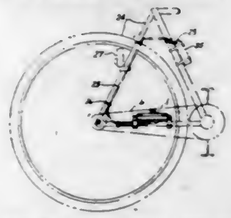


1. In combination, a rotary cylinder and a riding ring surrounding said cylinder, abutment means for one side of the ring fixed to the cylinder, the other side of the ring being provided with a circumferentially extending series of substantially triangular teeth, and abutment means for said other side of the ring fixed to said cylinder and presenting a series of wedge formations engageable with one side of the ring teeth upon relative turning of the cylinder and ring in one direction whereby to wedge the ring against the first abutment means and to positively limit such relative turning.

2,449,199

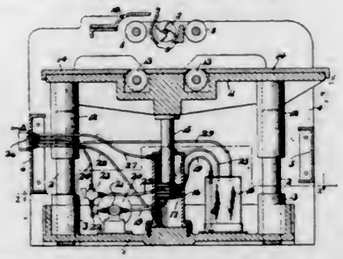
FILM TANK

Walter W. Boes, Dayton, Ohio, assignor to The W. W. Boes Company, Dayton, Ohio, a corporation of Ohio



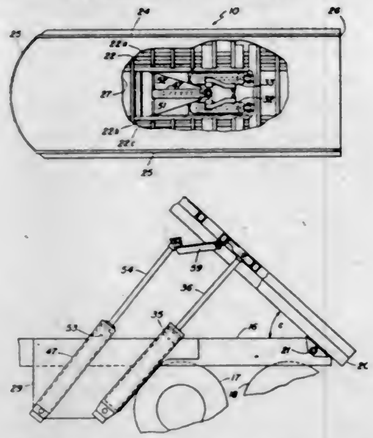
Application July 31, 1946, Serial No. 687,467
2 Claims. (Cl. 95—90.5)

1. In a device for developing films, a receptacle, a reel rotatable therein, said reel comprising a pair of oppositely disposed plates provided with grooves which extend toward one another and have a spiral configuration, means for locating the plates with respect to one another both in the longitudinal and peripheral directions, and means for periodically causing the reel to move reciprocably in the longitudinal direction as it is being roated while simultaneously restraining the reel from rotating in the opposite direction, said means comprising segmentally-shaped annular cams tapering in thickness to an abrupt shoulder, one set of cams being positioned on the lower surface of said reel and the other set of cams being



positioned on the bottom of said receptacle whereby when said shoulders come into contact on reverse rotation of the reel the movement of the reel in the reverse direction is stopped.

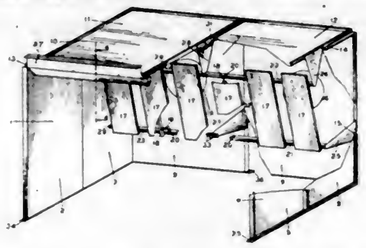
2,449,200
BICYCLE REAR LIGHT CONTROL
Roger Boucher, Hull, Quebec, Canada
Application November 28, 1947, Serial No. 788,729
In Canada November 17, 1947
3 Claims. (Cl. 315—77)



1. In a bicycle rear light control, a housing secured to the frame of a bicycle circuit contact plates on the bottom of said housing, a carriage made of nonconducting material provided with upper and lower rollers and adapted to move back and forth on said plates in the housing, a bicycle driving chain, a longitudinal recess in said carriage and a dog adapted to partly rotate in a vertical plane therein, teeth formed on the outer extremity of said dog for engagement with said driving chain.

2,449,201
PLANER CONSTRUCTION
Hadley N. Buss, Detroit, Mich.
Application February 11, 1946, Serial No. 646,904
4 Claims. (Cl. 144—129)

1. In a construction as described, a horizontal base of substantially rectangular form, vertical guide posts connected to and extending upwardly, one at each corner of the base, vertical supporting ends spaced from each other and connected with said base, a horizontal rotary planer cutter mounted on and between said supporting ends at their upper portions, a horizontal table between said supporting ends located below the planer cutter, downwardly extending vertical guide sleeves on the table, one for each post, telescopically receiving the upper end portions of said posts, hydraulic piston-cylinder means having a fixed connection and mounting relative to the base, means for pumping liquid under pressure, means for conducting said liquid selectively to either end of the cylinder of said means and for carrying liquid away from the cylinder at the opposite end, manually operable means for controlling the selected end of the cylinder to which the liquid is carried, and operative means for raising and lowering said horizontal table and the guide sleeves carried thereby in conformity with the end of the piston to which said liquid is pumped under pressure.

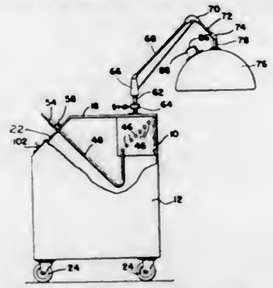


2,449,202
HYDRAULIC ACTUATING MECHANISM FOR DUMP TRUCKS
Herbert O. Day, Bowling Green, Ohio
Application November 8, 1946, Serial No. 708,632
3 Claims. (Cl. 298—22)

1. Load-dumping mechanism for a vehicle having a chassis frame, and a truck body tiltable upon said chassis about a horizontal axis extending transversely of the chassis frame, said mechanism comprising a main hydraulic power cylinder the rear end of which is mounted upon said chassis frame to swing about a horizontal axis representing the pivotal point of the cylinder and which has a piston rod engaging the truck body, an auxiliary cylinder spaced from said main cylinder and having its rear end pivotally mounted upon said chassis frame at a point spaced farther from said horizontal body-tilting axis than the pivotal point of said main power cylinder so as to swing about a horizontal axis parallel to said other two horizontal axes and having an auxiliary piston rod engaging said truck body, and automatic means for operatively disengaging the auxiliary piston rod from the body when the body continues tilting past the maximum extension of the auxiliary piston rod, and for operatively reconnecting said piston end with the body at a pre-determined point of the return movement thereof.

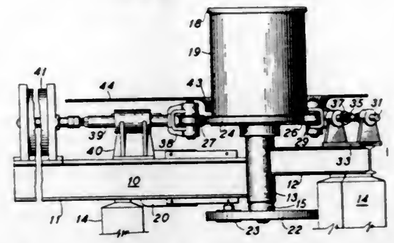
2,449,203
SPRAY BOOTH
Albert R. Clark and Reynold J. Kittle, Toledo, Ohio, assignors to The De Vilbiss Company, Toledo, Ohio, a corporation of Ohio
Application January 1, 1944, Serial No. 516,684
1 Claim. (Cl. 91—60)

In a spray booth having an open front end, a rear end for the exhaust outlet and a roof with a number of sections fastened to each other along adjoining sides extending from the rear and toward the front of the booth, a supporting beam of T-shaped cross section; extending across the full width of the booth with the vertical portion fastened to the forward edges of the roof sections, and a water deflecting curtain held between the vertical portion of the beam and the forward edges of the roof sections and extending



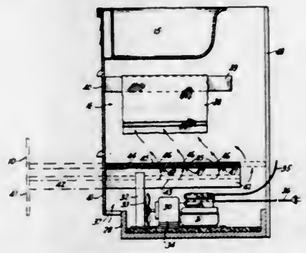
downwardly a short distance into the spray booth.

2,449,204
DISPLAY PAGE FOR COINS AND OTHER OBJECTS
Charles Glenn Curtis, Brea, Calif.
Application April 28, 1945, Serial No. 590,945
3 Claims. (Cl. 206—0.83)



3. A display page comprising a central part having apertures therethrough, an upper part secured to said central part and overlying said apertures but terminating short of three of the side edges of the central part, a lower part adapted to underlie said central part and cover said apertures said lower part having walls extending around three of its edges and flanges arranged to overlie edges of the central part, said parts having registrable perforations, the under part having a finger receiving openings formed on its fourth edge.

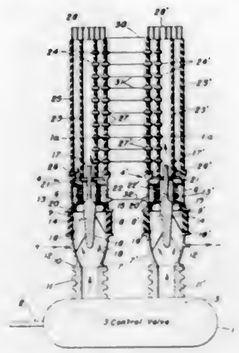
2,449,205
HAIR DRIER
Oreste D'Emilio, Nutley, N. J.
Application August 1, 1946, Serial No. 687,664
1 Claim. (Cl. 34—90)



An appliance of the character described comprising a cabinet, motor means in said cabinet, pump means actuated by said motor means, a compressed air storage means connected to said pump means, air distribution means connected to said storage means, a plurality of conduit means connected to said distribution means for directing air onto a person's head, heating means in said distribution means, a second conduit means connected to said distribution means for conducting air outwardly of said distribution means, a hood on said conduit means for directing air onto a person's head, air circulating means carried by said hood for forcing the air outwardly of said hood, and nozzles on the ends of said first conduit means for directing a secondary stream of air onto the person's head when covered by said hood.

2,449,206
APPARATUS FOR ROLLING STEEL BARREL CHIMES
Eldon O. Dryer, Richmond, and Allen H. Meisenheimer, Jr., Berkeley, Calif.
Application January 27, 1947, Serial No. 724,574
2 Claims. (Cl. 153—32)

1. In combination, a turntable having a rim, means for rotating said turntable, a rigid floating ring surrounding said turntable, and means for selectively positioning said ring to permit an annular flange to be received between said ring and said turntable and for urging said ring toward said rim progressively to compress said flange radially therebetween when said turntable is rotated, said means comprising a plurality of circumferentially spaced rollers and means for resiliently urging some of said rollers toward and from said rim, at least one of said rollers being positively movable toward said rim.

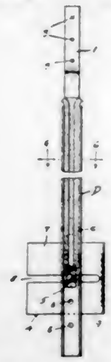


2,449,207
SOUND DEADENER DRAWER
Guyon L. C. Earle, Forest Hills, N. Y., assignor to Hugh S. Wertz, trustee for the beneficiaries of the Earle Patents Trust
Application May 7, 1945, Serial No. 592,395
5 Claims. (Cl. 34—90)

1. In a kitchen unit, a refrigerator containing an operating unit a portion of which emits heat and is located at a stationary position outside the refrigerator, a cabinet member enclosing said heat-emitting portion of the operating unit, said cabinet member having an opening in the front thereof and an air inlet adjacent the bottom thereof located to permit air to circulate over said heat-emitting portion of the operating unit, a slidable closure member for said opening comprising a vertical front member and a horizontal member connected to said front member and positioned to slide to a position over and closely

adjacent said heat-emitting portion of the operating unit to control said air circulation, and means for exhausting air from said cabinet.

2,449,208
CIRCUIT BREAKER
Ernst Eichenberger, Wettingen, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland, a joint-stock company
Application January 16, 1946, Serial No. 641,571
In Switzerland January 26, 1945
8 Claims. (Cl. 200—148)



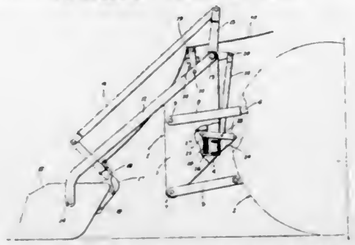
1. In a pressure gas circuit breaker for interrupting a direct current load, a pair of contact elements, one of said elements being hollow, means supporting said contact elements for movement of at least one contact relative to the other to open a circuit therebetween under the action of pressure gas, an inner tubular casing of insulating material constituting an arc blowing chamber, the bottom of said casing being open and disposed adjacent said hollow contact, an arc-receiving electrode connected to at least one of said contact elements, said electrode being extended into the lower portion of said casing, a plurality of conductive pins spaced one above the other and extending through the wall of said casing, an outer tubular casing of insulating material surrounding said inner casing and through which pressure gas flows, and at least one arc attracting electrode located in the space between said inner and outer casings and carrying the potential of the other of said contact elements.

2,449,209
METHOD FOR IMPROVING CHEMICAL REACTIVITY AND ADSORPTIVE CAPACITY OF LIGNIN FROM WOOD SACCHARIFICATION
Eduard Farber and Mathew Sciascia, Washington, D. C., assignors to Timber Engineering Company, Washington, D. C., a corporation of Delaware
No Drawing. Application June 12, 1947, Serial No. 754,274
3 Claims. (Cl. 260—124)

1. The method for improving the chemical reactivity and adsorptive capacity of lignin from wood saccharification comprising digesting such lignin with a solution of an alkali hydroxide having a concentration within the limits of from about 1% to about 12% alkali hydroxide at a temperature between 20° C. and 100° C., and thereafter separating the treated lignin from the alkali hydroxide.

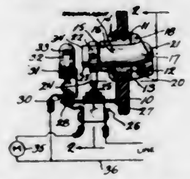
2,449,210
AUTOMOBILE DOOR GLASS CHANNEL RETAINER
Charles C. Faust, Lake Charles, La.
Application July 10, 1947, Serial No. 759,945
1 Claim. (Cl. 296—44.5)

A device of the character specified, comprising a door glass channel retainer of U-shape form in cross section, said retainer formed at its upper end with a flat elongated integral arm or strip formed with a series of transverse apertures and in its lower end with a series of transverse longitudinally spaced openings, a glass channel mounted in the channel retainer, a right-angularly bent bracket and a transverse bolt for adjustably securing said bracket to the lower end of said channel retainer, said bracket formed in one arm with a central horizontal slot to receive the body portion of said transverse bolt and formed in its other arm with upper and lower aligned series of transverse apertures, and fastening screws for attaching said last mentioned arm of the bracket to the door.



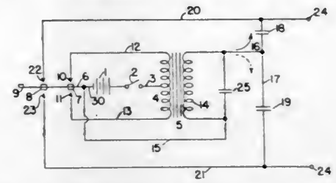
2,449,211
BOOKMARK
Joseph H. Forsyth, Santa Ynez, Calif.
Application March 5, 1947, Serial No. 732,512
1 Claim. (Cl. 116—119)

A book marker including a clamp, substantially U-shaped in cross section, formed from a flat piece of sheet material bent longitudinally upon itself to provide outer and inner clamp sections adapted to engage between them a book cover, the bend connecting said sections straddling the upper edge of the cover, a relatively elongated tubular shoulder, non-circular in cross section, on the clamp, an end edge of one of the clamp sections being rolled to provide said shoulder, said shoulder being disposed wholly beyond and adapted to fit against the side edge of the cover, whereby to constitute a guide means and stop for accurate positioning, in cooperation with the bend of the clamp, of the marker upon the cover, and a marker arm of spring wire having one end extended into the shoulder, said end being bent so as to be gripped within the shoulder



and held against movement therein, the arm including a long wholly straight medial portion extended from the shoulder at a right angle thereto and outside of and in parallel relation to the bend of the clamp, and said medial portion terminating in a free end inwardly extended to lie against leaves of the book and to move therebetween when said leaves are turned.

2,449,212
TRACTOR SCOOP
Frank M. Fraga, Fresno, Calif.
Application May 17, 1946, Serial No. 670,581
13 Claims. (Cl. 214—140)



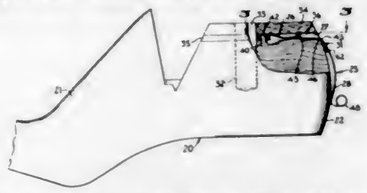
1. A scoop-type implement comprising an upstanding frame, a scoop disposed outwardly of the frame, a vertically swingable linkage assembly pivotally connected between the frame and the scoop, said linkage assembly supporting the scoop for movement between a lowered digging and loading position to an elevated dumping position, said scoop being pivoted to said linkage assembly for downward tilting to dump, a releasable latch normally preventing dumping of the scoop, and power mechanism between the frame and linkage assembly operative to swing the latter upwardly and to control lowering thereof; the scoop having a cutting edge, there being means including said linkage assembly in part operative, upon initial actuation of the power mechanism, to tilt the scoop in a direction to relatively elevate said cutting edge to a given extent and prior to elevation of the scoop by said mechanism from said digging position to dumping position.

2,449,213
TELLTALE CONTROL SWITCH
Raymond Richard Fredrick, Chicago, Ill., assignor to The Bastian-Blessing Company, Chicago, Ill., a corporation of Illinois
Application May 25, 1944, Serial No. 537,269
7 Claims. (Cl. 200—167)

1. In a telltale switch the combination of a transparent shaft, means for mounting the shaft upon a panel board, an apertured knob secured over the exposed end of the shaft, a collar received upon the other end of the shaft to hold the shaft against axial displacement, switch means controlled by rotation of the shaft, and a source of light disposed at the inner end of the shaft on the axis of rotation of said shaft said source of light being controlled by said switch.

2,449,214
VOLTAGE MULTIPLYING VIBRATOR APPARATUS
John R. Gelzer, Jackson, Mich., assignor to Eltron, Inc., Jackson, Mich., a corporation of Michigan
Application May 1, 1948, Serial No. 24,661
5 Claims. (Cl. 171—97)

3. Electrical vibrator apparatus comprising in combination a transformer, a battery, a vibrator reed connected for actuation by said battery, the latter being in turn connected to the transformer primary winding and the said vibrator reed carrying electrical contacts, fixed contacts corresponding to said vibrator contacts and including contacts connected to the transformer primary, and other contacts connected to the output terminals, and a pair of storage condensers series connected between said output terminals, the transformer secondary being in turn connected to an intermediate point between said condensers and being also connected to the vibrator reed, whereby the output voltage taken from the condensers in series due to the alternate contact making positions of said vibrator reed is a multiple of the voltage value across each condenser.



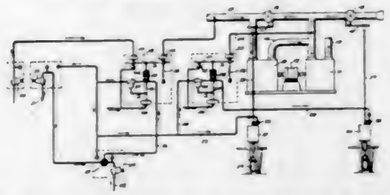
2,449,215
METHOD OF PRODUCING COTTON CORDAGE
Charles F. Goldthwait and Herbert O. Smith, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application July 10, 1945, Serial No. 604,288
3 Claims. (Cl. 57—164)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A method of producing cotton reinforcing cord for pneumatic tires, power belts, and so forth, comprising forming ordinary cotton into a yarn of minimum practical spinning twist, treating the yarn with an alkali hydroxide in a concentration of about 20 percent to 25 percent by weight while allowing the yarn thus treated to shrink about 15 percent of its original length to allow maximum swelling of the cotton, washing out residual alkali with a non-acid aqueous medium, drying the yarn, and twisting the dried yarn into cord, thus regaining most of the original length by tension applied during the twisting.

2,449,216
SHOE ASSEMBLING AND LOCATING ATTACHMENT
Hiram Gordon and Charles H. Free, Pasadena, Calif., assignors to Joyce, Inc., Pasadena, Calif., a corporation
Application July 2, 1946, Serial No. 681,048
13 Claims. (Cl. 12—141)

1. A last for shoe construction, spring-urged means on the back of the last for releasably engaging and holding the back of a shoe upon said last, stop means associated with the spring-

urged means limiting the extent to which the back of the shoe may be inserted under said spring-urged means, and a finger piece upon said



spring-urged means by which said last named means may be raised to slip the back of the shoe thereunder.

2,449,217

REGULATING APPARATUS

Erwin W. Graham, Lakewood, Ohio, assignor to Republic Flow Meters Company, Chicago, Ill., a corporation of Illinois

Application June 14, 1944, Serial No. 540,273
8 Claims. (Cl. 230—2)

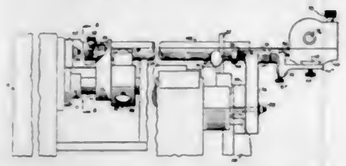
1. Regulating apparatus comprising a regulator adapted to operate control means to vary a condition to be controlled in response to a loading pressure, a conduit to conduct loading pressure to the regulator, a manually adjustable controller in the conduit adjustable to limit the maximum value of the loading pressure, and an automatic controller in the conduit in series with the manual controller to vary the loading pressure automatically in response to variations in the condition whereby the automatic and manual controllers serve as limiting devices for each other.

2,449,218

BALL POINT PEN

Francis E. Gruber, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn.

Application December 27, 1945, Serial No. 637,327
5 Claims. (Cl. 120—42.03)



1. A capless fountain pen having a tubular casing, a slidable ink reservoir unit positioned within the casing, spring means for moving said reservoir in a backward direction to conceal the writing point within the casing, a shoulder for controlling the backward movement of the ink unit, a pocket clip attached to said casing, a spring tail end formed on said pocket clip, and a spring catch carried by said ink unit which is adapted to be released by said spring tail of said pocket clip when the same is depressed, whereupon said spring means automatically moves said ink unit and writing tip longitudinally in said casing to conceal the writing tip when the same is not desired for use.

2,449,219

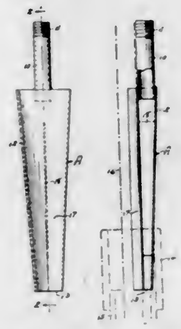
LEVELING AND ALIGNING MEANS

Albert M. Guillet, Charlotte, N. C.

Application February 25, 1946, Serial No. 649,991
4 Claims. (Cl. 33—84)

3. Apparatus for alining and leveling winding frames comprising a bracket having means for attaching it to one end of the frame and having means on its upper end for supporting a reel housing from which a line is adapted to extend, a second bracket attachable to the other end of the frame, said frame having a pair of spaced parallel revolving shafts thereon having spaced rollers thereon for contacting cheeses or imparting rotation thereto during a winding operation, said second bracket having a downwardly projecting portion and a clamping member associated therewith whereby the second bracket can be clamped around one of said shafts, said second bracket having a notch cut in its upper end and extending downwardly thereinto, said second bracket having parallel spaced grooves in its outer edge, a fitting adapted to fit into said notch and having transversely extending portions adapted to fit into said grooves, said fitting having a turnable vertically disposed threaded screw therein, an anchor member threadably mounted on said screw whereby by rotating said screw the anchor member will be adjusted vertically of the notch in which it is disposed, said anchor member having means for securing the other end of said line extending from the reel housing thereto, each of said shafts having fixed thereon a collar, each collar being of the same dimensions as rollers on which cheeses are adapted to rest, a transverse member adapted to rest on said collars, or said rollers as desired, said transverse member having a downwardly projecting portion adapted to fit against one side of one of the collars or the rollers to position the transverse member relative to the two shafts, said transverse member having a transverse notch therein adapted to become alined with the line extending from the anchor member to the reel housing when the shafts, collars and rollers are in perfectly alined position.

2,449,220



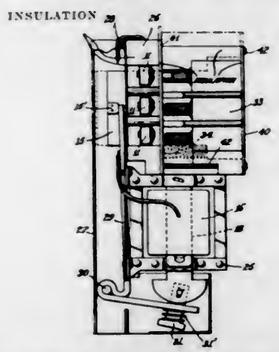
COOLING NOZZLE FOR USE IN WELDING

Ronda C. Gupton, Newport News, Va.

Application August 30, 1944, Serial No. 551,955
1 Claim. (Cl. 113—98)

As an article of manufacture, a cooling fluid injector nozzle comprising an elongated casing open at the ends providing a nozzle head crescent shape in cross section having arcuate inner and outer walls connected at the edges and having a centrally disposed longitudinally positioned partition connecting the inner and outer walls midway between the edges thereof, the ends of the partition being spaced from the ends of the casing providing a mixing chamber at the inlet end and a diffusing chamber at the outlet end, the cross sectional area of said casing being gradually reduced toward the discharge end increasing the velocity of fluid passing therethrough, and a centrally disposed nipple providing a connector for

fluid supplying means extending from the inlet end of the casing with open areas in the inlet end



on each side of the nipple through which air is drawn into the casing by fluid from the nipple passing therethrough.

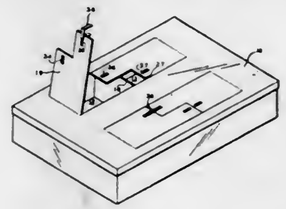
2,449,221

ELECTROMAGNETICALLY CONTROLLED SWITCH

Herman J. Hammerly, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut

Application October 24, 1942, Serial No. 463,215
14 Claims. (Cl. 200—104)

2. An electromagnetic controller comprising a base, an electromagnetic actuator carried by the base including a coil, a main switch, a body carrying said main switch detachably carried by the base, a holding-in switch device in circuit with the coil of the magnetic actuator partly carried by the base and partly by the detachable body, said body being slidable on the base from a position in which the main switch circuit is closed and to another position in which the main switch is open.



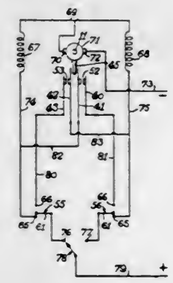
2,449,222

BABY CHICK SHIPPING BOX

Russell R. Harness, Elwood, Ind.

Application March 22, 1946, Serial No. 656,378
3 Claims. (Cl. 229—15)

1. In a box like container having a plurality of compartments formed by partition walls and collectively accessible by the removal of a cover for said box, means providing for the individual accessibility of each of said compartments comprising a plurality of flaps cut in the cover of said box and hinged for opposed movement in pairs to close openings therein communicating



with said compartments, each of said flaps having an extension thereon supported by one of the partition walls of said box, and clamping means insertable in said flaps to secure them in their closed positions.

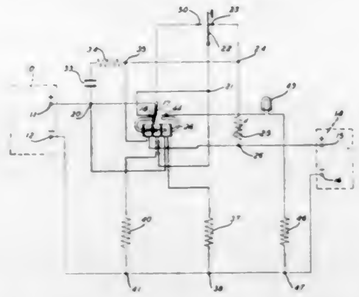
2,449,223

BRAKING DEVICE FOR ELECTRIC MOTORS

Bernard Max Hayman, Leamington Spa, England, assignor to Automotive Products Company Limited, Leamington Spa, England

Application November 27, 1945, Serial No. 631,157
In Great Britain November 27, 1944
6 Claims. (Cl. 318—275)

1. An electric motor system arranged to drive an actuated member translationally along a path to one end position or the other, according to the position in which a selector switch is set, said system comprising a reversible electric motor having dual windings, one for each direction of rotation, a screw-and-nut drive connecting the motor shaft with the actuated member to produce translational movement, a motion-responsive switch device comprising an arm, a frictional slipping drive from the motor to the arm and a pair of motion-responsive switches which are normally open, one or other of the motion-responsive switches being closed when the motor is rotating, depending upon the direction, a pair of limit switches of the change-over type either one of which is operated mechanically by the actuated member as said actuated member reaches the corresponding end position, each limit switch normally connecting the current supply from the selector switch directly with that motor winding which moves the actuated member towards said limit switch, but when the end position is reached, connecting the supply from the selector switch with the other motor winding by way of one of the motion-responsive switches, so that the motor is brought



rapidly to a standstill by reverse torque and the initial reverse rotation cuts off the motor from the supply.

2,449,224

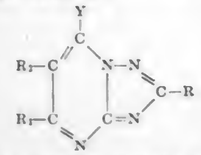
ELECTRICAL CIRCUIT CONTROL

Andrew S. Hegeman, Jr., Glen Ridge, and Harry N. Snook, Maywood, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application July 15, 1944, Serial No. 545,156
1 Claim. (Cl. 175—294)

An electrical circuit control, interposed between an electrical current supply and an electrically energizable unit comprising a polarized relay having a primary winding, a tertiary winding and an opposing secondary winding, the latter normally creating a magnetic force exceeding the combined normal magnetic force of the primary and tertiary windings, an armature for the relay actuable into open and closed positions to open and to close circuits from the supply and extending respectively through the unit, the primary winding and the secondary winding, the tertiary winding being included in a circuit extending directly from the supply, and a switch to initially complete a circuit from the supply through the secondary winding to cause movement of the armature into its closed position, the primary winding being affected by an overload current to the unit to neutralize the magnetic effect of secondary winding and with the magnetic force of the tertiary windings to cause movement of the armature into its open position and cause deenergization of the primary and secondary windings and the unit, the magnetic force of the tertiary winding holding the armature in its open position.

2,449,225



7-AMINO AND 7-HYDROXY-1,3,4-TRIAZAINDOLIZINES AS STABILIZERS FOR PHOTOGRAPHIC SILVER-HALIDE EMULSIONS

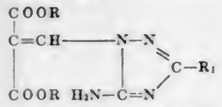
Newton Heimbach and Walter Kelly, Jr., Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application October 22, 1946, Serial No. 704,933
12 Claims. (Cl. 95—7)

1. A photographic material comprising a base and a light-sensitive silver-halide emulsion carried thereby, said photographic material containing, in fog inhibiting amount, a compound of the general formula:

wherein R is a member selected from the class consisting of carboxy and carbalkoxy groups, R_1 is a member selected from the class consisting of an alkyl, aryl, and heterocyclic groups, R_2 is a member selected from the class consisting of hydrogen, alkyl, and aryl groups, and Y represents the member selected from the class consisting of amino and hydroxy groups.

2,449,226

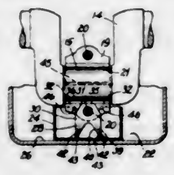


2-[VINYL-DICARBOXYLIC ACID ESTER]-3-AMINO-1,2,4-TRIAZOLES AS STABILIZERS FOR PHOTOGRAPHIC SILVER-HALIDE EMULSIONS

Newton Heimbach and Walter Kelly, Jr., Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application October 22, 1946, Serial No. 704,934
11 Claims. (Cl. 95—7)

1. A photographic material comprising a base and a light sensitive silver-halide emulsion carried thereby, said photographic material containing, in fog inhibiting amount, a compound of the general formula:



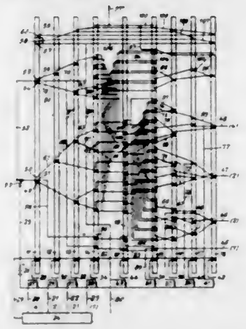
wherein R is an alkyl group and R_1 is a member selected from the class consisting of hydrogen and alkyl groups.

2,449,227

CRANKCASE OIL THROWER AND CRANK-PIN LUBRICATING DEVICE

Franklin G. Hobart, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois

Application January 25, 1945, Serial No. 574,504
10 Claims. (Cl. 184—13)



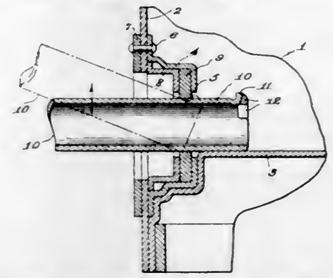
1. In an engine providing a crankcase having a body of lubricant therein, a crankshaft having a crank pin, and a piston connecting rod having a journal connection with the crank pin, provided by a bearing-half at the crank end of the rod, and a bearing cap secured to the rod bearing-half, the combination with said crank pin connection, of means for effecting lubrication thereof from the crankcase body of lubricant, comprising a member providing a body portion located between the rod bearing-half and cap, means carried by said body portion and including relatively spaced plate-like elements, defining with said body portion a channel extending to the surface of the crank pin, and a dipper portion projecting from said body portion in a position to dip into said crankcase body of lubricant upon crankshaft rotation, said dipper portion being adapted to direct and guide lubricant from said lubricant body, into and through said channel to the crank pin surface.

2,449,228

COUPLING MEANS FOR USE WITH CALCULATING, BOOKKEEPING, OR LIKE MACHINES

Rolf Hofgaard, Nordstrandshogda, near Oslo, Norway

Application December 5, 1946, Serial No. 714,295
In Norway May 1, 1946
3 Claims. (Cl. 235—61)



1. A coupling arrangement for electrical computing apparatus comprising a set of electromagnetically controlled input relays, the number of input relays being equal to the number of units in a code system, means for selectively energizing said relays in accordance with numeral values to be entered in the apparatus, sets of contacts controlled by the respective input relays, the sets of contacts of the last input relay including contacts significant respectively of each code value, a source of current, connections between said sets of contacts to connect said current source to those contacts of the last relay corresponding to code values of the energized input relays, a plurality of output electrical circuits, a set of electromagnetically controlled storing relays equal in number to the plurality of electrical output circuits, sets of contacts controlled by the respective storing relays, the first storing relay having contacts corresponding to and connected respectively to the contacts of the last input relay, and connections between the sets of contacts of the storing relays and to said output circuits to complete circuits from said current source to those output circuits corresponding to the numerical value represented by the selectively energized input relays, said last mentioned circuit connections also completing circuits to energize those of the storing relays corresponding to the accumulated numerical value entered at said input relays.

2,449,229

MILK DELIVERY TUBE

John A. Hopwood, Westfield, N. J., assignor to Monitor Process Corporation, Jersey City, N. J., a corporation of New Jersey

Application July 7, 1945, Serial No. 603,677
2 Claims. (Cl. 138—47)

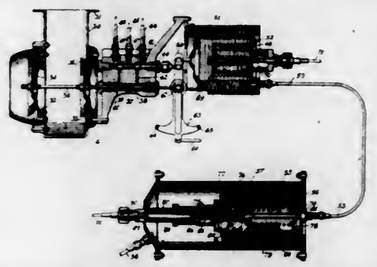
1. A milk delivery tube the inner end of which is flared to provide a radially projecting arcuate flange extending about substantially ¼ to ⅓ the circumference of the tube.

2,449,230

LIQUID PRINTING INK CONTAINING A LIGNIN COMPOUND

Clarence E. Irion, Essex Fells, N. J., assignor, by mesne assignments, to Margot Corporation, New York, N. Y., a corporation of New York

No Drawing. Application July 25, 1945, Serial No. 607,081
18 Claims. (Cl. 106—30)

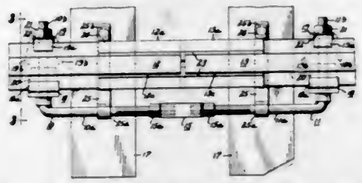


1. A liquid printing ink consisting essentially of coloring matter and a binder dispersed in a hydrophilic liquid carrier containing water, the predominant constituent of said binder being a lignin from fiber liberation.

2,449,231

AIRCRAFT CABIN PRESSURE CONTROL

Joseph Jerger, Ferguson, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware

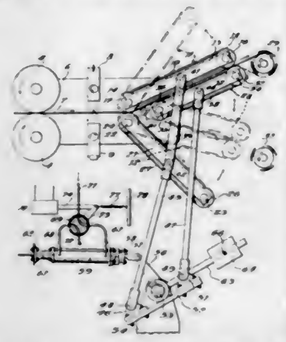


Application September 2, 1939, Serial No. 293,223
17 Claims. (Cl. 98—1.5)

1. In aircraft comprising a pressure cabin and a means delivering air thereto at greater than atmospheric pressure, a cabin pressure control system comprising a valve in the cabin wall for bleeding air therefrom, means for operating said air valve including a piston-cylinder unit, means to feed pressure fluid thereto, a fluid valve for controlling fluid admission and egress to and from the unit, and a control for the fluid valve including a pair of pneumatic bellows each fixed at one end and connected to one-another to jointly contain a fixed weight of elastic fluid, one

said bellows being subject externally to cabin pressure and the other to ambient air pressure, said fluid valve being connected to the non-fixed end of the first bellows.

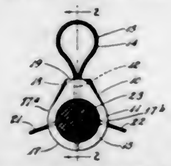
2,449,232
RAIL TOOL
E. D. Jones, Grand Junction, Tenn.
Application July 15, 1946, Serial No. 683,631
4 Claims. (Cl. 254—43)



1. In a tool of the class described for use on abutting rail ends, a pair of rods adapted to be placed in end-to-end relation alongside the rail ends, means clamping the remote ends of said rods to the flange portions of their associated rail ends, a turnbuckle connecting adjacent ends of said rods to thereby exert a pushing or pulling force on said rail ends dependent upon the direction of rotation of said turnbuckle, and a transverse bar connected to a medial position on each of said rods, said bars being adapted to be spiked to cross-ties.

2,449,233
PROCESSES FOR THE PREPARATION OF FLUORINE-CONTAINING CYCLIC HYDROCARBONS
Alexander D. Kischitz, Carl I. Gochenour, and Robert E. Brailsford, Niagara Falls, N. Y., assignors to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York
No Drawing. Application January 8, 1946, Serial No. 639,914
8 Claims. (Cl. 260—648)

1. The process for production of fluorochlorocyclopentenes having eight halogen atoms, including a chlorine atom attached to each olefinic carbon, which comprises agitating hexachlorocyclopentadiene with a fluorinating agent of the group consisting of antimony pentafluoride and antimony pentafluorochloride, having available fluorine, in proportions providing at least substantially six atoms of available fluorine per molecule of diolefin, at not less than 40° C., with refluxing, until the reaction has gone as far as practicable with respect to the reagents present, under the stated conditions, and recovering the product from the reaction mixture.

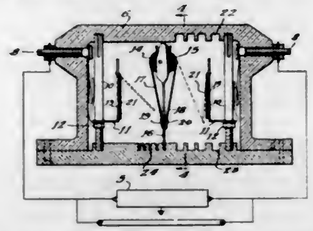


2,449,234
WINDER APPARATUS
Jack R. Knoble, Chicago, Ill., assignor to Roofing Machinery Mfg. Company, Chicago, Ill., a corporation of Illinois
Application May 20, 1947, Serial No. 749,284
12 Claims. (Cl. 242—56)

1. In an apparatus embodying a pair of power driven mandrels disposed to wind sheet material into rolls, a frame, upper, lower and intermediate endless belt conveyors having their forward sheet receiving ends pivotally mounted on said frame, means to raise and lower the free ends of said upper and lower conveyors, means to raise and lower the free end of said intermediate conveyor to cause the latter to alternately coact with said upper and lower conveyors to direct sheet mate-

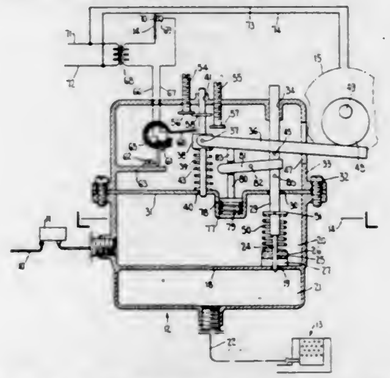
rial toward one and then the other of said mandrels, and means to drive said conveyors.

2,449,235
CORD HOLDER
Carroll P. Krupp, Barberton, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 1, 1945, Serial No. 580,380
3 Claims. (24—130)



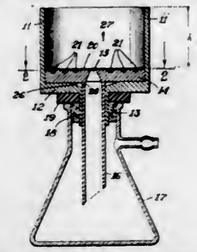
1. A cord clasp comprising a disk-like body having generally flat front and rear faces and rounded sides and a wedge slot having front and rear walls between said faces extending substantially across the width of said body between the sides thereof, said body having a uniform bore therethrough in communication with the bottom of said slot at a central position in said body, said bore being dimensioned for receiving a bight of the cord with cord reaches thereof disposed through said bore in side-by-side close relation therein and into said slot, the bottom of said slot diverging from said bore to said sides of the body and the front and rear walls of said slot diverging from said bottom to the outer surface of said body, said slot being dimensioned for receiving said cord continuously from said bore into said slot and for detachably holding portions of the cord by wedging action in said slot against said front and rear walls and substantially continuously along the bottom thereof, the walls of said slot having spaced-apart ridges transversely of said slot for engaging the material of said cord.

2,449,236
CIRCUIT PROTECTOR
Lewis H. Lamont, Chicago, Ill.
Application July 17, 1946, Serial No. 684,210
6 Claims. (Cl. 200—88)



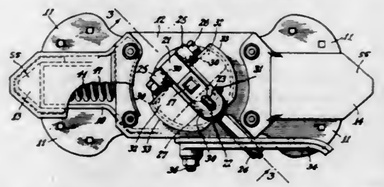
1. A safety device for protecting a current source against open circuit ground or overload, said device comprising, in combination, spaced conducting members adapted to be connected to the opposite terminals of the current source, a grounded conducting member between the first

named members, an electrostatic charge responsive leaf connected with at least one member and being free to move in response to the attraction of opposite electrostatic charges on said members and shorten the gap between them to the point where spark discharge occurs across the gap be-



tween a pair of said members, a retractile gap bridging element connected to at least one of said members and operable in response to the resulting current flow from the discharge between the members to establish and maintain a low resistance path between said members so long as the current flow continues.

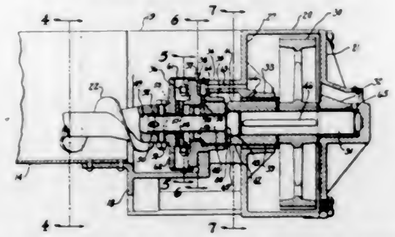
2,449,237
FUEL FEEDING APPARATUS
Walter S. Landon, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application March 23, 1944, Serial No. 527,682
11 Claims. (Cl. 158—36)



2. Fuel feeding means for a liquid fuel burner, comprising a casing having a constant level chamber with an outlet below the liquid level, a valve member constructed to fit said outlet and reciprocal into and from said outlet to clean the same and regulate flow therethrough, means to reciprocate said valve member at a rate to supply fuel for a constant burner flame and including a lever and a continuously rotating eccentric engaging said lever, said valve member having an abutment engageable with said lever, a spring urging said valve member from said outlet and urging said abutment against said lever and said lever against said eccentric, a safety spring operable to overcome said first-named spring and to move said valve member into said outlet, a dashpot effective for the interval during valve member releasing movement of said lever to hold said safety spring against operation, and means operable by said lever to render said dashpot effective.

2,449,238
FILTRATION APPARATUS
Charles Leandro Lightfoot, Jr., Summit, N. J.
Application November 21, 1947, Serial No. 787,371
6 Claims. (Cl. 210—155)

5. In a filtering device, the improvement comprising in combination an open-top receptacle having an opening in its bottom and a closely fitting permeable piston member slidably mounted therein, said piston member having a tubular stem depending therefrom which stem passing tightly through the receptacle bottom opening, between the receptacle bottom and the piston member an intermediate space surrounding the base of said tubular stem and in this tubular stem at least one perforation connecting said intermediate space with the tubular conduit in said stem which stem has a length at least sufficient to move the piston into flush position with the free edge of the receptacle.

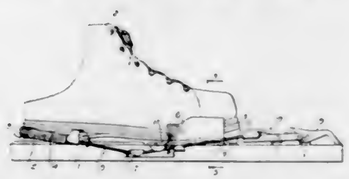


2,449,239
SNUBBED TRAILING SETTING SWITCH STAND
Oscar F. Magnus, Chicago, Ill., assignor to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
Application November 25, 1944, Serial No. 565,072
5 Claims. (Cl. 246—284)

1. In an automatic switchstand of the setover type, a switchstand casing, a spindle journaled in said casing having set positions corresponding to the opposite set positions of a switch, a movable holding member in said casing having set positions corresponding to the opposite set positions of a switch, over-centering mechanism yieldably retaining said holding member in its set positions to permit a train to set over the switchstand from one to its other set position, said over-centering mechanism comprising a movable cylinder member having operative connection with said holding member, said cylinder member having an abutment, a helical spring surrounding said cylinder member and exerting thrust between said abutment and said casing, a piston member within said cylinder member and connected to said casing, said cylinder member and piston member constituting a dashpot, said dashpot comprising means exerting comparatively little resistance to compression of said helical spring while exerting comparatively great resistance to expansion of said spring, means for manually

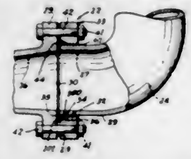
moving said spindle between said set positions substantially independently of the action of said over-centering mechanism and of said dashpot, and for normally holding said spindle in fixed relation to said holding member.

2,449,240
CONVEYING MECHANISM
Eugene Martin, Wesleyville, Pa., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application July 19, 1946, Serial No. 684,862
12 Claims. (Cl. 198—213)



1. In a conveying system, a conveyor screw, a driving shaft and an intermediate shaft between and normally in axial alinement with said conveyor screw and driving shaft, a loose driving connection between the adjacent ends of said conveyor screw and intermediate shaft providing for limited axial misalinement therebetween and limited angular movement of said conveyor screw about its driven end, a bearing, a sleeve rotatably mounted in said bearing, said sleeve receiving the other end of said intermediate shaft, said sleeve and intermediate shaft being arranged for rotation one with the other, and a drive connection between said sleeve and said driving shaft providing for limited axial misalinement between said intermediate and driving shafts.

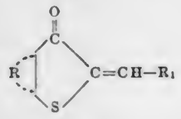
2,449,241
IMIDAZOLINES
Karl Miescher and Willi Klarer, Riehen, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J.
No Drawing. Application March 10, 1945, Serial No. 582,189. In Switzerland March 23, 1944
4 Claims. (Cl. 260—309.6)



1. The 2-(N-aryl-N-aralkyl-aminoalkyl)-imidazolines, the aminoalkyl group being a lower aminoalkyl group.

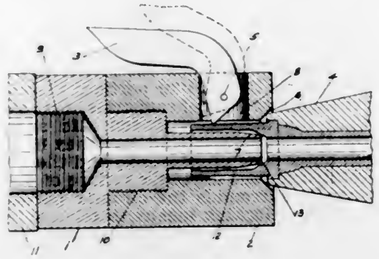
2,449,242
SKI BINDING
Everett L. Millard, Highland Park, Ill.
Application January 12, 1945, Serial No. 572,474
2 Claims. (Cl. 280—11.35)

1. A ski binding to hold a shoe to a ski having toe plates to engage the opposite sides of the forward portion of the shoe and a device to hold the heel of the shoe toward the ski and the forward end of the shoe toward the toe plates, characterized by the fact that the binding is open above, the toe plates at their sides have inner surfaces inclined inwardly and upwardly over parts of the forward portion of the shoe to retain the forward portion of the shoe to the ski, and the toe plates are yieldable about axes substantially parallel to the length of the ski to permit the upward escape of the shoe from the toe plates on the exertion of abnormal stresses on said inclined surfaces.



2,449,243
SELF-ALIGNING PUMP FLANGE
Paul Burt Miller, Los Angeles, Calif., assignor to Pacific Pumps, Inc., Huntington Park, Calif., a corporation of California
Application October 10, 1944, Serial No. 557,952
9 Claims. (Cl. 285—135)

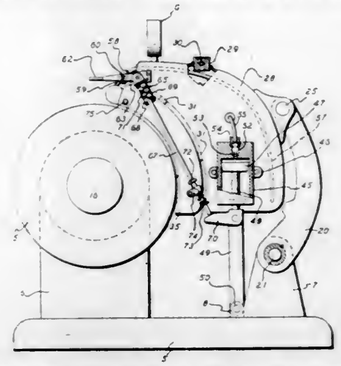
1. In a device for flexibly connecting a pipe to a pump flange to prevent disalignment due to forces transmitted to the pump from the pipe and to permit attachment of a pipe turning sharply close to the flange, said pipe providing an end adjacent a flat attachment surface of said pump flange, said device including in combination: a sealing ring formed of deformable material surrounding said pipe at said end and providing an inner cylindrical surface adapted to surround and engage the periphery of said pipe immediately adjacent said end and providing an outwardly-extending surface adapted to engage said attachment surface of said pump flange; and clamp means movable with respect to said pipe and said pump flange for simultaneously compressing said sealing ring in sealing engagement with said periphery of said pipe and said attachment surface of said pump flange.



2,449,244
THIOINDOXYL COUPLERS FOR COLOR PHOTOGRAPHY
Fritz W. H. Mueller and Abraham Bavley, Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application January 25, 1945, Serial No. 574,619
6 Claims. (Cl. 95—6)

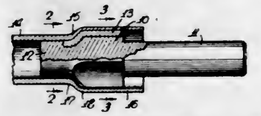
1. A color-forming photographic developer comprising an aromatic primary amino developing agent and a coupler compound of the formula:

wherein R represents the atoms necessary to complete a six-membered isocyclic ring, and R_1 represents an aromatic radical.



2,449,245
AIR HOSE CONNECTION
John J. Nelson, Birmingham, Ala., assignor of one-half to T. J. Rozar, Birmingham, Ala.
Application April 15, 1946, Serial No. 662,356
2 Claims. (Cl. 285—170)

1. An air hose connection of the class described comprising; two round metal members, one member having a comparatively large hole in one end and threads in the interior wall thereof, the threaded wall of the hole adapted to screw onto a threaded hose connector of corresponding size, the middle portion of the member being approximately half the diameter of the hole end portion, screw threads in the outer face of the middle portion, the other end portion being approximately one third the diameter of the middle portion and terminating in a beveled end, the beveled end being a size to fit into the beveled wall seat in a standard pneumatic tire tube valve stem with valve core removed, a hole of smaller diameter than the larger hole diameter and leading through the center of the middle and smaller end portions; the second metal member being round and having a comparatively large hole in the face of one end and screw threads in the interior wall thereof of a size to screw onto the middle threaded portion of the other metal member, a hole through the other portion of the second member, a slot in this hole leading through the second member, a curved lever mounted on a shaft attached within the slot, the lever having an integral V-shaped sharp end, the lever made of steel, the V point end of the lever adapted to fit between two threads on the outside of the end of a standard pneumatic tire tube stem when the stem is inserted in the hole in the member having the lever in the slot of the wall of the hole.

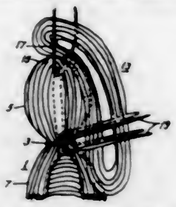


2,449,246
IRONING MACHINE
Herbert E. Page, Alhambra, Calif.
Application March 19, 1945, Serial No. 583,542
3 Claims. (Cl. 38—14)

1. In an ironing machine, a base, an ironing roll rotatably mounted on the base, means for rotating the roll, a pressing head mounted for to and fro motion relative to the roll, said head having a fluid chamber and ports communicating with the chamber and disposed towards the roll, heating means in the head disposed to heat fluid in said chamber, a liquid tank carried by the head, a conduit providing communication from the tank to the chamber, a valve controlling said conduit, pump means associated with the tank and operable by virtue of each to and fro movement of the head to create pressure on liquid in the tank, and valve-actuating means operable by virtue of

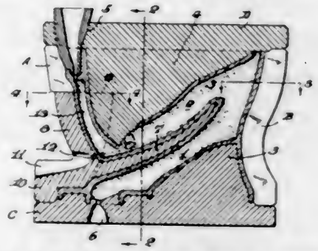
movement of the head toward the roll to open said valve.

2,449,247
METHOD FOR FORMING TUBULAR STRUCTURES
Andrew Joseph Paucek, Flushing, N. Y., assignor to Burndy Engineering Company, Inc., a corporation of New York
Application March 25, 1944, Serial No. 528,137
1 Claim. (Cl. 153—81)



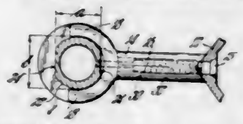
The method of shaping metallic tubular stock with a tool which consists in applying the tool to the stock at room temperature at a plurality of points around the end circumference of the stock with a plurality of free areas in between, the points of contact having a total circumferential length less than the total circumferential length of the free areas and simultaneously applying pressure and rotating the tool and stock relatively to each other sufficiently to deform the stock to the initial shape of the tool and to work harden the deformed metal of the stock sufficiently to prevent further deformation of the metal, thereafter applying additional pressure to create sufficient friction to cause the temperature of the work hardened metal to rise to the annealing point and make the work plastic to enable the tool to further deform the annealed work-hardened section to permit the tool to advance and work harden the metal of the stock in advance of the annealed work hardened section, and continuing the process until the desired longitudinal deformation has been obtained.

2,449,248
COIFFURE FOR DOLLS
Beryl B. Petschauer, Oakland, Calif.
Application October 22, 1945, Serial No. 623,682
6 Claims. (Cl. 46—172)



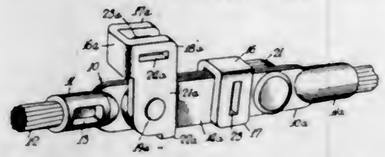
1. The method of preparing a coiffure for a doll or the like comprising applying a roll of yarn or the like to the head of such doll and of a length extending from the forehead to below the neckline thereof, anchoring said roll to said head at the crown in spaced relationship to the upper end of said roll, and anchoring said roll at approximately the neckline of such doll in spaced

relationship to the lower end of said roll, the intermediate portion of said roll conforming to the



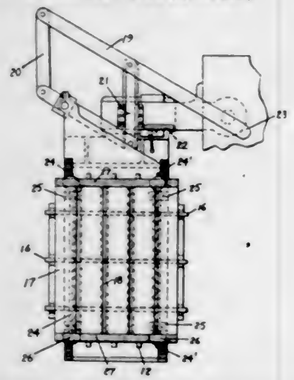
head, leaving the end portions free for artistic arrangements.

2,449,249
METHOD OF AND MOLD FOR CASTING VITREOUS WATER CLOSET BOWLS
Joseph W. Pieslak and Raymond E. Crane, Kittanning, Pa.
Application November 15, 1944, Serial No. 563,532
9 Claims. (Cl. 25—129)



1. In a mold for casting water closet bowls having a trapway including an upleg and a downleg, the combination of a base mold wall having its top configured to form the base of a bowl structure, upright side wall members supported on the base wall and configured to define sides of the bowl, a top mold wall member supported upon the top edges of the side mold wall members and having a depending core portion spaced from the upright side mold wall members to define the inner face of the bowl, and a plug member insertable and removable through a wall of the mold and having a portion disposed between the core and the base wall member said plug being spaced from the core to define an upleg between the core and the plug, and also spaced from the front and bottom walls of the mold to define a downleg between said parts, the bottom of the core, the front wall of the mold and the inner end portion of the plug being spaced to define an elbow passage between said parts and connecting the inner ends of the upleg and the downleg.

2,449,250
LAMP AND A SUPPORT THEREFOR
Karl C. Richter, West Springfield, Mass.
Application May 3, 1947, Serial No. 745,838
2 Claims. (Cl. 240—52)

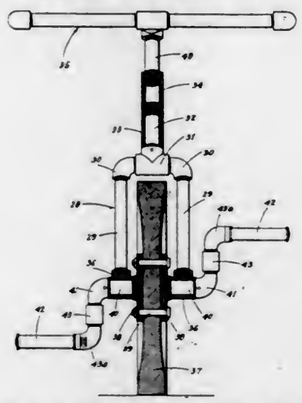


1. The combination of a lamp and support therefor comprising, a lamp having a vertical upright of a certain diameter provided intermediate its upper and lower ends with an annular groove therearound forming a reduced neck and upper and lower shoulders at opposite ends thereof, said neck having opposite flat parallel sides and circular portions therebetween having a certain radius, a support having a vertical plate and a stem extending horizontally forwardly therefrom provided with spaced arms forming a fork having a circular inner surface with a radius slightly greater than that of said neck, the distance between outer, inner and adjacent ends of said arms being slightly greater than the dimension across the flat sides of said neck but less than the dimensions across the circular portions thereof and the vertical dimensions of said arms being slightly less than the distance between said shoulders whereby the flat sides of said neck may be passed through outer ends of said arms and the upright then rotated so that the inner surface of the fork substantially surrounds the circular portions of said neck, and locking means to releasably lock said upright against rotation in said fork.

2,449,251
SEPARABLE CONNECTOR
Julian Rogoff, New Rochelle, N. Y., assignor to Burndy Engineering Company, Inc., a corporation of New York
Application July 21, 1945, Serial No. 606,324
8 Claims. (Cl. 287—76)

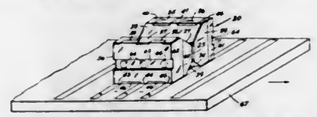
1. A connector comprising two portions, each of said portions having a face section for positioning one against the other, interlocking means to prevent movement of the sections in the plane of the respective faces, gripping means for preventing separation of the two portions in a direction normal to the plane of their faces, said gripping means being pivotally mounted on one of said portions and movable in the plane of the faces.

2,449,252
PROFILING DEVICE
Charles O. Rothweiler, Milwaukee, Wis.
Application May 8, 1945, Serial No. 592,661
3 Claims. (Cl. 90—13.1)



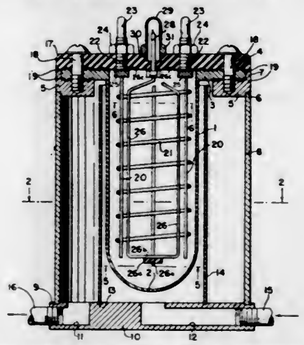
3. A device of the character described comprising in combination with a pantograph, a base, an auxiliary carriage, a table top, means for guiding said carriage on said base in one direction and guiding said tabletop on said auxiliary carriage in a transverse direction, shafts mounted in bearings supported by the upper face of said carriage, shafts mounted in bearings supported by the upper face of said base, all of said shafts provided with gears, gear racks disposed on the bottom of said table and bottom of said auxiliary carriage, said gear racks arranged for contact with and in direct alignment with said gears, for controlling and equalizing the movement of said table top on said auxiliary carriage by means of said pantograph and the movement of said auxiliary carriage on said base.

2,449,253
PREPARATION OF HOLLOW GEL SPHEROIDS
Edmund L. Sargent, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 23, 1945, Serial No. 601,312
9 Claims. (Cl. 252—317)



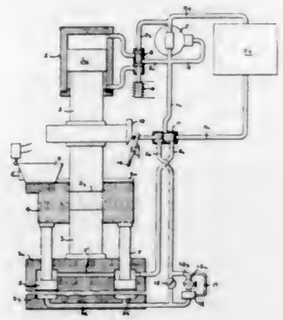
1. A process for the manufacture of hollow inorganic oxide gel spheroids which comprises forming a hydrosol of inorganic oxide having the inherent properties of setting to a hydrogel without change in chemical composition after the lapse of a period of time and of passing through a viscous state just prior to gelation, injecting said viscous sol at a temperature in excess of its boiling point at the pressure existing in the medium hereinafter defined and during the said viscous state as a plurality of drops into a fluid medium maintained at a temperature in excess of said boiling point and at a pressure below the vapor pressure of said sol at the time of injection as aforesaid; whereby the water content of said hydrosol is vaporized, expanding the drops to hollow spheroids and gelled in that form.

2,449,254
TRICYCLE
Le Roy W. Sly, Kyburz, Calif.
Application February 3, 1945, Serial No. 575,973
1 Claim. (Cl. 301—2.5)



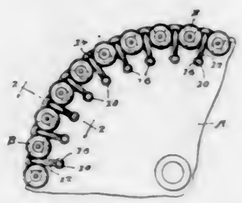
A wheel and crank axle mounting for a cycle comprising a supporting fork having threaded terminals, a T threaded on each threaded end of the fork, such T's being axially alined and smooth bored from end to end, a wheel having a hub provided with central alined threaded orifices, stub shafts mounted in the bores of the T's, such stub shafts comprising end threaded pipe nipples, each nipple being threaded into one of the hub orifices, and a foot crank threaded onto the outer end of each nipple.

2,449,255
WORK-HOLDING DEVICE
Harold A. Sneckner, Richmond Heights, Mo., assignor to Clark F. Ross, Richmond Heights, Mo.
Application December 11, 1944, Serial No. 567,715
4 Claims. (Cl. 175—367)



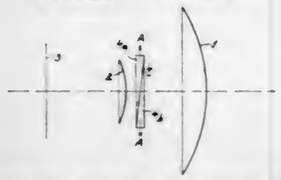
1. A magnetic work-holding device for use with a magnetic chuck comprising in assembly a plurality of metallic bars exhibiting magnetic properties and having a plurality of angular surfaces, means for holding said bars in opposed parallel relationship with each other, a non-magnetic separator disposed between said bars, said angular surfaces of the latter forming a plurality of work-holding channels extending longitudinally of said assembly, a plurality of non-magnetic inlays inserted in the faces of said bars whereby a plurality of magnetic pole contact points are formed, said contact points lying in two pairs of parallel planes which are at right angles with each other.

2,449,256
EXTERNAL ANODE POWER AMPLIFIER AND OSCILLATOR TUBE
Charles R. Stevens, Toledo, Ohio, assignor, by mesne assignments, to Glass Fibers, Inc., Waterville, Ohio
Application November 4, 1946, Serial No. 707,701
10 Claims. (Cl. 250—27.5)



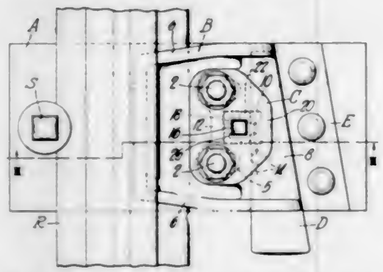
1. A relatively low voltage, low vacuum thermionic device comprising a hollow anode closed at one end and having an outwardly extending metal flange of substantial thickness at the other end, said flange having corrugations on one side, a cover resting on said corrugations closing the open end of the anode, said cover having recesses receiving the corrugations of the flange, screw means passing through said cover and entering the anode flange detachably securing the cover to said flange in order to provide a fluid tight seal at the corrugations, an electrostatic control member and a cathode within said anode, combined support and leading-in conductors for said control member and cathode, and detachable means securing said support-conductors to said cover in order to effect a fluid tight seal therebetween.

2,449,257
PRESS FOR POWDERED METALS
Warren R. Tucker, Dayton, Ohio, assignor to The H-P-M Development Corporation, a corporation of Delaware
Application September 1, 1942, Serial No. 456,961
1 Claim. (Cl. 78—0.5)



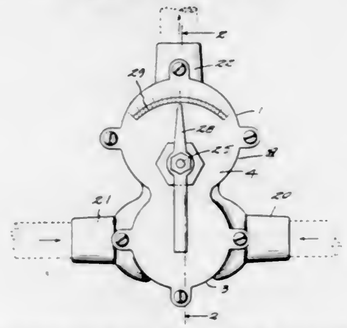
In combination in a press, a pressing member, a platen, a floating mold having a cavity into which said member and platen are movable from opposite ends thereof to press material therebetween, means for actuating the pressing member, means for actuating the floating mold over said platen in the same direction as the pressing member, means for regulating the rate of movement of the floating mold to a lesser rate of speed than the pressing member, means for continuing the movement of the floating mold in the same direction to strip it from the work being pressed, and means for retracting the pressing member.

2,449,258
BOBBIN LOCK
Wilfred J. Vaillancourt, Fall River, Mass.
Application September 11, 1946, Serial No. 696,304
1 Claim. (Cl. 139—249)



In a rotary magazine for weft replenishing looms, a bobbin carrying disc, V-shaped spring elements having screw attaching eyes at the vertexes thereof with outwardly extending arms having inwardly curved ends and wherein the arms are urged outwardly by spring tension of the elements, said V-shaped spring elements being mounted on the inner surface of the disc adjacent the periphery thereof and positioned midway between the heads of the bobbins carried thereby, whereby outward pressure of the arms holds the arms in frictional engagement with the heads of adjacent bobbins to prevent rolling thereof.

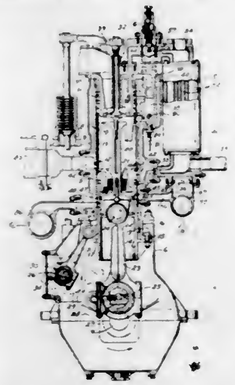
2,449,259
SCHMIDT TYPE OPTICAL SYSTEM WITH PARALLEL PLATE REFRACTIVE ELEMENT
Pieter Martinus van Alphen, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 18, 1946, Serial No. 663,143
In the Netherlands July 1, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 1, 1961
3 Claims. (Cl. 88—57)



1. A Schmidt type optical system comprising a concave spherical mirror, a correction element calculated to correct by refraction for the spherical aberration of said mirror and to provide a finite throw distance for said system, and means to vary the throw distance of said spherical mirror and correction element comprising a refractive optical element having substantially parallel plane refractive surfaces interposed between said mirror and the short conjugate focal surface of said system.

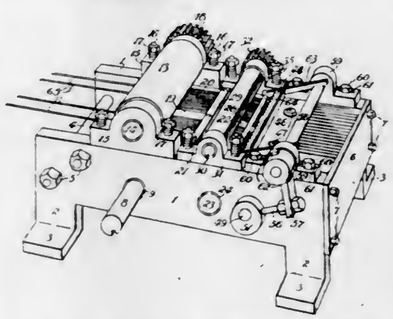
2,449,260
RAIL BRACE
George S. Vickroy, Johnstown, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Original application August 10, 1945, Serial No. 610,029. Divided and this application December 24, 1947, Serial No. 793,700
2 Claims. (Cl. 238—292)

1. An adjustable rail brace including a tie plate having an abutment extending thereacross, an adjustable brace member mounted on said tie plate and adapted to abut and position a rail disposed on said tie plate, said brace having an overhanging cover extending outwardly to said abutment, a wedge member disposed beneath said cover and engaging said abutment and said brace to adjust said brace, the edge of said wedge member abutting said brace being serrated, said brace having a vertically extending aperture in its midportion, a downwardly extending boss under said brace inwardly of said aperture, means for securing said brace to said tie plate and for securing locking members on said brace, said locking members comprising a plate member having an aperture therein, and an insert disposed in said vertically extending aperture below the aperture in said plate member, at least one rib on each side of said insert, some of said ribs being located at different locations on the sides of said insert, an upwardly extending stud on said insert adapted to extend into the aperture in said plate member, the inner side of said insert adapted to engage said boss and the rib on the outer side adapted to engage a serration on said wedge, said cover and said plate member overlying the wedge and the serrated locking edge thereon.



2,449,261
THERMOSTATICALLY CONTROLLED MIXING VALVE
Floyd L. Watrous and George E. Manis, Huntington, Ind.
Application August 27, 1945, Serial No. 612,946
1 Claim. (Cl. 236—12)

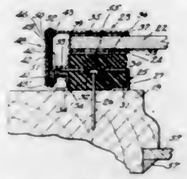
In a thermostatically controlled mixing valve of the character specified, a casing comprising upper and lower communicating cylindrical sections of larger and smaller diameter, respectively, said upper section forming a mixing chamber and said lower section a valve chamber and said valve member formed in opposite sides with circumferential ports or openings, a thermostat mounted in the mixing chamber, a hollow cylindrical reciprocating piston valve, slidably mounted in the valve chamber and formed in opposite side walls with a series of circumferential inlet ports or openings adapted to register with corresponding ports or openings in opposite sides of the valve chamber, with the two series of ports of the piston valve arranged in alternating or staggered relation, parallel links between the thermostat and piston valve, a roller carried between the upper ends of said parallel links, an adjustable stop disposed in the path of movement of said roller, a coil spring normally holding the piston valve in forward position and tending to resist the inward stroke of said valve, said roller adapted to engage the aforesaid stop when the thermostat expands and acts as a fulcrum on which the lower ends of the links swing inwardly, horizontal oppositely disposed hot and cold water inlets communicating with opposite sides of the valve chamber and an outlet at the top of the casing for the water to be delivered.



2,449,262
VALVE ARRANGEMENT FOR EXTERNAL-COMBUSTION ENGINES
Daniel Michel Weigel, Detroit, Mich.
Application February 4, 1943, Serial No. 474,671
8 Claims. (Cl. 60—44)

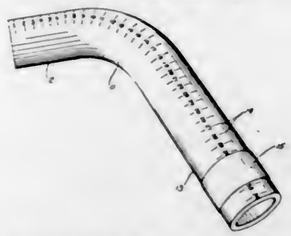
1. In combination with an external combustion engine having a combustion chamber, a reservoir of compressed gas, means driven by the engine for compressing gas into said reservoir, a throttle valve controlling the pressure of the gas compressed by said means, a conduit for admitting gas from said reservoir into said combustion chamber, a valve operated by said engine interposed in said conduit, a pump for injecting controllable quantities of fuel into said combustion

chamber, a regulating valve in said conduit interposed between said reservoir and said first named valve, and means exerting a constant pressure on said regulating valve urging the same toward closed position to interrupt communication between said reservoir and said engine, said regulating valve being urged toward open position by the pressure in said reservoir.



2,449,263
MACHINE FOR MANUFACTURING HAIR SLIDES, HAIR PINS, OR THE LIKE
William Murray Welsford, Melbourne, Victoria, Australia
Application January 29, 1947, Serial No. 724,994
In Australia February 15, 1946
8 Claims. (Cl. 140—87)

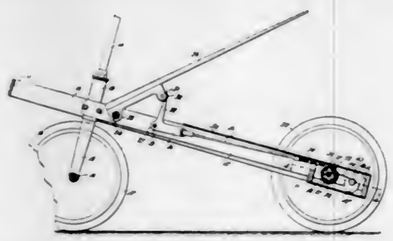
1. A machine for manufacturing hair slides, hair pins or the like comprising two parallel rollers adapted to be rotated in opposite directions and to feed a wire therebetween; a cutter associated with each roller, the cutters being adapted to interact to sever the said wire and to bend an end of the wire from which portion has been severed; corrugated portions associated with each roller and adapted to interact to impart undulations to the wire; a bending plate upon which the wire shaped by the rollers is adapted to bear; a bending member adapted to be moved in syn-



chronization with the said rollers to impart a U-bend to the wire between the said fixed plate and the said rollers; and means for clinching the portions of the wire adjacent to the U-bend.

2,449,264
STORM WINDOW
Farley J. Wilkinson, Homewood, Ill.
Application August 31, 1946, Serial No. 694,189
8 Claims. (Cl. 160—90)

1. Screen and storm window construction comprising a frame permanently attached to a window sash and a panel-supporting member carried by said frame, said member and frame being mutually secured by slidable locking means.

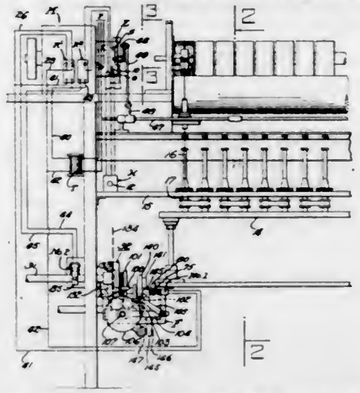


2,449,265
ADJUSTABLE CONDUIT FOR RADIATOR AND ENGINE CONNECTION
Glenn B. Williams, Ralston, Nebr.
Application November 8, 1947, Serial No. 784,914
1 Claim. (Cl. 138—49)

In conduits for use between an engine having a cooling system and a radiator to conduct a cooling medium from the engine cooling system to the radiator and from the radiator back to the engine cooling system wherein the exit from the engine cooling system is in a different plane from the entrance to the radiator and the exit from the radiator being in a different plane from the entrance to the engine cooling system necessitating a bend or curve in the conduits when the conduits are coupled between the entrance and exit of the radiator to the exit and entrance respectively of the engine cooling system, the improvement comprising a flexible conduit having a preformed curved portion, a straight portion of conduit extending from each end of the curved portion of the conduit, said straight ends adapted to be severed perpendicularly to the axis through the conduit at any selected point inwardly of the straight ends to provide a connection between an engine cooling system and a radiator independent of the location of each.

2,449,266
FOOT PROPELLED VEHICLE
Samuel J. Woods, Newport, R. I.
Application March 25, 1947, Serial No. 736,991
7 Claims. (Cl. 280—251)

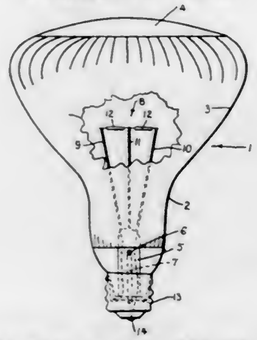
6. A foot propelled vehicle having a frame structure, a steering wheel and control means therefor mounted at the front part of said frame structure, a rotatable axle shaft mounted on the rear part of said frame structure and driving wheels mounted on said axle shaft, a pair of treadles pivotally mounted on the frame structure, bell-crank members pivotally supported in connection with the frame structure respectively beneath said treadles, each bell-crank member comprising an upwardly extending cam arm and a rearwardly extending draft arm, each treadle having a thrust means including an antifriction roller dependent from the underside thereof adapted to operatively engage the cam arm of the underlying bell-crank member, roller clutch members, each clutch member comprising a driven element fixed on the axle shaft and an oscillatable driver element rotatable about the axle shaft, each oscillatable driver element having a hub portion and a sprocket unitary with said hub portion, a pull chain affixed to each hub portion to normally extend over said sprocket,



means to couple said pull chains respectively in connection with the draft arms of the respective bell-crank members, and a spring means operative in connection with the hub portion of the driver element of each clutch member to effect recovery movement of said driver element and the bell-crank member and treadle cooperative therewith.

7. A foot propelled vehicle as defined in claim 6 wherein each recovery spring means comprises a spring drum, means for rotatably mounting said drum adjacent to the clutch member served thereby, a spiral spring in said drum having its inner end anchored to the drum mounting means and its outer end to the drum, a winch barrel unitary with said drum but eccentric to the axis of rotation thereof, and a flexible pull strap secured by one end to said winch barrel in normal wound relation thereto and by its other end to the hub portion of the driver element of the corresponding clutch member.

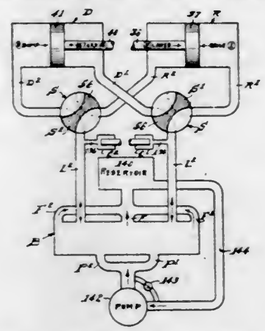
2,449,267
RING SPINNING FRAME
Harold S. Adams, Skowhegan, Maine, assignor to American Woolen Company, New York, N. Y., a corporation of Massachusetts
Application August 30, 1947, Serial No. 771,413
5 Claims. (Cl. 57—79)



1. In a ring spinning frame having a builder motion which traverses the ring rail and the spindle rail with respect to each other, the combination therewith of a power circuit, a control circuit, a relay having normally closed contacts in the power circuit and controlled by current in the control circuit, two normally open switches in the control circuit, mechanism which closes the first of said switches at a predetermined position of the spindle rail, and mechanism which

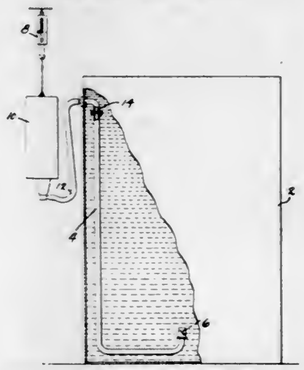
closes the second of said switches after the closing of the first switch, the closing of both of said

switches occurring during the last traverse of the spindle rail.



2,449,268
ELECTRIC LAMP
Willard J. Allphin, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application May 29, 1947, Serial No. 751,173
1 Claim. (Cl. 176—34)

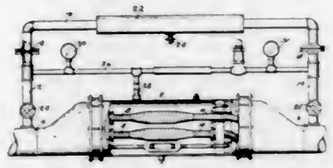
In combination, an incandescent lamp comprising a bulbous envelope, a filament mounted in said envelope, a translucent coating on the inner wall of said envelope extending over the neck portion and slightly beyond the maximum diameter thereof, and a shade enclosing said lamp, said shade being open at the top and the bottom thereof and defining in conjunction with said lamp a cone of light of about 40 degrees at the top thereof and about 70 degrees at the bottom thereof, the apex of said first mentioned cone being at said filament and the apex of said second mentioned cone being about 1½ inches below said filament.



2,449,269
SELECTIVE HYDRAULIC CONTROL STRUCTURE
Ellsworth W. Austin, Cedar Rapids, Iowa, assignor to La Plant-Choate Manufacturing Co., Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application August 10, 1945, Serial No. 610,116
11 Claims. (Cl. 60—97)

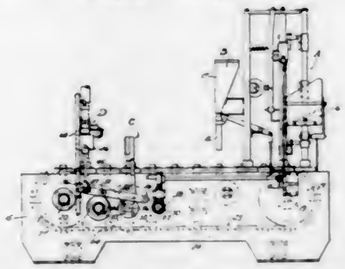
10. In a hydraulic system of the character disclosed, a plurality of hydraulically actuated devices, a selector valve connected therewith, hydraulic fluid supply lines connected with said selector valve, said selector valve, in different positions thereof, connecting said lines with different ones of said hydraulically actuated devices, means affording build up of pressure in both

of said lines, hydraulic actuating mechanisms connected with said lines and operable upon build-up of pressure in both to condition said selector valve for indexing to a newly selected position, said selector valve having an indicator thereon to show the position of the valve.



2,449,270
APPARATUS FOR PROTECTING INFLAMMABLE LIQUIDS AGAINST FIRE
Charles E. Bennett, Ridgewood, N. J.
Application September 29, 1944, Serial No. 556,437
1 Claim. (Cl. 169—4)

In combination with a tank of inflammable liquid, a container of dichlorodifluoromethane at the exterior of the tank and under sufficient pressure to maintain the dichlorodifluoromethane in the liquid phase, a tube extending from the container into the tank near the top thereof and along the tank wall to a point adjacent the bottom of the tank and thence inwardly of the tank to approximately the center line of the tank, and a fusible diaphragm across said tube adjacent the surface of the inflammable liquid, said diaphragm fusing at substantially the flashpoint of said inflammable liquid, whereby upon a rise in the temperature of the inflammable liquid at its surface approximating its flashpoint the dichlorodifluoromethane will be released into the liquid adjacent the bottom thereof, some of the dichlorodifluoromethane remaining in solution in



the inflammable liquid to convert the liquid to a non-inflammable mixture of liquid and dichlorodifluoromethane, the remainder of the dichlorodifluoromethane rising to the surface of the liquid.

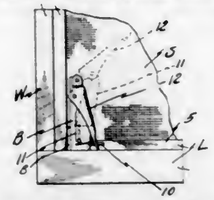
2,449,271
JOINT STRUCTURE FOR CABLES
Charles E. Bennett, Ridgewood, and Paul V. White, Rochelle Park, N. J., assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey
Application November 29, 1945, Serial No. 631,688
4 Claims. (Cl. 174—11)

1. The combination of an electric cable system embodying an insulated conductor immersed in an insulating liquid enclosed in a pipe line under superatmospheric pressure, of a joint structure comprising a joint housing uniting adjacent ends of two lengths of said pipe line, a by-pass around said joint housing comprising a pair of tubular legs communicating with the pipe line at each side of the joint housing, a normally empty cross connection between said legs, a rupturable diaphragm in each leg between the cross connection and the pipe line adapted to be ruptured by a pressure impulse produced in the insulating liquid by an electrical fault, a valve for each leg intermediate the diaphragm and pipe line, and means for draining said cross connection with either of said valves closed, thereby to determine which diaphragm has been ruptured.

2,449,272
MEANS FOR VACUUM SEALING FLEXIBLE PACKAGES
Samuel H. Berch, Beverly Hills, Calif., assignor to The Flexible Vacuum Container Corporation, Los Angeles, Calif., a corporation of Nevada
Application January 22, 1944, Serial No. 519,372
1 Claim. (Cl. 93—6)

Means for shaping and vacuum sealing filled flexible containers, which includes a mold within which a filled container is positioned and which mold agrees substantially with the final configuration of the sealed package desired, a sealing head adapted to assume a sealed position with relation to the mold and whereby a vacuum-tight chamber will be formed including said head and the mold, a pair of blades mounted within the head adapted to assume positions at opposite sides of the flexible unfilled portion of the container projecting above the mouth of the mold, pivotal mountings for said blades whereby the blades may swing to positions in a common plane normal to the top of the package being sealed, the free edges of said blades engaging opposite side walls of the mouth of the flexible container, whereby said side walls will be moved together substantially along the median line of the package, said free blade edges overlapping when lying in the same plane to fold the free portion of said side walls substantially in a plane parallel to that assumed by the blades, a sealing bar adapted to move with relation to said blades when they have assumed a common plane to fold the outer end of the container walls in a reverse direction from the original fold and at an acute angle thereto, means for heating said sealing bar, means for moving said folding blades and the sealing bar in synchronism to fold the mouth of the package and thereafter seal the same by the exertion of heat and pressure by the sealing bar, and suction means associated with the vacuum-tight chamber whereby the interior and exterior of the package will be subjected to suction action and after which the sealing bar will cooperate with a folding blade to heat seal the mouth of the package.

2,449,273
ADJUSTABLE FLEXIBLE BAND
Nino Bisso, New York, N. Y.
Application October 18, 1946, Serial No. 704,251
6 Claims. (Cl. 59—79)

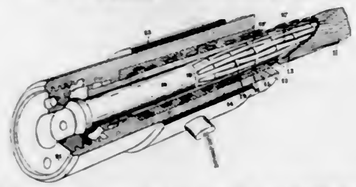


1. An adjustable flexible band comprising a plurality of links pivotally connected to each other at their adjacent ends, respectively, by pivot pins, adjacent links being each provided with a pair of lateral spaced slots in which the pivot pin between adjacent links has a limited movement in opposite directions longitudinally of the band, and means carried by one of said links and adjustably engageable with the companion pivot pin of the adjacent link for releasably holding said companion pivot pin at either of the opposite ends of said pair of slots.

2,449,274
SELF-INDICATING QUATERNARY AMMONIUM BACTERIOCIDAL COMPOSITION
Harry R. Broll, Baltimore, Md., assignor to Fuld Bros., Inc., Baltimore, Md., a corporation of Maryland
No Drawing. Application May 27, 1946, Serial No. 672,688
10 Claims. (Cl. 167—33)

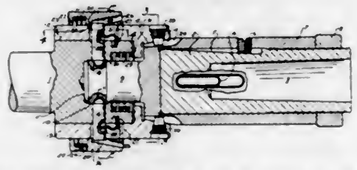
1. A bacteriocidal composition comprising a bacteriocidal quaternary ammonium compound and a fluorescent indicating agent quenched therein and responsive at a predetermined reduced bacteriocidal strength to change the visual aspect of the composition, said indicating agent being selected from the group consisting of fluorescein and uranine.

2,449,275
HOLD-DOWN BRACKET
Fred J. Burns, Saginaw, Mich., assignor to The Columbia Mills, Inc., New York, N. Y.
Application January 24, 1947, Serial No. 724,085
9 Claims. (Cl. 160—328)



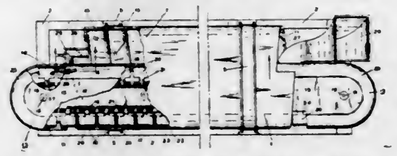
1. A holddown bracket of the class described comprising vertically disposed body portion mounted on a support formed with an offset U-shaped section adapted to accommodate a member to be secured, and a compound lever and

a link assembly pivotally mounted on said body and engageable with said member for locking it when the lever is swung to locked position.



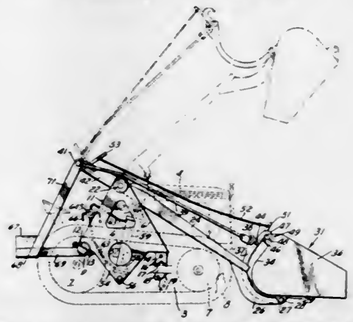
machine, an adapter having means to receive and hold the shank of a cutting tool or cutting tool holder, and intermediate means for engaging and disengaging and for rigidly holding the adapter in a fixed longitudinal position and in axial alignment with respect to said member characterized by the combination of an abutting and axially positioning contact between adjacent ends of said member and adapter whereby exact longitudinal and axial relationship therebetween is established and a further means for centering and supporting said adapter comprising a tapered conical surface in said adapter spaced longitudinally from the said abutting and axially positioning contact, means for mounting on said member in fixed axial alignment therewith but with freedom to move longitudinally thereon a sleeve with a tapered conical surface for engaging the first-mentioned tapered conical surface, and means for urging the tapered conical surface of said sleeve into centering and supporting engagement with said adapter.

2,449,276
PRETENSIONED REINFORCEMENT
Marcel Chalos, Paris, France
Application July 20, 1945, Serial No. 606,116
In France September 30, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 30, 1963
4 Claims. (Cl. 72—50)



1. A reinforcement for use in preconstrained structures comprising a pair of flexible juxtaposed elements of substantial length as compared to their section, one of said elements having a high tensile strength and a high elongation coefficient for being embedded in the structure to be pre-constrained, the other element having high resistance to longitudinal compression, the first-mentioned element being tensioned strongly, while using the ends of the second-mentioned element as a bearing and remaining thus tensioned until the reactions that balance the tensile stress are transferred from the second-mentioned element to the structure in which the reinforcement has meanwhile been embedded, none of said elements exhibiting any resistance to bending, while stability to buckling is ensured as a result of practically continuous radial reactions being exerted by each element upon the other.

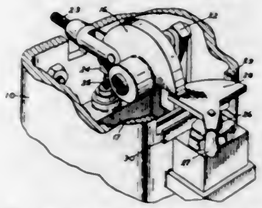
2,449,277
QUICK LOCK TOOLHOLDER
Charles A. Cherry, Berkley, Mich., assignor to Beaver Tool & Engineering Corp., Royal Oak, Mich., a corporation of Michigan
Application October 8, 1945, Serial No. 621,107
9 Claims. (Cl. 279—81)



1. A tool holder comprising a member adapted to be held and driven by the rotary spindle of a

2,449,278
CONVEYER
Leo Cieslak, Salem, Oreg.
Application September 27, 1946, Serial No. 699,849
4 Claims. (Cl. 198—215)

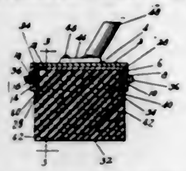
1. A conveyor comprising a rotatable cylinder, a spiral material receiving trough formed within and extending throughout the length of the cylinder, an endless trough cleaning device including scrapers fitting within the spiral trough, and means for feeding the material into the conveyor at one end of the trough.



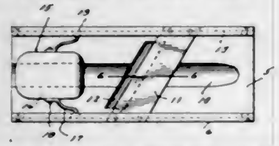
2,449,279
POWER SHOVEL
Johnie E. Conklin, Oakland, Calif.
Application November 19, 1946, Serial No. 710,836
2 Claims. (Cl. 214—140)

1. In a power shovel apparatus for attachment to a conventional track laying tractor including a load-carrying scoop disposed in advance of said tractor and connected to an arm pivotally attached to the tractor and by means of which said scoop may be raised or lowered, an arm supporting frame arranged on said tractor and including attachment means comprising a split-collar sur-

rounding and clamped to the axle housing of the tractor, a rearwardly extending member carried by said split-collar and detachable from the axle having at the rearward end thereof a weight for counterbalancing loads carried by the scoop, and a brace connected at the lower end thereof to said member and connected adjacent the upper end thereof to a support spaced above and substantially paralleling said member, said support being connected with and extending rearwardly from said frame.



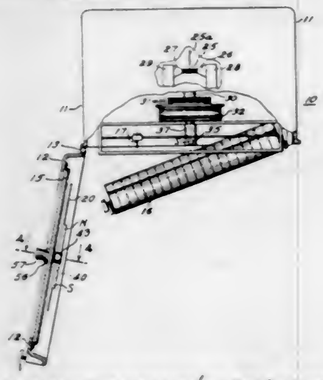
2,449,280
DIE CASTING MACHINE
William Coulthard, Scotby, near Carlisle, England
Application June 19, 1946, Serial No. 677,708
In Great Britain June 27, 1945
3 Claims. (Cl. 22—69)



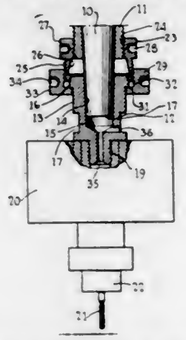
1. In a die casting, molding or like machine, wherein a fixed die portion and a movable die portion cooperate to form a die cavity, an oscillatable crank is pivotally mounted on a support and is connected with said movable die portion to effect movement thereof relative to said fixed die portion, a valve having a pivotal stem and controlling means for feeding plastic material to the die cavity is mounted on the support with the axis of its valve stem at an angle to the axis of said crank, and a lever is fixed on said valve stem for operating said valve, the combination with the afore-mentioned elements of an abutment on said crank for movement therewith through a path in the plane in which the crank moves, and an arm on said lever for movement therewith through a path in a plane transverse the plane of said abutment path, said crank and said valve being mounted adjacent each other on said support to position said abutment and arm paths in intersecting relationship, said crank being mounted on the support to position said abutment to intercept the arm path when said die is open, and said valve being mounted on the support to position said arm to intercept the abutment path when said valve is open, whereby said abutment and said arm are selectively movable between positions free of the respective intersecting path and positions transverse the respective intersecting path so that said abutment will prevent opening of the valve when the die is open and said arm will prevent opening of the die when said valve is open.

2,449,281
SPONGE CLEANING DEVICE
Frank L. Dalton, Ironto, Va.
Application June 14, 1946, Serial No. 676,683
3 Claims. (Cl. 15—244)

2. A cleaning device comprising a back member formed with depending flanges along opposite sides thereof, said flanges being provided on their inner surfaces with longitudinally-extending grooves, a sponge-like cleaning element receivable between said flanges and provided at each side with an upwardly-open slot, clamping inserts adapted to be disposed one in each of said slots and provided with a bead receivable in the groove of the adjacent flange, and means for drawing the positioned insert toward the adjacent flange for clamping the intervening portions of the cleaning element between the flanges and inserts and the grooves and beads thereof.

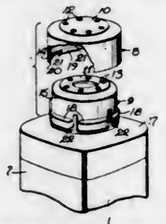


2,449,282
MANUALLY OPERATED VEGETABLE SLICER
Calvin H. Dickman, Brewster, Minn.
Application June 22, 1945, Serial No. 600,983
3 Claims. (Cl. 146—168)



1. A vegetable slicer, comprising a base having an opening formed therein, upstanding sides secured to the base and including longitudinal guide means, a stationary cutter disposed adjacent to the opening and between said upstanding sides, arms pivotally mounted upon the upstanding sides and including parts engaging said longitudinal guide means and movable along the same, and a manually operable plate disposed above the base and pivotally connected to the arms, the arrangement being such that the plate is rockable longitudinally and movable vertically and longitudinally with respect to the base.

2,449,283
RECORDER WITH MAGNETICALLY POSITIONED ELECTRIC INDICATOR
Paul H. Dike, Jenkintown, and Edgar D. Doyle, Philadelphia, Pa., assignors to Leeds and Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 18, 1944, Serial No. 568,736
5 Claims. (Cl. 177—327)

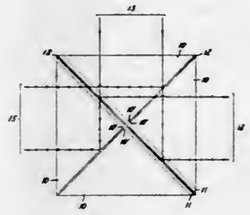


3. In a measuring instrument having means for supporting a driving element enclosed within a housing, an index supported for rotation in front of said driving element, and magnetic means forming a magnetic driving connection between said driving element and said index and subject to variable displacement due to the presence of a stray magnetic field, the method of gravitationally producing a corrective torque to correct for said variable displacement which comprises applying by gravity a torque to said index, and during rotation of said index varying said torque in direction and magnitude to compensate for the torque produced by said stray magnetic field.

2,449,284
MACHINE TOOL ADAPTER
Edward A. Dorman, New Rochelle, N. Y.
Application March 29, 1946, Serial No. 658,246
3 Claims. (Cl. 279—1)

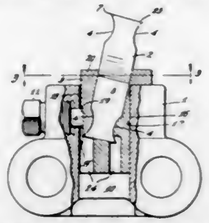
1. A device for mounting a tool on a tapered drill spindle or the like comprising, an adapter having means to mount a tool thereon, said adapter having an interiorly tapered aperture for interengagement with the tapered end of the drill spindle; a connector mountable on said spindle and axially adjustable thereon; and a coupling element adjustably engageable with said connector and movable axially thereof, said coupling element having a portion thereof engageable with said adapter so that upon tightening of said coupling element on said connector the adapter will be adjustably positioned axially on said drill spindle, whereby said adapter can be removably and adjustably held on a drill spindle so as to hold a tool thereon.

2,449,285
ROTARY SIFTER TOP
Ted M. Ekstrom, Rockford, Ill., assignor to J. L. Clark Manufacturing Co., Rockford, Ill., a corporation of Illinois
Application July 17, 1944, Serial No. 545,343
2 Claims. (Cl. 222—548)



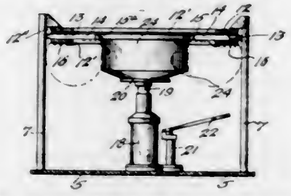
1. A sifter top comprising an outer cup having an arcuate inturned flange extending partially around the peripheral edge of the open cup so that the cup presents a smooth continuous outer side surface and peripheral edge, an inner cup nested into said outer cup against the end wall thereof, an external circumferentially extending projection on the side wall of said inner cup overlying said flange for sliding engagement therewith to hold the cups nested while permitting turning of the outer cup, external stops on the side wall of the inner cup angularly spaced farther apart than the circumferential length of said flange and extending parallel to the axis of the cup on both sides of said projection for receiving said flange between them whereby to locate the cups angularly relative to each other during initial nesting thereof and also to limit turning of the outer cup in either direction, and means on the engaging end walls of said cups defining perforations which register with each other when said flange abuts one of said stops and which are out of register when the flange abuts against the other stop.

2,449,286
PRODUCTION OF 1,3-DIHALOPROPYLENES
Alasdair W. Fairbairn, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 16, 1945, Serial No. 605,453
9 Claims. (Cl. 260—654)



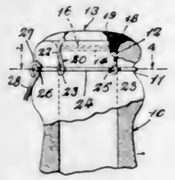
1. A continuous process for the production of 1,3-dichloropropylene which comprises mixing 1,2-dichloropropane with chlorine in a mole ratio of between 1:1 and 3:1, continuously conveying said mixture through a reaction zone, maintaining said mixture in said reaction zone at a temperature of about 500° C. for a fraction of a second, thereby producing a reaction mixture containing 1,3-dichloropropylene and recovering the latter.

2,449,287
POLARIZING BEAM-SPLITTING PRISM
Merrill M. Flood, Washington, D. C.
Application September 23, 1946, Serial No. 698,829
4 Claims. (Cl. 88—65)



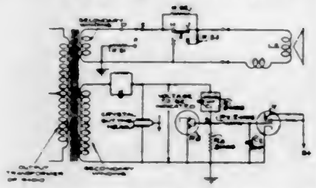
1. A polarizing beam-splitting prism comprising four right-angle prisms of isotropic transparent material mounted with their right angle edges in juxtaposition to form a composite prism, a pair of half-wave retardation plates between adjacent faces of the right-angle prisms along one diagonal interface of the composite prism, a polarizing beam-splitting layer between the half-wave retardation plates, and a polarizing beam-splitting layer between adjacent faces of the right-angle prisms along the other diagonal interface of the composite prism said polarizing beam splitting layers polarizing light by reflection and refraction of light incident at the polarizing angle.

2,449,288
COAL CUTTING BIT AND HOLDER THEREFOR
Frank L. Fulke, Terre Haute, Ind., assignor to Frank Prox Company, Inc., Terre Haute, Ind., a corporation of Indiana
Application June 25, 1945, Serial No. 601,501
3 Claims. (Cl. 262—33)



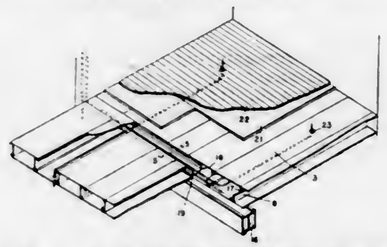
1. In combination with a cutter chain including a link having a socket adapted to receive and support a standard rectangularly shanked mine bit, a keeper having a side received in said socket and fitting one lateral wall of said socket, the side of said keeper opposite said first-mentioned side being formed with an indentation having a wall inclined to said first-mentioned side, and a plural pointed bit of rhomboidal edge outline, one wall of said bit defining such outline fitting in said indentation against said inclined indentation wall, and a angularly related wall of said bit fitting the opposite lateral wall of said socket, the maximum thickness of said bit being substantially one-half the width of said socket, whereby one sharp angle of the rhomboidal outline of said bit is located within said socket and substantially in contact with said last-mentioned socket wall while the other sharp angle thereof is located outside said socket and substantially in the median axial plane of said socket, the lateral outline of the portion of said bit received within said indentation including at least one reentrant section, and the outline of said indentation conforming to said lateral outline of said bit portion.

2,449,289
AXIALLY SHIFTING HYDRAULIC RIM AND TIRE SEPARATING DEVICE
Sanford H. Garey, Uvalde, Tex.
Application May 1, 1945, Serial No. 591,361
1 Claim. (Cl. 157—6)



Tire working apparatus which includes a base, a hydraulic cylinder rising axially from the base, an annular row of circumferentially spaced posts fixed to the base and rising therefrom in spaced relation to the cylinder, a ring fixed to the posts adjacent their upper ends, said ring lying in spaced parallel relation to the base and concentric about the axis of the cylinder, said ring having circumferentially spaced radially disposed guide channels extending therethrough, bars slidable in the guide channels toward or away from the axis of the cylinder, tool heads at the inner ends of the bars for engaging a tire and holding it against upward movement, a fluid actuated plunger slidable axially through the upper end of the cylinder, a tire rim supporting head at the upper end of the plunger and means mounted on the base near the cylinder to introduce fluid under pressure into the cylinder to elevate the plunger and exert a lifting effort against a rim resting on the head.

2,449,290
BOTTLE CAP
Pete Gavriles, Laurel, Md.
Application January 30, 1947, Serial No. 725,215
2 Claims. (Cl. 215—45)



2. A bottle cap comprising a resilient cap having a pair of channels in the upper face thereof, a ball member disposed in each channel, said channels being of a width less than the diameter of the ball members and of a depth to enclose said ball members, whereby to hold said ball members within the channels, each ball member having downwardly extended leg portions terminating in eyelets, a divided ring engaged through respective eyelets of the leg portions and having respective looped ends and cam means operatively engaged with the looped ends of the ring for contracting the latter around the neck of a bottle and exerting a downward pull upon the leg portions of the ball members.

2,449,291
RECORDING APPARATUS VOLUME LEVEL INDICATOR
Paul Stead Gay, Charlotte, Mich., assignor to Wilcox-Gay Corporation, Charlotte, Mich., a corporation of Michigan
Original application February 26, 1940, Serial No. 320,823, now Patent No. 2,351,948, dated June 20, 1944. Divided and this application August 20, 1941, Serial No. 407,620
1 Claim. (Cl. 177—311)

In sound recording apparatus having means for recording audible signals, said means including a source of voltage varying at an audible frequency having variable peak amplitude, a recording member responsive to said variations in said audio frequency voltage source; a first resistance condenser circuit and a diode connected across said recording member; said resistance condenser circuit having a time constant corresponding to a frequency lying within the audio frequency band; said resistance condenser circuit being connected to the anode of said diode; a second resistance condenser circuit connected across said diode; said second resistance condenser circuit having a long time constant compared to said first resistance condenser circuit and corresponding to a frequency lying below the audible frequency band and following only the average of the peaks of the audio frequency fluctuating voltages; and an electron ray tube having a grid and cathode; said condenser of said second resistance condenser circuit being connected across said cathode grid of said electron ray tube for operating said tube to indicate the average of the peaks of said variable audio frequency voltages.

2,449,292
BUILDING STRUCTURE
William Gillett, Grosse Pointe Park, and Edward A. Miller, Detroit, Mich., assignors to Detroit Steel Products Company, Detroit, Mich., a corporation of Michigan
Application June 7, 1944, Serial No. 539,134
4 Claims. (Cl. 189—34)

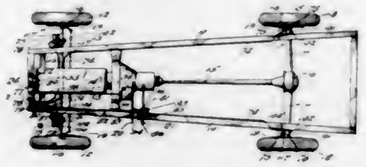
1. A building structure comprising a plurality of units extending side by side and end to end in substantially longitudinal alignment each having a structural element comprising spaced substantially parallel sheets of different width and stiffening members between and secured to said sheets, and a closure, the wider sheets having at their side edges complementary male and female parts for engagement with the female and male parts of the wider sheets of adjacent units, the narrower sheets having at their side edges female parts, the closures having male parts at their side edges for engaging the female parts of the narrower sheets of adjacent units, and a conduit extending transversely of said units and located between adjacent ends thereof, said conduit comprising a trough supported on said stiffening members and adapted to communicate with the spaces closed by said closure, and a closure for said trough.

2,449,293
PROCESS FOR PRODUCTION OF MAGNESIUM COMPOUNDS
Gunter H. Gloss, Redwood City, and Edgar B. Baker, Burlingame, Calif., assignors to Marine Magnesium Products Corporation, South San Francisco, Calif., a corporation of Delaware
Application May 2, 1944, Serial No. 533,704
7 Claims. (Cl. 23—67)

1. In a process for separating out a magnesium compound from an impure hydrous slurry containing one or more magnesium compounds from a group comprising magnesium oxide and magnesium hydroxide, the steps of subjecting a mass of the slurry to contact with a carbon dioxide containing gas, continuously supplying both said slurry and carbon dioxide containing gas to the mass undergoing treatment, controlling the rate of introduction of the slurry and the carbon dioxide containing gas to the mass undergoing treatment so as to maintain the rate of conversion of the magnesium compound to normal magnesium carbonate not in excess of about 0.12 mol per gallon per hour, and the concentration of the carbon dioxide and carbonic acid in the liquid phase in the slurry between the limits of 0.02 to 0.05 mol per liter, such carbonation serving to produce particles of neutral magnesium carbonate of the order of 200 to 400 microns in size, and separating out the neutral magnesium carbonate from the other material of the slurry.

2,449,294
SKI BOOT HEEL CONSTRUCTION
Arthur Guindon, St. Jerome, Quebec, Canada
Application December 26, 1947, Serial No. 793,855
4 Claims. (Cl. 36—2.5)

1. A heel construction affixable to the sole of a boot and especially adapted to ski boots, said construction comprising a hard, U-shaped plate adapted to form the heel periphery, said plate recessed in the upper interior portion to receive said sole, a bar across the ends of said plate adapted to abut the sole, said plate recessed in the lower interior portion, packing elements adapted to be fitted into the lower portion of the plate, a tread shaped to enclose the bottom of said plate and bar, and means for securing said tread to said sole.



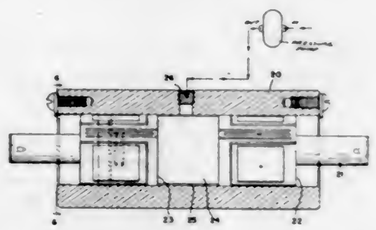
2,449,295
PREPARATION OF AUTOREGENERATIVE CATALYSTS
Carlos L. Gutzeit, San Francisco, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application March 19, 1943, Serial No. 479,819
6 Claims. (Cl. 252—254)

1. The method for the preparation of catalysts suitable for use for dehydrogenation and dehydrocyclization reactions and particularly adapted to be employed in an autoregenerative manner which comprises the steps of forming a coprecipitated mixture of hydrous oxides comprising between 20 and 75 mol per cent (calculated as R_2O_3) of a hydrous reducible oxide of a metal selected from the group consisting of iron and cobalt and between 25 and 80 mol per cent (calculated as Al_2O_3) of alumina, said precipitated hydrous oxides being formed from dilute solution in the presence of sulfate ion at a pH above 6 and under final conditions of pH between 7.0 and 8.0, washing the mixture and impregnating the mixture with a compound of potassium convertible to the oxide by heat in an amount equivalent to between 0.75 and 2.5 mol per cent of potassium oxide.

2,449,296
AUTOMATIC HYDRAULIC JACK
Clarence R. Haight, Cut Bank, Mont., assignor of one-sixth to Vernon T. White, one-sixth to John B. Flugstad, and one-sixth to Lynn G. Clauson, all of Cut Bank, Mont.
Application October 5, 1946, Serial No. 701,592
5 Claims. (Cl. 254—86)

1. An automatic hydraulic jack for automobiles comprising the combination in an automobile

and its engine, a pump unit having a rocker arm, a cam on the engine shaft with respect to which the rocker arm is normally disengaged, a master valve communicating with the pump, hydraulic pressure operated jacks mounted on the automobile axles adjacent the wheels and having plunger operated elements adapted to be lowered into en-



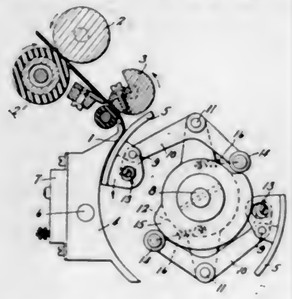
gagement with the ground for raising the axles and wheels, connections between the pump through said master valve with said jacks, said jacks being normally retracted, and dual means for connecting and disconnecting the pump and operating said selector valve to connect the pump and hydraulic pressure supply to the respective jacks at the wheels.

2,449,297

AUTOMATIC FLUID PRESSURE BALANCING SYSTEM

Frank W. Hoffer, Detroit, Mich., assignor, by direct and mesne assignments, to James M. Degnan, Detroit, Mich., as trustee

Application March 26, 1941, Serial No. 385,383
15 Claims. (Cl. 308—122)



1. A device comprising relatively rotatable inner and outer members spaced from and bodily radially movable relative to each other, said members having their opposed surfaces cooperating to form a plurality of circumferentially spaced areas and other areas intermediate and of smaller size than said first mentioned areas, said first and second mentioned areas being arranged in pairs with each pair comprising an area of larger size and an associated area of smaller size on opposite sides of said inner member, one of said members having means for conducting fluid under pressure to each of the areas of smaller size, one of said members having additional means independent of said first mentioned means for conducting fluid from each of the areas of smaller size to the associated areas of larger size, and one of said members having outlet means for conducting fluid from each of the areas of larger size, said opposed surfaces of said members variably controlling the flow of fluid to the areas of smaller size and from the areas of larger size in accordance with relative bodily radial movement of said members.

2,449,298

METHOD OF AND MACHINE FOR APPLYING LABELS

William Hoppe, Longmeadow, Mass., assignor to National Bread Wrapping Machine Co., Springfield, Mass., a corporation of Massachusetts

Application August 9, 1946, Serial No. 689,441
4 Claims. (Cl. 216—29)

2. A device for applying to an article a label having a thermoplastic surface which comprises a shoe having a surface heated to a temperature sufficient to soften the thermoplastic, and means for carrying the label across the shoe with its thermoplastic surface in direct contact with the shoe and thence into contact with the article.

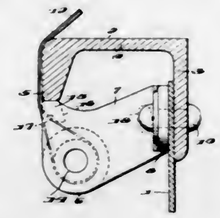
2,449,299

CONTROLLING POLYMERIZATION OF POLYHYDRIC ALCOHOL ESTERS OF ALPHA-OLEFINIC DICARBOXYLIC ACIDS WITH ETHYLENIC MONOMERS

Everett C. Hurdis, Passaic, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application December 30, 1944, Serial No. 570,766
5 Claims. (Cl. 260—45.4)

1. In a method of controlling the oil phase gelling and polymerization of a polymerizable mix comprising a liquid polyhydric alcohol ester of an alpha-olefinic dicarboxylic acid, and a liquid monomeric unsaturated polymerizable compound in which the unsaturation is due to a single terminal ethylenic group which is attached to a negative radical, and in which the said ester is soluble and with which ester it is copolymerizable in the presence of a peroxy polymerization catalyst, said catalyst also being present, that improvement which consists in the step of adding a small but effective amount of a promoter of gelation which is a secondary monoamine that contains attached to the nitrogen atom one functionally aliphatic radical selected from the class consisting of alkyl hydrocarbons having from 1 to 5 carbon atoms and beta-hydroxyethyl, and one aromatic hydrocarbon radical of the benzene series.



2,449,300

ANCHOR FOR LADING RETAINING BANDS FOR OPEN-TOP RAILWAY CARS

Bert R. Jones, West Haven, Conn.

Application October 22, 1947, Serial No. 781,312
9 Claims. (Cl. 105—369)

1. An anchor for a high tension loading band for open top railway cars having top rails respectively secured to the side walls of the car and each top rail being provided with a portion projecting outwardly from the adjacent side wall, said anchor involving means adapted to be secured to a side wall of the car, a portion adapted to be spaced from the adjacent wall of the car and around which a load retaining band is

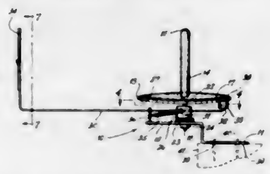
adapted to encircle, and means engageable with the under-side of the outwardly projecting portion of the adjacent top rail for resisting upward pull on the anchor by said band.

2,449,301

RINGLET HAIR CURLER

Frank Interrante, Brooklyn, N. Y.

Application September 27, 1946, Serial No. 699,605
12 Claims. (Cl. 132—40)



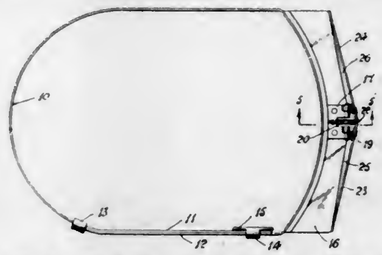
1. In a ringlet hair curler, a generally cylindrical body, said body being formed with two longitudinal diametrically opposite slots on its outer surface, said body further being formed with a diametrally extending slot joining said two slots for substantially half their length.

2,449,302

THREAD FEEDING DEVICE

Stanley J. Ketterer, St. Louis, Mo.

Application November 15, 1946, Serial No. 710,020
9 Claims. (Cl. 242—156)



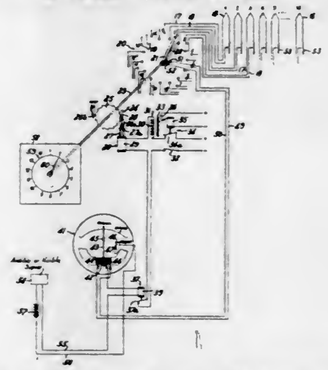
1. A device for feeding thread to a sewing machine from a supply spool comprising a bracket adapted for mounting on a stationary support, an upwardly offset horizontally disposed arm integral therewith, a vertically disposed spindle rigidly secured to said arm, said spindle having a lower perpendicular portion merging into an upper angularly disposed portion, a turntable supported by and freely rotatable about the upper portion of said spindle, means for alternatively starting and stopping the revolution of said turntable automatically at the beginning and end respectively of a sewing operation, and a thread guide comprising an elongated loop member formed on one end of a horizontal rod included in said turntable starting and stopping means.

2,449,303

VISOR

Charles W. G. Laing, Detroit, Mich., assignor to Mayo Visor Co., Detroit, Mich., a corporation of Michigan

Application January 30, 1946, Serial No. 644,222
4 Claims. (Cl. 2—14)

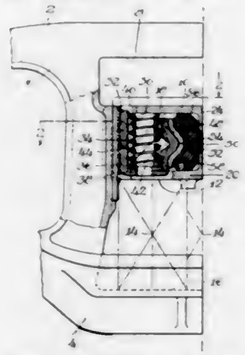


1. In a device of the character described, a head band, a shelf extending forwardly of and about a frontal portion thereof, said shelf being provided with angularly related forward edges converging towards the center of said shelf, a snap hinge affixed to said shelf intermediate its ends, and an eye shade supported by said hinge adapted to swing vertically from a position in front of the wearer's eyes to a position removed from the line of vision, said eye shade being bent along a central area to form angularly related portions of a lesser angle than the angularity of said converging shelf edges and the angular apices of said shelf and said eye shade being spaced apart to an extent whereby the end portions of said eye shade will engage the shelf at points remote from the hinge when said eye shade is in the line of vision so as to support the eye shade at the outer areas thereof.

2,449,304

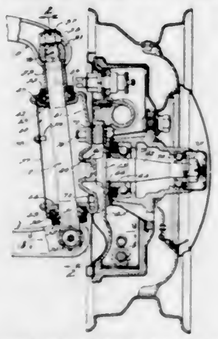
SUPERVISORY ELECTRICAL ALARM SYSTEM

Anthony H. Lamb, Hillside, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey



Application May 16, 1946, Serial No. 670,076
1 Claim. (Cl. 177—311)

In an electric alarm system for supervising a plurality of variable conditions; a signal circuit for each condition, each said circuit including an electric device having a characteristic which varies with the magnitude of said condition and an adjustable impedance for conforming the variable characteristics of all said devices to a common range; an electrical measuring instrument including cooperative stationary and pointer

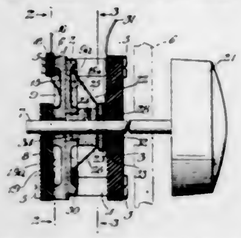


carried contacts one of which is magnetic, a manually actuated release for said contacts and a scale identifying a "normal" and "danger" pointer displacement; a motor driven selector switch arranged to connect said signal circuits in succession to said instrument; a signal device; circuit means operative upon a closure of said contacts to actuate said signal device and stop said selector switch; and an indicator driven by said selector switch for identifying each of the supervised conditions.

2,449,305
SNUBBED TRUCK
Leo A. Lehrman, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 1, 1945, Serial No. 570,842
29 Claims. (Cl. 105—197)

15. In a railway car truck, a side frame having spaced columns, a bolster supported from said frame with pockets adjacent said columns, friction shoes in said pockets in wedge engagement between bolster surfaces and said columns, and a plurality of resilient means associated with said shoes, certain of said resilient means being independently associated with respective shoes to urge them in a vertical direction and other of said resilient means being operative to urge said shoes in a horizontal direction.

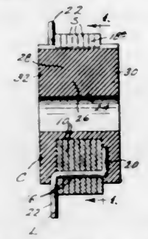
2,449,306
KINGPIN ASSEMBLY
John W. Leighton, Port Huron, Mich.
Application July 24, 1944, Serial No. 546,412
4 Claims. (Cl. 280—96.1)



1. A combined wheel axle and kingpin support comprising a cup shape sheet metal housing having aligned openings in opposed walls with the metal around the openings formed to support kingpin bearings, an axle secured at one end to the base of the housing and projecting therefrom, and a plate element mounted on the axle at a point spaced from said base and also being secured to the base.

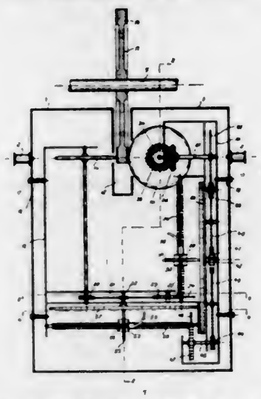
2,449,307
HAND STRAP
Everard C. Mersereau, Staten Island, N. Y., assignor to The Elicon Company, a corporation of New York
Application July 26, 1947, Serial No. 763,977
8 Claims. (Cl. 105—354)

1. In a hand strap, the combination of a hanger having means at one end for reception of a pivot, the other end of the hanger being open and having opposed inwardly convergent walls, a hand loop of rigid tubular material having its end portion entering the open end of the hanger between said walls, a wedge block between the end portions of the loop, the block and the end portions of the loop having interengaging parts, and means engaging the hanger and block and operable to apply pressure through the block to clamp the end portions of the loop between the block and said walls and to hold said parts in engagement.



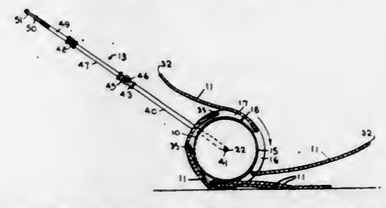
2,449,308
HIGH VOLTAGE CONDENSER
Byron B. Minnium, Erie, Pa., assignor to Erie Resistor Corporation, Erie, Pa., a corporation of Pennsylvania
Application November 23, 1945, Serial No. 630,184
5 Claims. (Cl. 175—41.5)

1. In a variable condenser adapted to withstand high potential differences comprising stator and rotor elements of dielectric material having inner faces in contact with one another, a rotor element having sector-like depressions in its outer face, a condenser plate applied to the surface



of one of said depressions, an adjusting shaft for the rotor, and a spider of conducting material fixed thereto having at least three resilient fingers engaging said rotor, said fingers constituting the sole means of supporting said rotor in contact with said stator.

2,449,309
METHOD OF MANUFACTURING COMMUTATORS
George L. Moeller, St. Louis, Mo., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo., a corporation of Delaware
Original application August 4, 1943, Serial No. 497,349. Divided and this application June 15, 1944, Serial No. 540,527
1 Claim. (Cl. 29—155.54)



A method of manufacturing a commutator comprising stacking a plurality of laminae, extending commutator leads through the stack, bending their ends across the faces of the end laminae, molding a core in and partially around said stack of laminae and around said bent ends of said leads with the exception of one end of each left for a circuit connection, and cutting the laminae at circumferentially spaced points to electrically isolate portions thereof from each other, said portions constituting the commutator segments.

2,449,310
INTEGRATOR
Eduardo Ernesto Moreau, Buenos Aires, Argentina
Application January 28, 1944, Serial No. 520,128
In Argentina October 1, 1943
7 Claims. (Cl. 33—121)

1. In an integrating device, a carriage, supporting wheels on said carriage, a drive wheel journaled in said carriage and driven by one of said supporting wheels, a casing mounted to swing by gravity in said carriage, main discs supported by the casing and mounted for rotation about axes disposed in angular relation to each other and having frictional contact with the opposed side faces of the drive wheel at points coinciding with the swinging axis of the casing, rotatable plates, means for transmitting rotary movement of each of said main discs to one of said plates, driven discs frictionally engaging said plates, means controlled by the main discs for moving the driven discs radially of said plates, and means actuated by and movable in degree proportional to the relative rotation of the driven discs.

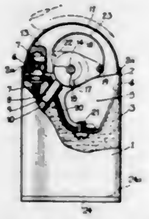
2,449,311
LAND VEHICLE ADAPTED FOR FIRE SUPPRESSION
Philip H. Murphy, Helena, Mont.
Application September 6, 1945, Serial No. 614,774
4 Claims. (Cl. 169—1)

1. In a fire fighting vehicle for grass and range fires, a rotor having a substantially horizontal axis of rotation; a plurality of flaps of flexible fire-resistant material, each flap having a side margin; a separate means connecting each flap, at a side margin thereof, to said rotor, with all of said means extending substantially parallel with said axis and spaced apart, one from another, the size of each of said flaps being such that a portion of at least one of said flaps will underlie said rotor upon rotation thereof, whereby said flaps will provide treads for said rotor; and means for guiding said rotor upon rotation thereof.

2,449,312
BLOCK GREASES
George W. Murray, Pleasantville, and Chester D. Thayer, Jackson Heights, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application May 7, 1947, Serial No. 746,630
6 Claims. (Cl. 252—42)

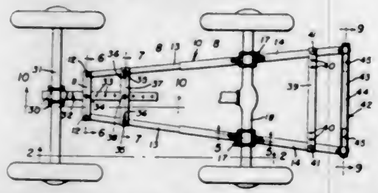
1. A block grease composition consisting substantially, by weight, of from about 10% to about 90% of mineral oil, from about 30% to about 10% of alkali metal soaps, and from about 1% to about 10% of monohydric alcohols of at least 14 carbon atoms, and having, in finished form, not over 0.5% of glycerine.

2,449,313
GROUND CONNECTING DEVICE
Alfred H. Naef, Chatham, N. J., assignor to The Daven Company, Newark, N. J., a corporation of New Jersey
Application January 11, 1946, Serial No. 640,612
1 Claim. (Cl. 174—6)



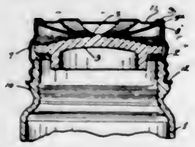
In a ground connection device for radio apparatus or the like, a rod composed of a plurality of detachably connected sections, said sections

having spiral threads on their outer surfaces, one of the said sections having one end tapered to a point and a coupling member formed upon its other end, another section having a coupling member on one of its ends for cooperation with the coupling member on the pointed section and having a handle coupling member on its other end, an operating handle having a coupling head thereon for operative engagement with the



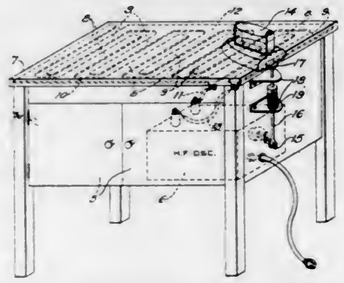
handle coupling member on the rod section, the coupling member on said pointed section being shaped to receive and operatively connect to the handle-carried coupling head whereby the pointed section may be used independently of the other section of the rod, a pressure plate carried by said rod, said pressure plate including an internally threaded sleeve for receiving the rod carried spiral threads, and laterally extending foot plates on said sleeve.

2,449,314
CIGAR LIGHTER
Warren I. Nissen, Newark, N. J.
Application May 15, 1946, Serial No. 669,876
2 Claims. (Cl. 67—7.1)



1. A pyrophoric lighter of the character described, including a casing which is elongated in horizontal cross section, said casing having therein a fuel chamber, a sparking wheel mounted in the space above the fuel chamber and disposed substantially centrally between the side edges of the casing, a wick tube mounted on top of the casing at one side of the sparking wheel, the top of the casing having a well located at the other side of the sparking wheel, a cap member overlying substantially the entire space above said casing, said cap member being pivotally mounted substantially concentric with the sparking wheel and having a top wall which arches substantially symmetrically over the top of the casing substantially from one side edge of the casing to the other side edge thereof when said cap member is in closed position, to provide opposed quadrants of the cap member which overlie respectively the wick tube and well, which quadrants join together at a point above the sparking wheel and afford opening movement of the cap member by manual engagement with the quadrant of the cap member which overlies the wick tube, said cap member being tiltable between the aforesaid closed position and an angularly displaced position wherein the quadrant of the cap member which overlies the wick tube is lifted upwardly therefrom to expose the latter and the quadrant thereof on the opposite side of its pivotal axis moves downwardly into said well, means being provided whereby movement of the cap member from closed position to such angularly displaced position produces rotation of said sparking wheel to project sparks therefrom toward the wick tube.

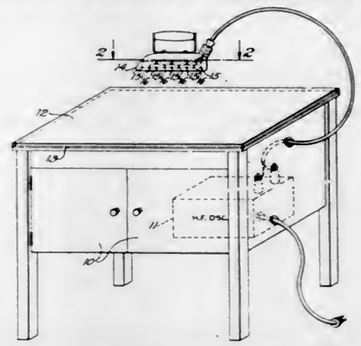
2,449,315
ADJUSTABLE DRAWBAR FOR TRAILER COUPLINGS
Albert Partin, Portales, N. Mex.
Application April 8, 1947, Serial No. 740,081
1 Claim. (Cl. 280—33.44)



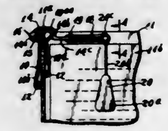
A draw bar for a trailer coupling comprising a tongue fixed to the front axle of a traction vehicle, a cross bar secured to the tongue in spaced relation to the front axle, for adjustment longitudinally thereof, a stabilizer bar secured for longitudinal adjustment to the tongue in spaced parallel relation to the cross bar, an extensible side bar pivoted adjacent its forward end to the cross bar adjacent each end thereof, each side bar being coupled through a pin and slot connection to the stabilizer bar, said side bars extending longitudinally of the traction vehicle in a plane below the rear axle thereof, means coupling each side bar to the rear axle of the traction vehicle, a spreader bar extending between the side bars near their rear ends, a vertical arm projecting upwardly from the rear end of each side bar, a tow bar mounted for vertical adjustment on the vertical arms and a trailer coupling fixed to the tow bar intermediate its ends.

2,449,316
CANNING JAR
Hans Pfleumer, New Brunswick, N. J.
Application December 22, 1945, Serial No. 636,669
2 Claims. (Cl. 215—56)

1. In combination, a jar having an opening, a cover for the jar, a gasket between the cover and the material of the jar defining the opening therein, and resilient means for maintaining the cover in place; said resilient means comprising an auxiliary member securable to the jar above the cover thereof, and a spring between the auxiliary member and the cover; said auxiliary member having an annular flange substantially parallel to the cover; said spring comprising a substantially convex sheet of spring material having a central portion engaging the upper surface of the cover, and having radiating legs engaging the under surface of said annular flange; said flange including means for regulating the pressure of the spring on the cover; said means comprising the arrangement of the flange to have a series of spaced stepped elements at different levels above the cover; the number of spaced elements at each step corresponding to the number of radiating legs of the convex sheet.



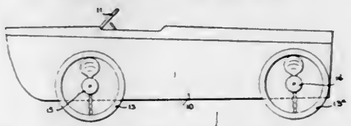
2,449,317
ELECTROSTATIC PRESSING APPARATUS
Earle C. Pitman, Red Bank, N. J., assignor to Compo Shoe Machinery Corporation, Boston, Mass., a corporation of Delaware
Application April 18, 1944, Serial No. 531,533
2 Claims. (Cl. 219—19)



1. Ironing apparatus comprising in combination, an oscillator, a cabinet housing said oscillator, said cabinet providing a support for the material to be ironed, a plurality of spaced electrodes embedded within said support, a pair of electrical conductors connecting the alternate of said electrodes together, means connecting said conductors to the output circuit of said oscillator, and a hand iron having a metallic lower surface providing a free electrode capacitively coupled to said electrodes when said iron is brought into ironing contact with the material placed upon said support.

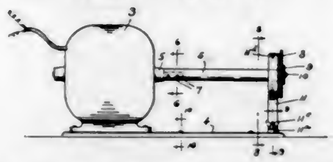
2,449,318
ELECTROSTATIC IRONING APPARATUS
Earle C. Pitman, Red Bank, N. J., and Ervin L. Crandell, Wellesley, Mass., assignors to Compo Shoe Machinery Corporation, Boston, Mass., a corporation of Delaware
Application April 18, 1944, Serial No. 531,532
4 Claims. (Cl. 219—19)

2. Ironing apparatus comprising in combination, a hand ironer having a body portion of nonmetallic material, a plurality of interlaced, spaced electrodes embedded within the body portion of said ironer, a pair of electrical conductors connecting alternate of said electrodes together, an oscillator, means connecting said conductors to said oscillator, a cabinet housing said oscillator, and means forming a portion of said cabinet providing a surface for supporting the material to be ironed and providing a free electrode capacitively coupled to said electrodes when said ironer is placed upon said material.



2,449,319
BOOKMARK
Emil Polak, Woodside, Long Island, N. Y.
Application December 11, 1945, Serial No. 634,177
2 Claims. (Cl. 116—119)

1. A book mark comprising a U-shaped member providing opposing material gripping jaws having terminals spaced longitudinally from each other and provided with curled ends adapted to engage a book part, said U-shaped member having a loop on the bend part thereof, hinge lugs secured to said member inwardly of said loop, a lever pivoted to said lugs and provided with a loop engaging the loop of the member to close said jaws against a part placed between the same, and a page locating book mark pivoted on the outer end of the lever, the U-shaped member being adapted to grip the flexible hinge of a book.

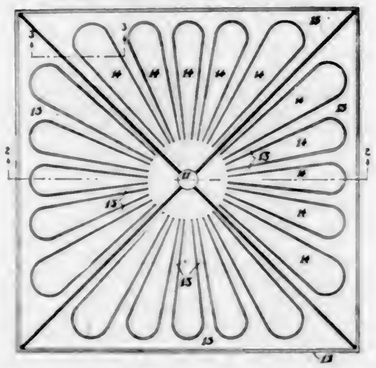


2,449,320
LAND AND WATER VEHICLE
Gaetano Raimondi, New York, N. Y.
Application November 30, 1944, Serial No. 565,865
8 Claims. (Cl. 115—1)

1. An amphibian vehicle for use on both land and in the water comprising a hull, two front and two rear wheels secured to said hull, each having a hub, a tire, spokes securing said tire to said hub, and a paddle journalled to said hub and tire and disposed between two adjacent spokes, and separate driving mechanisms for rotating each of said wheels and its paddle, and separate driving mechanisms for rotating each of said paddles about its axis perpendicular to the axis of its wheel, including gears in the hub of its said wheel

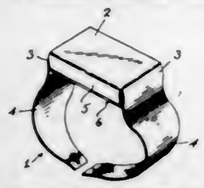
and a stationary lantern gear with which said gears mesh, and a clutch for moving each of said lantern gears out of mesh with its correlated hub gears.

2,449,321
SHOE SHANK GROOVING MACHINE
Andrew Rayon, Sulphur, La.
Application January 23, 1946, Serial No. 642,824
2 Claims. (Cl. 12—17)



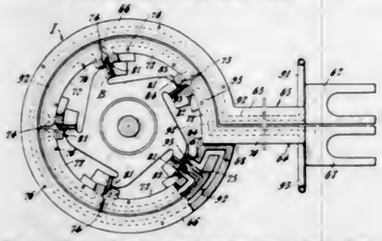
1. A shoe repair machine comprising a motor driven disc type cutter, a supporting base for the motor of the cutter, said cutter being adapted for cutting a transverse groove in a shoe shank held against the cutter, and a gauge alongside said cutter curving concentrically thereof and in an arc of relatively smaller radius than that of said cutter for gaging the depth of the groove to be cut.

2,449,322
COMPOUND FOR FISHING BAIT
Isaac F. Richardson, Gallatin, Tenn.
No Drawing. Application March 27, 1947, Serial No. 737,729
4 Claims. (Cl. 99—3)



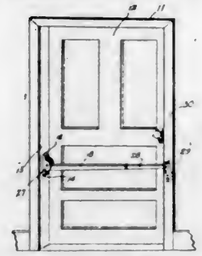
1. A compound for fishing bait consisting of oil of anise, pine tar, methyl salicylate, mineral oil and motor oil.

2,449,323
SHEET-METAL RECEPTOR
Frank H. Richterkessing, Louisville, Ky., assignor to Porcelain Metals Corporation of Kentucky, Louisville, Ky.
Continuation of application Serial No. 518,480, January 14, 1944. This application January 13, 1945, Serial No. 572,656
6 Claims. (Cl. 4—146)



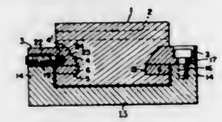
1. A sheet-metal floor for a shower-bath cabinet having a plurality of depressions formed therein, and a vitreous-enamel coating on the upper surface of the said floor; the outer surface of the vitreous-enamel coating on the upper surface of the depressions having a smooth glazed-finish and the outer surface of the vitreous-enamel coating on the remaining portion of the floor having a finish dull and rough relative to the said glazed finish.

2,449,324
WRIST-ATTACHED ARTICLE CARRIER
Clifford C. Robinson, Sioux City, Iowa
Application April 16, 1945, Serial No. 588,435
1 Claim. (Cl. 224—28)



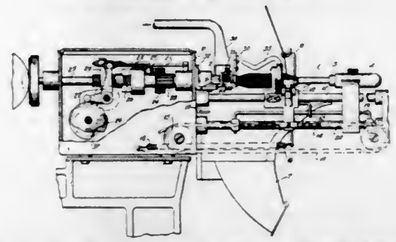
An article carrier to be worn on the wrist comprising a bracelet of spring metal and clip-like form including an integral crown cover portion of inverted box form, and a receptacle separate from the bracelet and fitting upwardly in said crown, said crown cover portion having ends and sides frictionally gripping said receptacle the ends being formed by said bracelet, said receptacle depending below the sides of the crown to rest on the wrist and prevent said sides from cutting the wrist.

2,449,325
INDUCTION HEATING OF ROTATABLE BLADE ASSEMBLIES AND THE LIKE
Wallace C. Rudd, Larchmont, and Robert J. Stanton, Brooklyn, N. Y., assignors to Induction Heating Corporation, New York, N. Y., a corporation of New York
Application June 20, 1945, Serial No. 600,544
4 Claims. (Cl. 219—13)



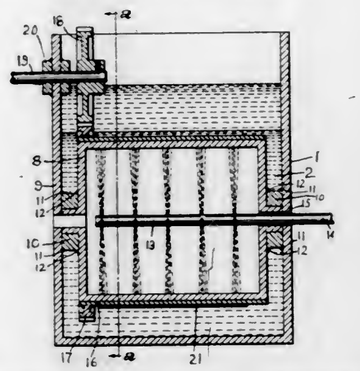
1. Induction heating apparatus for heating work having the general form of helical blades as mounted on a rotor assembly, said apparatus comprising a conductor having the respective end portions thereof adapted for connection to two closely spaced terminals of a source of high frequency current, said conductor being constructed and arranged to form a loop portion extending from one terminal around in a loop formation back to a point near such terminal and there joining another loop portion which is closely spaced with respect to said first-named loop portion and extends back around in a like loop formation to the other terminal, a plurality of gaps being formed at spaced points along said conductor, and an elongated loop-like inductor portion physically connected to bridge each such gap and extending angularly with respect to the general plane of said conductor loops, a support and guide means for such rotor-blade assemblies and the like, and means to advance said support axially of the assemblies while the latter are gradually rotated by said guide means to an extent corresponding to the pitch of the helical blade formation, each elongated loop-like inductor including portions shaped and positioned to form a channel-like path containing a localized high frequency field through which the blade formation passes while being thus advanced.

2,449,326
SAFETY GUARDRAIL
Frederick Schaefer, North Plainfield, N. J.
Application February 28, 1947, Serial No. 731,649
4 Claims. (Cl. 20—71)



1. In a doorway including a door mounted for opening and closing movement with respect to said doorway, a guard device arranged within said doorway adjacent to and spaced from said door and mounted for movement into and out of obstructing position with respect to said doorway, said device comprising a bracket member carried by a side-face of said doorway, an arm mounted in said bracket for swinging movement about a horizontal axis, a transverse slidable shaft carried by said bracket and actuable upon closing movement of said door, a latch means on said arm and on said shaft engaging each other when the arm is in out-of-obstructing position to thereby lock the arm in the latter position and releasable from each other upon slidable movement of said shaft in response to closing movement of said door to thereby cause the arm to swing to its obstructing position, and resilient means operatively connected to said shaft and said arm for normally biasing said latch means into engagement with each other.

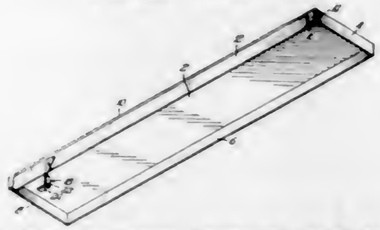
2,449,327
SLIDE ASSEMBLY FOR MACHINE TOOLS
Michael J. Schlitters, Grosse Pointe Park, Mich.
Application August 11, 1944, Serial No. 549,095
8 Claims. (Cl. 308—3)



1. In a slide assembly for machine tools, the combination with a slide, a support for the slide, a pair of guide rails on the support engaged with opposite sides of the slide, at least one of such rails being adjustable on the support to and from the slide, and means for releasably clamping the adjustable rail to the support, of a feed nut housed within the adjustable guide rail, means for anchoring the feed nut to the support, an adjusting screw substantially transverse to the direction of travel of the slide and operatively engaging the feed nut, the adjustable rail being apertured to give access to said screw, and means connecting the adjustable rail to the screw to advance with the screw toward the slide.

2,449,328
AUTOMATIC WINDER
Walter Schweiter, Horgen, Switzerland, assignor to Maschinenfabrik Schweiter A. G., a corporation of Switzerland
Application July 13, 1940, Serial No. 345,255
In Switzerland August 25, 1939
8 Claims. (Cl. 242—19)

1. In automatic bobbin winders of the kind in which the bobbins are fed to and discharged from the winding position and in which the yarn is initially fixed to a bobbin by being pinched between the end thereof and the winding head and then wound on the bobbin by means of a thread guide which travels lengthwise of the bobbin and in which the bobbin has a shoulder over which the yarn extends from the point of pinching to the initially wound yarn mass, the improvement which consists in the combination with the winding head, the mechanism causing the yarn to be pinched against the head by a bobbin, and the thread guide mechanism, of a movably-mounted knife and means moving with said thread guide mechanism for causing movement of the knife to a position at one side of said shoulder but not in contact with the bobbin and in the path of a portion of the yarn that is clear of the bobbin, whereby the rotation of the bobbin causes such yarn to strike the knife and be cut thereby.



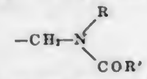
2,449,329
APPARATUS FOR PLATING SHEET METAL
Harry Sebell, Wilmington, Mass., assignor to Bell Products Corporation, Boston, Mass., a corporation of Massachusetts
Application February 13, 1946, Serial No. 647,236
2 Claims. (Cl. 91—12.6)

1. A machine for coating metal comprising a pot for containing molten tin, a stationary drum submerged in the mass of molten tin, means for heating said drum, a sleeve encircling the drum and with which the sheet metal to be plated has

contact, and means to turn the sleeve on the drum, thereby to assist in feeding the sheet metal through said tin bath.

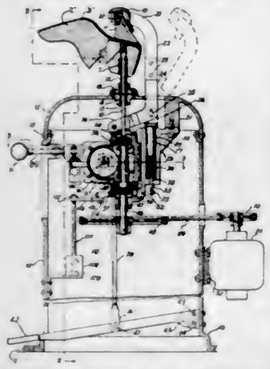
2,449,330
ROOF STRUCTURE
Alfred Shaw, Chicago, Ill.
Application February 15, 1946, Serial No. 647,754
3 Claims. (Cl. 108—13)

1. A roof structure, comprising panel sections of aluminum or a similar light metal or alloy, each section being a long, rectangular, flat surface with narrow vertical sides, one of the longer sides having a flange extending from said side, said flange doubling back parallel to the side of which it is an extension and forming a narrow channel, between said flange and said side, wide enough to accommodate the unflanged side of a similar section, said flange extending upwardly to a line immediately below the plane of the aforementioned flat surface, said flange being slightly shorter than the side from which it extends, a holding means secured to the said panel section and forming an integral part thereof, extending downwardly in the direction of the afore-mentioned sides and parallel to them, and of sufficient length to securely clamp the said section and the upper end of an identical section, overlapped by and directly beneath the bottom end of the first-mentioned section, to the upper flange of a roof supporting member.



2,449,331
SECTIONAL POST LOCK FOR LOOSE-LEAF BINDERS
Walter Shoda, St. Albans, N. Y.
Application July 20, 1946, Serial No. 685,257
3 Claims. (Cl. 129—12)

3. In a loose leaf binder, upper and lower clamps, posts extending from the lower clamp and passing through said upper clamp, a flexible strip in said upper clamp, perforated wedge plates having edges loosely connected to the opposite ends of said flexible strip, said post also passing through the perforations of said wedge plates, means for positioning said plates obliquely whereby the posts are frictionally engaged by the diametrically opposite edges of the perforations to lock the clamps together, said strip being normally in flexed position to retain the plates in oblique locking position, adjustable means for flexing said strip to move the plates from oblique locking position to free said posts, said strip flexing means comprising a screw and a threaded collar on said strip through which the screw passes, said upper clamp having an opening formed in the bottom thereof, said screw having a reduced lower end portion disposed within said opening and freely rotatable therein, means on said screw cooperating with said upper clamp to prevent detachment of said screw from said upper clamp, said wedge plate positioning means comprising a lip on the edge of each of said wedge plates opposite the edges of which are loosely connected to the ends of said flexible strip, said flexible strip being ridged on opposite sides of said flexing means to provide fulcrums whereby the opposite outer ends of said flexible strip will move vertically to move said wedge plates.



2,449,332
S-(AMIDOMETHYL)-DIMERCAPTO-PROPANOLS
Frank K. Signaigo, Brandywine Hundred, Del., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
No Drawing. Application March 6, 1945, Serial No. 581,322
4 Claims. (Cl. 260—561)

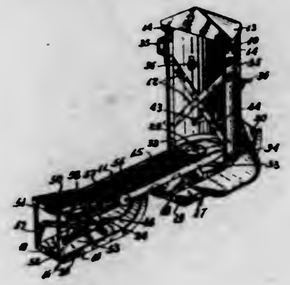
1. A stable, water soluble anti-vesicant compound useful as an anti-vesicant and in arsenic and cadmium therapy consisting of a derivative of 2,3-dimercaptopropanol in which at least one mercapto hydrogen is replaced by the group.

wherein R is a radical selected from the group consisting of hydrogen and a hydrocarbon radical, and R' is a hydrocarbon radical.

2,449,333
APPARATUS FOR ATTACHING HEELS TO SHOES
Edward F. Small, Newton, Mass., assignor to Compo Shoe Machinery Corporation, Boston, Mass., a corporation of Delaware
Application September 7, 1946, Serial No. 695,431
8 Claims. (Cl. 12—42)

1. A machine for driving wood screws, comprising work holding means, a spindle reciprocable towards a work piece held by said holding means, means for securing a wood screw to the end of said spindle, means for rotating said spindle in a screw driving direction, means for reciprocating said spindle towards said work piece at a rate which is less per revolution of said spindle than the lead of the thread of the wood screw secured thereto until said wood screw has bored a lead hole into said work piece, means for allowing said spindle to reciprocate at a rate corresponding to the lead of the thread of said wood screw until said wood screw is driven into said work piece to the desired depth, and means for releasing said wood screw from said spindle, and for returning said spindle to its original position.

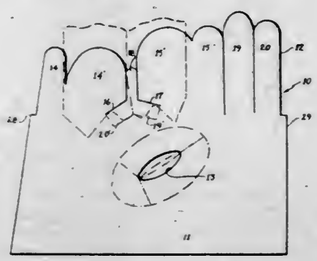
2,449,334
METHOD OF PACKAGING
Elmer Lovell Smith, Longmeadow, Mass., assignor to Package Machinery Company, Springfield, Mass., a corporation of Massachusetts
Application May 4, 1944, Serial No. 534,009
1 Claim. (Cl. 93—2)



A method of wrapping an article which comprises printing upon a rectangular wrapper a rectangular band of pressure sensitive adhesive, said band having a length slightly in excess of the length of the article and a width slightly in excess of twice the width of the article and having its width asymmetrically disposed on the sheet to produce a wide margin at one side of the sheet, folding the wrapper over the article to bring the folded-over portions of the band into superposed registry, with top and bottom portions of the wrapper overlapping beyond the front of the article and with the wide margin at the bottom extending beyond the narrower margin at the top to produce a final folding flap sufficient to substantially cover the top of the finished package, pressing top end portions of the wrapper downwardly against flattened bottom end portions thereof to bring the registered bands at the ends of the wrapper into adherence closely adjacent the ends of the article, folding each rear corner of the wrapper down upon its respective flattened end portion adjacent opposite ends of the article, folding over said flattened end portions of the wrapper upon the top of the article, pressing the front end top portion of the wrapper down against the final folding flap at the bottom to bring the registered bands of said portions into adherence closely adjacent the front of the article, folding the final folding flap of said wrapper over the top of the package to substantially cover the same, and adhesively securing said finally folded flap in position to complete the package.

2,449,335
HYDRAULIC PRESSURE DEVICE AND ACTUATING FLUID THEREFOR
Frank J. Sowa, Cranford, N. J.
No Drawing. Application October 28, 1942, Serial No. 463,684
5 Claims. (Cl. 252—78)

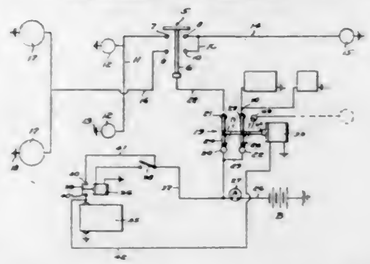
1. A hydraulic pressure device comprising the combination of a fluid chamber and an actuating fluid in said chamber consisting essentially of a silicone, the organic constituents of which consist essentially of alkyl radicals attached directly to the silicon atoms.



2,449,336
SCOOTER FOR WINTER SPORTS
Ferdinand Spitzwieser, New York, N. Y.
Substituted for application Serial No. 510,104, November 13, 1943. This application September 23, 1947, Serial No. 775,671
13 Claims. (Cl. 280—16)

1. In a scooter having a vertical semi-circular casing positioned at the front of a platform, runners supporting said platform and including a turnably mounted front runner for steering the scooter and pivotally mounted for riding over obstacles with greater ease, a disc supporting said semi-circular casing and being turnably mounted on the front of said platform coaxially of said turnably mounted runner, a trunnion

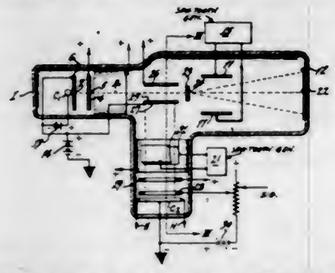
mounted on said disc and connected with the rear side portions of said semi-circular casing for pivotally supporting said casing so that it may pivot rearwards, means for latching said casing in its vertical position on said disc, and resilient means between said disc and said front runner for urging said front runner in a normal horizontal position relative to said disc.



2,449,337
WORK GLOVES
Robert Steinberg, Great Neck, N. Y.
Application November 26, 1947, Serial No. 788,165
14 Claims. (Cl. 2—161)

1. A glove of the character described, comprising a main blank consisting of a lower section and an upper section, said lower section adapted to be folded over to form the front and back of the glove and being of greater width than said upper section to form a lip on at least one side thereof adapted to overlap and be cemented to the opposed edge of the said lower section to form the longitudinal seam of the glove, said lower section having an approximately oval shaped thumb opening formed therein at an angle to its lower edge, said upper section having portions shaped to form the complete little and index fingers when folded on themselves and portions forming parts of the middle and third fingers and a tab formed integrally with the upper edge of said lower section and adapted to be rearwardly bent and cemented in position intermediate said middle and third fingers to secure the two sides

of the lower section to one another, the portions forming the little finger when folded over on themselves being disposed on an edge of the said blank whereby the said longitudinal seam is disposed at the back of the glove when the said little finger is formed; inserts forming complementary parts of the third and middle fingers cemented by the areas adjacent their lower edges to the area adjacent the upper edge of the said lower section one to each side of said tab; and a thumb member inserted through said thumb opening, said thumb member formed of a blank having an approximately oval shaped upper portion folded to have its opposed edge portions connected to one another, and an oppositely curved lower flange section extending on each side of said upper portion, said flange having straight edges connecting its curved edge to the sides of the said upper portion and a slit formed in its edge centrally thereof, whereby said flange may be bent to have its straight edges juxtaposed to thereby set the flange at substantially right angles to the said thumb and to have its upper surface cemented to the inner surface of the edge of the said thumb opening substantially along their entire contacting areas.

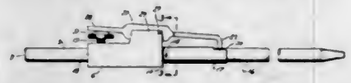


2,449,338
CIRCUIT CONTROL MEANS FOR MOTOR VEHICLES
Everett E. Summersett, Hollywood, Fla.
Application January 24, 1948, Serial No. 4,113
3 Claims. (Cl. 315—83)

1. Control means for motor vehicle electrical circuits including a source of electrical energy and a starter, vehicle headlights, vehicle parking lights and vehicle tail light, circuits for conducting electrical energy to the several lights, a switch for controlling the circuits, a circuit for conducting electrical energy to the starter, a solenoid for controlling the flow of current to the starter, a source of energy for the solenoid, a switch for controlling the flow of current to the solenoid, a circuit breaker positioned in the circuits to the several lights, a solenoid for actuating the circuit breaker, said last named solenoid energized for breaking the light circuits when the starter is actuated, said solenoids automatically assuming their normal position when the starter is deenergized.

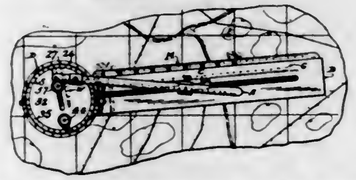
2,449,339
CATHODE-RAY TUBE
George C. Sziklai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 13, 1945, Serial No. 628,296
5 Claims. (Cl. 315—13)

1. In cathode ray tubes, an evacuated envelope containing a phosphor screen, a cathode, an anode, a grid, said anode and grid having slits adapted to form a flat beam from said cathode of thickness and width substantially equal respectively to the height of a picture element and the length of the picture line of said screen, deflecting plates positioned on opposite sides of said beam, one of said plates being of poor electrical conductivity, a mesh screen adjacent one side of



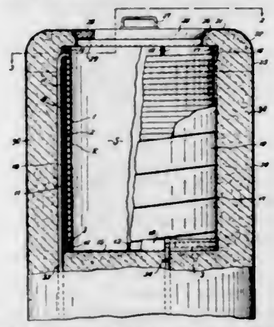
the plate of poor conductivity, means for scanning the beam at frame frequency across said phosphor screen, a second cathode and means for forming and scanning a beam from the second-mentioned cathode across said mesh screen at line frequency.

2,449,340
VITAMIN-B COMPLEX CONCENTRATE
Fred W. Tanner, Jr., and James M. Van Lanen, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 24, 1946, Serial No. 699,074
2 Claims. (Cl. 99—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



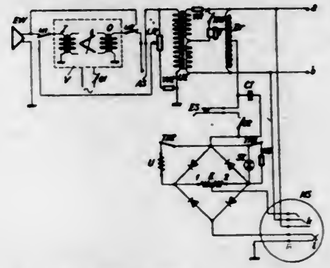
1. A method for producing a feed supplement rich in vitamin B-complex, comprising fermenting an aqueous fermentation medium under conditions of agitation and aeration by fungi of the *Penicillium notatum-chrysogenum* group, and recovering the feed supplement from the fermentation mash by removing the bulk of the water therefrom.

2,449,341
CARBON HOLDER
Robert L. Tanson, Oakland, Calif., assignor of one-half to Elmer C. Hanks
Application March 13, 1945, Serial No. 582,519
2 Claims. (Cl. 176—119)



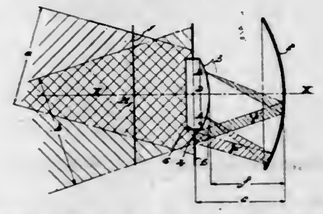
1. A holder for a rod-like electrode comprising an elongated metallic body having a bore extending entirely therethrough and being of a diameter substantially corresponding to that of said electrode, a rod of substantially the same diameter of said electrode slidable longitudinally in said bore and having an end extending from said body, a sleeve arranged for positioning with an end against said body and having a bore of substantially the same diameter as the bore of said body and receiving said rod end in a portion thereof, means securing said rod and sleeve with the rod positioned in said sleeve as aforesaid, said sleeve receiving in another portion of its bore an end of said electrode and being provided with a slot in said portion exposing the electrode in the bore, a lever pivotally connected to said body having an arm with the free end thereof positioned to register with said slot when said sleeve is against said body as aforesaid and to engage the electrode when in the sleeve, means engaging said lever to releasably hold said arm in engagement with said electrode as aforesaid, and means for retaining said rod against longitudinal displacement in said body bore.

2,449,342
PLOTTING AIRCRAFT NAVIGATION COMPUTER
Gerard E. Tardif, Quebec, Quebec, Canada
Application September 9, 1943, Serial No. 501,648
4 Claims. (Cl. 235—61)



1. A navigational computer of the character described, comprising a wind disc, a base pivoted at one end to the center of said disc, said disc being rotatable with respect to said base, means on the disc for locating same on a suitable map, an arm pivoted at one end to the disc and slidably connected at the other end to a bracket slidable longitudinally on the base, and a pantograph connected at one end to the base and at the other to the slidable bracket, said pantograph having cross bars extending as pointers on the edge of base, whereby the track, point of departure and location of a flying craft after a given time at a given speed will be indicated directly on the map.

2,449,343
REFRIGERATION APPARATUS
Viggo V. Torbensen, Cleveland, Ohio, assignor to Gertrude S. Torbensen, Cleveland, Ohio
Application February 12, 1945, Serial No. 577,545
7 Claims. (Cl. 62—99)



1. In refrigeration apparatus, an evaporator including a wall made of efficient heat conducting material and arranged with one of its sides exposed to the refrigerating space of the apparatus, a device disposed in such relation to the opposite side of said wall as to enclose therewith a refrigerant passage, said device comprising adjacent trough-like parts each of which has one of its edges contacting said wall and its opposite edge engaging the longitudinal medial portion of the adjacent part, a reinforcing member closely embracing said device in firm contact with the side thereof remote from said wall, and means providing a refrigerant circuit including said passage.

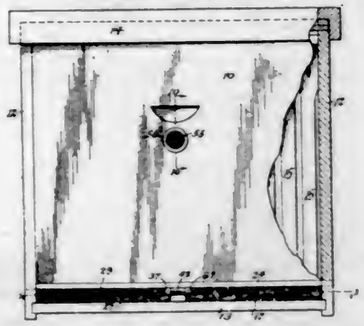
2,449,344
DEVICE FOR CONFERENCE CALLS IN SUBSCRIBERS' DEVICES FOR LOUD AND FAINTLY AUDIBLE TRAFFIC
Otto Tschumi, Soleure, Switzerland, assignor to Autophon Aktiengesellschaft, Soleure, Switzerland, a joint-stock company of Switzerland
Application May 12, 1944, Serial No. 535,298
In Switzerland December 10, 1942
2 Claims. (Cl. 179—18)

1. In a telephone system for loud and faintly audible communication, subscribers stations each including an electro-acoustic transformer serving as both a microphone and a loud-speaker, a line circuit, connections between said circuit and said electro-acoustic transformer, circuit control means operable to change said connections to render the electro-acoustic transformer operative as either a microphone or loud-speaker, means responsive to an incoming signal to operate the circuit control means and render the electro-acoustic transformer operative as a loud-speaker, a normally inoperative receiver for producing faintly audible signals, and switch means for operably connecting said receiver in said circuit and simultaneously rendering said signal responsive means inoperative whereupon said electro-acoustic transformer is rendered operative as a microphone by said circuit control means.

2,449,345
SCHMIDT TYPE OPTICAL SYSTEM WITH OPAQUE DIAPHRAGM
Pieter Martinus van Alphen, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 18, 1946, Serial No. 663,142
In the Netherlands July 12, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 12, 1961
4 Claims. (Cl. 88—57)

1. A Schmidt type optical system comprising a concave mirror, a correction element, an ele-

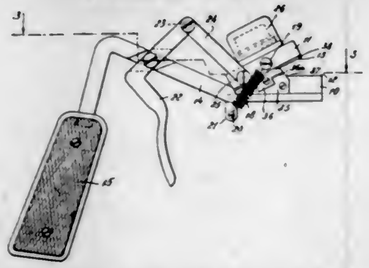
ment interposed between said mirror and said correction element and having a surface substantially coincident with the focal surface of said system, and an opaque diaphragm having an aperture for the transmission of light therethrough and mounted at a distance along the optical axis from said mirror between three-fourths and one and three-fourths times the focal distance of said mirror and interposed between said correcting element and said mirror.



2,449,346
SILICATE PAINTS
Wesley G. Vannoy, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 5, 1945, Serial No. 571,534
4 Claims. (Cl. 106—84)

1. A paint composition comprising a metal amino sulfate from the group consisting of copper, cadmium, and zinc amino sulfates, titanium oxide in powder form, finely divided mica, potassium silicate and water.

2,449,347
HYDROGEN BROMIDE-CATALYZED OXIDATION OF ORGANIC COMPOUNDS
William E. Vaughan and Frederick F. Rust, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 11, 1944, Serial No. 558,288
7 Claims. (Cl. 260—610)

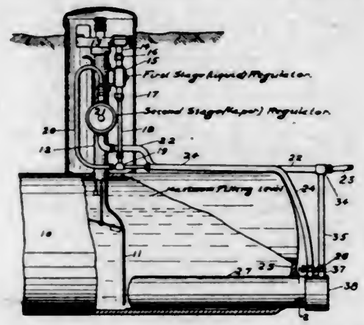


6. In a process for the controlled oxidation of saturated aliphatic hydrocarbons, the steps of subjecting vapors of a saturated aliphatic hydrocarbon to the action of oxygen, in the presence of hydrogen bromide and at a temperature of between about 100° C. and that at which spontaneous combustion will occur, and effecting said reaction in free space in a reaction vessel having a volume to surface ratio not less than 0.25 when all of the linear dimensions of the vessel are expressed in inches.

2,449,348
BEEHIVE
Robert H. Volgenau, Buffalo, and John M. Hooe, Ogdensburg, N. Y.
Application August 21, 1945, Serial No. 611,740
11 Claims. (Cl. 6—4)

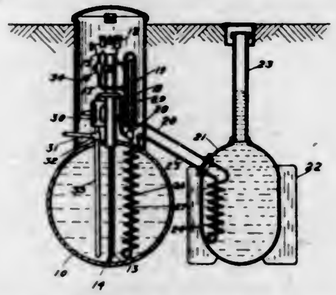
1. A beehive comprising a housing having an opening for the passage of bees and means for screening said opening including a frame removably arranged in said opening and having a strip bent to form lower horizontal parts and upwardly projecting loops which alternate with said lower parts, retaining pins guided on said loops and having pointed outer ends, spring means for moving said pins outwardly and engaging their points with the opposite ends of said opening, handles arranged on the inner ends of said pins for manually moving the points thereof out of engagement from the housing, and a screen mounted on said frame and extending across said opening.

2,449,349
DEVICE FOR CONNECTING YARN ENDS
John A. Waugh and Rolf Wallin, Charlottesville, Va., assignors to Wauregan Mills, Incorporated, Wauregan, Conn., a corporation of Connecticut
Application July 15, 1947, Serial No. 760,986
10 Claims. (Cl. 57—22)



1. A strand connecting device, which comprises a stationary jaw and a movable jaw having opposed faces, one of the jaws having a sloping surface at its inner end meeting the face of said jaw along a line transverse to the jaw and the stationary jaw having a stop at its inner end, spring means connecting the jaws and tending to hold the movable jaw against the stop with said sloping surface on one jaw engaging the face of the other jaw and the outer ends of the jaws spread apart, means connecting the jaws near their inner ends and operable to move the movable jaw away from the stop, said jaw, in the initial part of such movement, rocking on said line and then moving with its face parallel to that of the stationary jaw, a vessel for adhesive mounted on one jaw and having an outlet at the face of the jaw and a valve controlling the outlet, and means on the other jaw for opening the valve during the movement of the movable jaw.

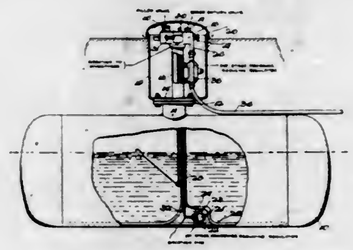
2,449,350
LIQUEFIED GAS DISPENSING SYSTEM
Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, San Antonio, Tex., a corporation of Texas
Application October 2, 1944, Serial No. 556,832
10 Claims. (Cl. 62—1)



1. In combination with a liquefied petroleum gas generating and dispensing system of the type wherein liquid fuel is delivered from the bottom of the tank through a first-stage pressure reducing regulator and partially vaporized, a heat exchanging casing projecting into the bottom portion of the tank and submerged in the liquid fuel; a vaporizer for the residual liquid delivered from the first-stage pressure reducing regulator removably mounted in said casing; conduit means connected to deliver the residual liquid to said vaporizer and return the vapor therefrom; and a second-stage pressure reducing regulator communicating with said conduit means and through

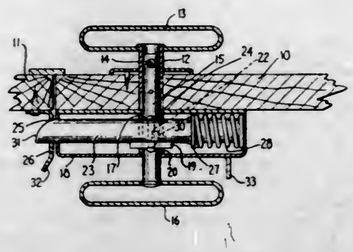
which the vapor from the first-stage regulator and the vapor generated in said vaporizer are

delivered; and a service pipe connected to the second-stage regulator.



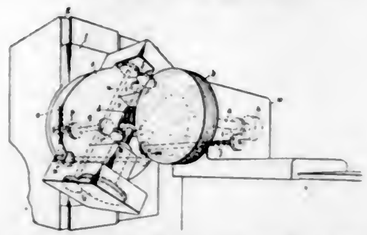
2,449,351
METHOD OF AND APPARATUS FOR DISPENSING LIQUEFIED PETROLEUM GAS
Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, San Antonio, Tex., a corporation of Texas
Application February 8, 1945, Serial No. 576,735
9 Claims. (Cl. 62—1)

1. That method of generating and dispensing gas which is characterized by storing a quantity of liquefied petroleum gas under its own vapor pressure; discharging liquid as needed by virtue of such pressure; subjecting the discharged liquid to a first stage pressure reduction, thereby causing a portion thereof to flash into vapor; conducting the flashed vapor away from the residual liquid; conducting the residual liquid to a separate vaporizer and independently vaporizing it; and then combining the flashed vapor and the vapor of the residual liquid and subjecting them to a second stage pressure reduction ready for use in gas consuming appliances.



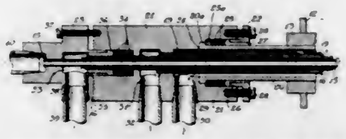
2,449,352
LIQUEFIED GAS STORAGE AND DISPENSING SYSTEM
Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, San Antonio, Tex., a corporation of Texas
Application November 27, 1945, Serial No. 631,132
2 Claims. (Cl. 62—1)

1. In a liquefied petroleum gas dispensing system for delivering gas of substantially uniform B. t. u. content from a mixture of liquefied petroleum gases, a pressure storage container adapted to be charged with the liquid; a large conduit connected to the upper portion of the container and having a predetermined size of opening therethrough into the container; a standpipe section connected to the upper end of the large conduit carrying a valved dispensing fitting; a fuel delivering conduit connected to the fitting and extending downwardly through the standpipe and conduit into the bottom portion of the container, a first stage pressure reducing regulator having its outlet connected to the fuel delivering conduit



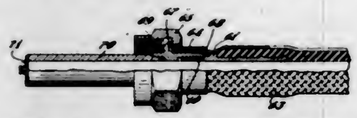
and disposed in the bottom portion of the container and arranged to be submerged in the liquid fuel to absorb heat therefrom; and a vaporizing coil made of flexible pipe connected to the fuel delivering conduit at the regulator and positioned in the bottom portion of the container so that residual liquid will drain therein from the fuel delivering conduit and the regulator, the first stage pressure reducing regulator being of such size and so arranged in relation to the size of opening through the large conduit connected to the upper portion of the container that the assembly may be removed from the container through said large conduit.

2,449,353
DOOR LATCH
Robert E. Whitmore, Keokuk, Iowa
Application April 14, 1945, Serial No. 588,328
2 Claims. (Cl. 292—173)



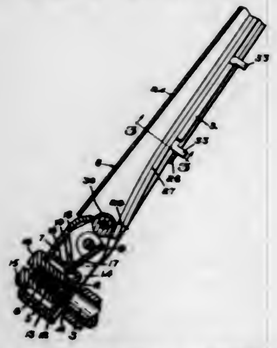
1. A door latch including a bolt, a bolt operating shaft disposed transversely to said bolt, a lever secured to said shaft, a longitudinally extending slot in the outer terminal of said lever, a pin secured to said bolt and slidably secured into said slot, a stop lug secured to said lever for engagement with said bolt to limit oscillation of said lever and resilient means biasing said bolt into the latching position.

2,449,354
MACHINE FOR GRINDING TOOTHED GEAR WHEELS AND THE LIKE
Axel Charles Wickman, Coventry, England
Application March 14, 1946, Serial No. 654,259
In Great Britain March 30, 1945
1 Claim. (Cl. 51—71)



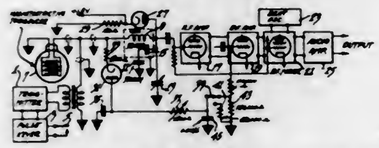
A machine for grinding the teeth of helically toothed gear wheels or other analogous work pieces by a grinding wheel having an operative peripheral surface of helical form, and comprising the combination of a grinding wheel spindle, a work spindle, an angularly adjustable support on which the work spindle is mounted and by which the work spindle can be set at such an angle in relation to the axis of the grinding wheel that the work piece surfaces to be ground are substantially in alinement with the operative surfaces of the grinding wheel helix, gearing for interconnecting the two spindles in constant speed relationship so that relative rotation thereof occurs at the rate which would result if the work piece derived its rotation from the grinding wheel, a slide carrying the angularly adjustable work spindle support, and a fixed guide along which the slide is movable for effecting translational movements of the work spindle support relatively to the grinding wheel spindle in a direction parallel with the work piece surfaces to be ground.

2,449,355
INTERNAL TWO-ZONE HEAT CONTROL FOR PLASTICS EXTRUDERS
Ralph M. Wiley, Midland, and Edward V. Dettmer, Bay City, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application July 28, 1947, Serial No. 764,134
1 Claim. (Cl. 18—12)



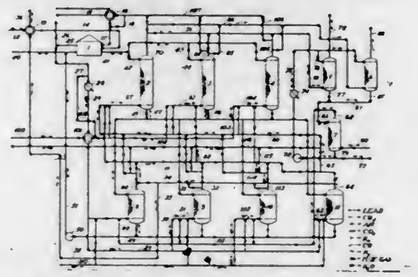
The combination with a hollow rotatable feed screw of an extruder for organic thermoplastic materials, of a nest of four concentric pipes extending into and coaxial with the said screw, the innermost pipe extending to the forward end of the screw, the next larger pipe extending to the desired line of division between separately controlled temperature zones within the screw and being there attached to and rotatable with the screw to form a partition between the said zones, the next larger pipe extending to the forward end of the rearwardly disposed heating zone, and the largest pipe opening into and being attached to and rotatable with the butt of the screw, all of said pipes projecting rearwardly from and coaxial with the screw and into the central bore of a non-rotatable block aligned with and displaced from the rear of the screw and having a stuffing box at each end thereof; the largest pipe terminating at the seat of the stuffing box nearest the screw, being rotatably secured therein and in communication with a radially bored port in said block; the next smaller pipe projecting further into and being secured to the block and in communication with a radially bored port in said block; the next smaller pipe projecting through the rear of the block into the gland of the rear stuffing box, being rotatable therein and being in communication with a radially bored port in said gland; and, the innermost pipe extending through said rear gland, being attached thereto, and in communication with a port at the rear face of said gland.

2,449,356
METHOD OF MAKING SHIELDED IGNITION LEADS
Howard M. Wilkoff, New York, N. Y.
Original application December 16, 1942, Serial No. 469,185. Divided and this application September 26, 1944, Serial No. 555,810
7 Claims. (Cl. 29—155.5)



1. Method of making ignition leads, said method comprising as steps providing a length of flexible, synthetic resin tubing of an internal diameter slightly less than the diameter of the ignition lead conductor which it is intended to house, inserting one end of a rigid connector into each end of the tube, drawing a length of flexible tubular armor over the tube, introducing a flexible conductor into the tube, wrapping each end of the armor tube with tape, cutting off the armor tube to final length by incisions passing through the taped portions of the armor tube, arranging a swedging ring over each end portion of the armor tube, and subjecting the swedging rings to pressure thereby to compress the armor tube and the resin tubing firmly about the end portion of the rigid connector.

2,449,357
WINDSHIELD WIPER
Louis Zalger, Swampscott, Mass.
Application September 8, 1944, Serial No. 553,146
4 Claims. (Cl. 287—53)

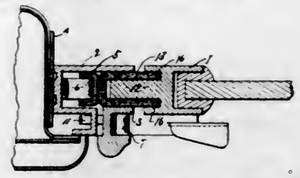


4. Means for connecting a windshield wiper arm having an inner channel section provided with a hood portion to an operating shaft, said means comprising a bushing element interlocked with said shaft and provided with a lateral opening and enclosed within said hood portion, a connecting member located between the sides of said inner channel arm section and having a portion engaged in the lateral opening of the bushing, and means for retaining said connecting member in such position, whereby the turning movement of the bushing is communicated to the connecting member and thus to the wiper arm through the portion of the connecting member which is engaged in said lateral opening.

2,449,358
ECHO SOUNDING SYSTEM WITH SENSITIVITY CONTROL
Amedeo D. Zappacosta, Havertown, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application February 23, 1946, Serial No. 649,604
6 Claims. (Cl. 177—386)

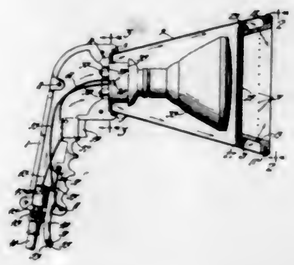
1. In an underwater signalling system having a common electromechanical transducer for transmission and reception, a receiver having an input circuit coupled to said transducer, a pulse transmitter coupled to said transducer, rectifier means coupled to said transmitter and in circuit with said receiver for reducing the sensitivity thereof during periods of transmission, said means also effectively short-circuiting said receiver input circuit in response to applied signalling voltages exceeding a predetermined minimum.

2,449,359
MANUFACTURE OF CARBON MONOXIDE AND HYDROGEN FROM METHANE
Armand J. Abrams, Manuel H. Gorin, and Charles Ovid Baker, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application January 25, 1945, Serial No. 574,612
15 Claims. (Cl. 48—196)



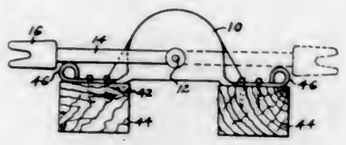
13. In a process for the production of hydrogen and carbon monoxide from a methane containing gas and carbon dioxide wherein said methane is converted to hydrogen and carbon and said carbon is converted to carbon monoxide by interaction with carbon dioxide and wherein the endothermic heat requirement for the conversion of the methane to hydrogen and carbon and said carbon and carbon dioxide to carbon monoxide is furnished by circulating a molten mass of metal at temperatures above 1800° F. in direct countercurrent contact with said methane, carbon and carbon dioxide in at least one refractory packed reaction zone, the improvement which comprises cooling the molten metal following contact in said at least one refractory packed reaction zone by passing the molten metal downward from said reaction zone and through a vessel containing at least one alkaline earth carbonate selected from the class consisting of calcium carbonate and magnesium carbonate to decompose said carbonate to the corresponding alkaline earth oxide and to carbon dioxide for use in the carbon monoxide producing refractory packed reaction zone.

2,449,360
PREPARATION OF HIGHLY HALOGENATED FLUOROALKANES
Paul Rolland Austin, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 11, 1943, Serial No. 498,253
8 Claims. (Cl. 260—653)



1. The process for the preparation of highly halogenated alkanes, which comprises bringing into admixture, in the presence of a Friedel-Crafts catalyst, a halogenated methane containing at least 3 halogen atoms attached to the carbon, not more than one of the halogen atoms being a fluorine atom, and a halogenated ethylenic compound having at least one chlorine atom attached to one of the doubly bonded carbon atoms, said halogenated methane and said halogenated ethylenic compound being further characterized in that at least one of them contains at least one fluorine atom.

2,449,361
WINDOW CONSTRUCTION
Roy T. Axe, Syracuse, N. Y., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y., a corporation of New York
Application June 13, 1944, Serial No. 540,026
1 Claim. (Cl. 20—54)

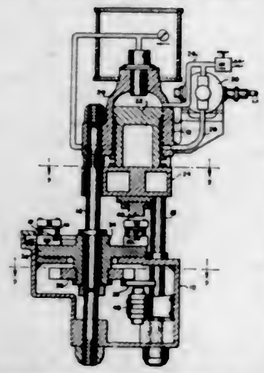


A window construction comprising a sash guide formed with a channel having a movable resiliently pressed bottom, and a sash having a rib extending into the channel, the bottom of the channel having a follow-up movement toward the end edge of the rib, and a weather strip U-shaped in general form and embracing the rib, the strip being anchored to the sash at the base of the rib having its side and intermediate portions normally tending to bulge outwardly from the sides and end edge of the rib to coact with the sides and bottom of the channel, whereby the pressure of the bottom of the channel against the intermediate portion of the weather strip tends to bulge the sides and the compression of the sides of the strip between the walls of the channel tends to bulge the intermediate portion of the strip against the bottom of the channel.

2,449,362
EXPLOSION-PROOF LAMP
James R. Bell, La Grange, Ill., L. David Stacy, Burkburnett, Tex., and Irvin E. Dischinger, Jr., Berwyn, Ill., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 25, 1947, Serial No. 737,122
3 Claims. (Cl. 240—11.2)

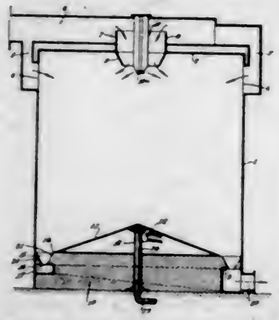
1. A portable light source comprising an incandescent electric lamp, a lamp housing including a lens adjacent said lamp, pressure outlet openings for directing pressure flow outwardly away from said lens, a pressure inlet connection adapted to be connected to a source of fluid pressure, an electric switch adapted to be closed by flow of pressure therethrough and connected to said pressure inlet connection and a manually operable electric lamp switch operable to a closed position from outside said housing, and a power cable extending through an opening in said housing for connecting said lamp and switches in series with an electrical power source.

2,449,363
SWITCH LEVER STOP
Homer E. Blair, McCool, Ind.
Application June 27, 1944, Serial No. 542,396
6 Claims. (Cl. 74—526)



3. A switch lever stop including a substantially flat base, and an abutment portion curving upwardly and inwardly from one end of said base, the free end of said abutment portion contacting the flat base, and a weld joining said free end to said base.

2,449,364
PROCESS FOR ISOLATING VANILLIN
André Blankart, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application August 6, 1946, Serial No. 688,693. In Switzerland October 15, 1945
5 Claims. (Cl. 260—600)

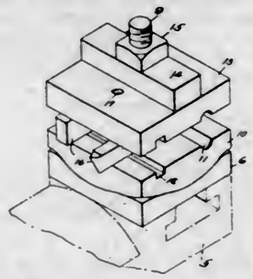


1. A process for isolating vanillin from its aqueous solutions, comprising adsorbing it at a pH of between 5 and 9 on to an adsorption agent which is an anion exchange resin from m-phenylenediamine and formaldehyde and eluting it therefrom by means of solvents.

2,449,365
APPARATUS FOR FORGING
Walter F. Bober, Cleveland, and Frank E. Sebring, Mount Gilead, Ohio, assignors to The Hydraulic Development Corp., Inc., Wilmington, Del., a corporation of Delaware
Application December 14, 1945, Serial No. 634,989
7 Claims. (Cl. 219—3)

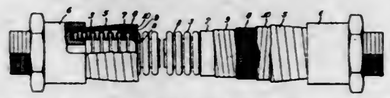
1. A forging press for carrying out continuous forging operations comprising; a workpiece heating and die loading station; a forging station; a workpiece ejecting and die unloading station; and a die cooling station; a plurality of forging dies; a turret mounting said dies; and means for indexing said turret to bring said dies successively into each of said stations, said die cooling station comprising an air blast pipe extending around the periphery of said turret so as to be effective on a plurality of dies at one time.

2,449,366
VIBRATING CONICAL DISCHARGE MEANS FOR SPRAY DRIERS
William Spencer Bowen, Westfield, and Walter Isaac McCrum, Belmar, N. J., assignors to Bowen Research Corporation, Garwood, N. J., a corporation of New Jersey
Application April 21, 1944, Serial No. 532,164
3 Claims. (Cl. 159—45)



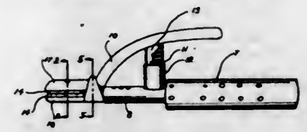
1. In a device for removing finely divided material from a chamber, the combination of a chamber floor having a central opening and a peripheral channel therein, a discharge outlet connected to said channel, a hollow, non-rotatable, substantially conical deflector having its apex upward and its edge adjacent to said channel, and substantially completely covering the portion of the floor enclosed by said channel, adjustable means centrally of and supporting said deflector in spaced relation to said floor to provide a space between said floor and said edge of said deflector of variable width, means for introducing air through said central opening for flow outwardly through said space between the floor of the chamber and the lower edge of the deflector to aid in discharging and cooling said finely divided material and preventing said finely divided material from accumulating between said floor and said deflector, and means for vibrating said deflector.

2,449,367
TAPPED TRANSFORMER SYSTEM
Aram Boyajian, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application December 12, 1945, Serial No. 634,571
6 Claims. (Cl. 323—43.5)



1. In an alternating-current voltage-control under load system, in combination, a transformer winding having a plurality of taps, means for selectively connecting said taps into a circuit under load, said means including impedance means, and means for causing said impedance means to offer two different and independent substantial impedance values, namely, a high impedance value to circulating currents when in continuous operation in shunt connection across a pair of said taps, and a low impedance value preparatory to interrupting said shunt connection.

2,449,368
TOOLHOLDER
Louis Bartley Brown, Duquesne, Pa.
Application June 17, 1946, Serial No. 677,193
1 Claim. (Cl. 82—37)

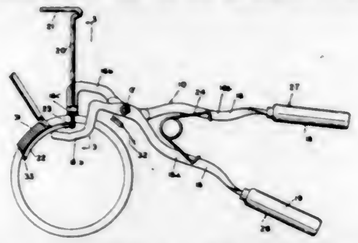


A tool holder of the class described, comprising a base plate adapted to be fitted on the tool rest of a lathe, said base plate having an enlarged central opening and a concaved upper surface, a securing post having a head fitted in a groove of the tool rest, said post having threads adjacent to the head, a threaded washer fitted on the threads and cooperating with the head in securely holding the post in an upright position, a tool clamping plate having a convex lower surface resting on the concaved surface of the base plate and being adjustable with respect thereto, the tool clamping plate having an enlarged opening through which the post extends, the clamping plate pivoting with respect to the post, a third plate resting on the last mentioned plate and adapted to clamp a tool therebetween, the latter plate having an opening through which the post extends, a nut on the post cooperating with the head of the bolt in moving the plates to clamp a tool therebetween, and guide pins secured within the tool clamping plate and being loosely mounted within bores of the third plate aligning said tool clamping and third plates.

2,449,369
FLEXIBLE METAL HOSE
Lewis B. Doane and Frank B. Bentley, New London, Conn., assignors to Electric Boat Company, Groton, Conn., a corporation of New Jersey
Application January 8, 1945, Serial No. 571,771
7 Claims. (Cl. 138—58)

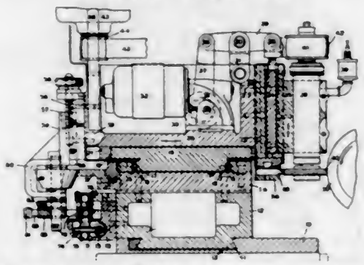
1. In a flexible metal hose, a circumferentially corrugated length of metal tubing, and a viscous vibration damping material substantially filling the exteriorly opening corrugations of said tubing effective for substantially damping out vibration thereof.

2,449,370
ELECTRODE HOLDER
Thomas S. Donnelly, Detroit, Mich.
Continuation of application Serial No. 520,346, January 29, 1944. This application April 12, 1946, Serial No. 661,518
8 Claims. (Cl. 219—8)



1. In an electrode holder of the class described, a pair of relatively movable gripping jaws for gripping an electrode therebetween, each jaw having a portion substantially semi-circular in cross-section; and an insulating member having an outer surface substantially semi-circular in cross-section mounted on and covering said portion.

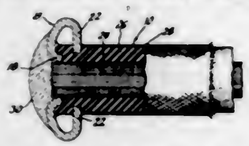
2,449,371
METHOD AND MEANS FOR WELDING PIPES AND THE LIKE
Emery Dutch, New York, N. Y.
Application July 20, 1945, Serial No. 606,191
5 Claims. (Cl. 113—111)



5. A tool for protecting and keeping smooth the inside of a welded portion of the ends of two pipes placed adjacent to, but spaced apart from, one another, comprising a back up plate, means to turn the same edgewise and to insert it into the inside of the pipes through said space between them, said plate then being adapted to be turned flat to the walls of the pipes and to overlap the space between them, means to press said plate against said walls over the mentioned portion of said space from the inside, said last mentioned

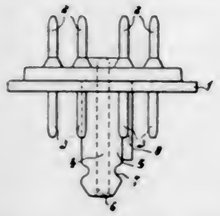
means being operable from the outside, said plate then preventing the welding material, from protruding into the inside of the pipes, means, operable from the outside, adapted to release said back up plate and allow the moving of the same against an adjacent portion of the space between the

pipes, whereupon said adjacent portion may be filled with welding material, portions of said plate being adapted to again be turned edgewise to said space and to be so removed from the inside of the pipes through a portion of the space between them, left open.



2,449,372
COMPENSATING ABRASIVE WHEEL DRESSING MACHINE
George F. Eglinton, Lincoln Park, and Donald J. Woodworth, Detroit, Mich., assignors to Lincoln Park Industries, Inc., Lincoln Park, Mich., a corporation of Michigan
Application November 15, 1944, Serial No. 563,474
13 Claims. (Cl. 51—100)

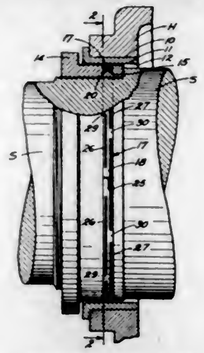
1. A compensating grinding wheel dresser comprising a base, a table mounted for longitudinal and transverse reciprocation relative to said base, a rotatable dressing wheel carried on a spindle mounted on said table for vertical reciprocation relative thereto, and power means for simultaneously rotating and reciprocating said spindle and dressing wheel vertically relative to the grinding wheel to be dressed, and means for moving said table longitudinally and transversely of said base in a predetermined path and including a fixed cam on said base, a cam follower secured to said table, and means for moving said cam follower relative to said cam.



2,449,373
LAMP CONDUCTOR CONTACT
Robert N. Falge and William T. Mears, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 28, 1944, Serial No. 570,056
2 Claims. (Cl. 173—269)

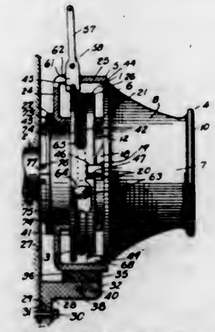
2. The combination with an insulated conductor having a central conducting core and an insulating cover, of a terminal contact on said conductor comprising a member having a central opening with an inturned flange which is forced on the end of said conductor with said flange embedded in the end of said insulating cover

around said core with the end of said core extending within said central opening, and solder applied to and covering the end of said core and the portion of said contact member around the central opening therein.



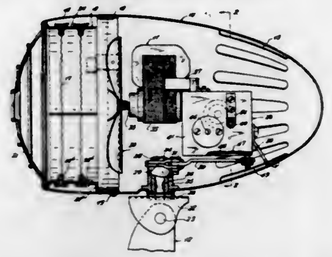
2,449,374
ELECTRIC DISCHARGE TUBE BASE
Pieter Harm Fennema, Johan George Kronouer, and Frits Prakke, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application July 16, 1946, Serial No. 684,088
In the Netherlands July 23, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 23, 1963
4 Claims. (Cl. 250—27.5)

1. An electric discharge tube base comprising a wall portion of insulating material, a plurality of electrical contact members secured to and extending through said wall portion, a pin member having a portion thereof secured within and extending from said wall portion, and a tubular contact locating member having one end portion abutting said wall portion and surrounding said pin member, said pin member being secured to said tubular member at the portion thereof remote from said wall portion.



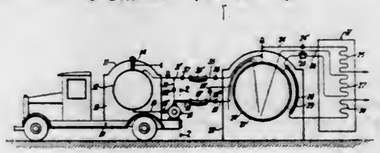
2,449,375
SHAFT SEAL
Fredrick G. Ferguson, Shaker Heights, and Ralph C. Thompson, Cleveland Heights, Ohio, assignors to Simplex Piston Ring Mfg. Company, a corporation of Ohio
Application February 26, 1945, Serial No. 579,758
1 Claim. (Cl. 286—11.16)

In a seal for preventing leakage of fluid between a rotating shaft and an opening through which the shaft extends, said shaft being provided with an annular groove, a transversely split metallic ring surrounding the shaft and having end faces in sealing engagement with the walls of said groove, said ring being provided with two rows of staggered circumferential slots to impart axial resilience thereto, and an expander spring disposed in said groove within said ring and expanding the ring outwardly, said ring being provided with an inwardly projecing bead disposed between said rows of slots and said spring engaging said bead at circumferentially spaced re-



gions thereon, whereby the axial resiliency of said ring is not substantially impaired by the action of said spring.

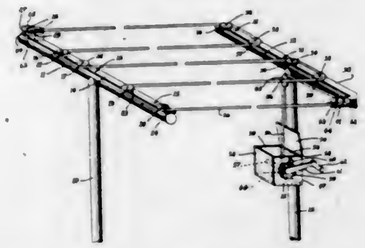
2,449,376
CATHEAD
Orren M. Gahagan, Dallas, Tex.
Application March 23, 1945, Serial No. 584,341
3 Claims. (Cl. 254—173)



3. A device of the character described including a driving member having a bearing portion extending coaxially from a side thereof, a sheave control housing carried on the bearing portion, a sheave rotatable about the bearing portion and slidable axially thereof, said sheave having an annular flange at one side of a line groove in said sheave, means extending laterally from the driving member and sheave on facing sides thereof and adapted to interengage when the sheave is shifted laterally from an idle position toward the driving member to effect interengagement of said laterally extending means, a lever having a forked end engaging the annular flange, means for pivotally mounting the lever on the control housing to effect said shift of the sheave, throwout means on the control housing engageable with the means on the sheave to effect disengagement of said laterally extending means after a predetermied rotation of the sheave by the driving member and to effect return of said sheave to idle position, a jerk line having one end anchored to the sheave for winding about the sheave when the sheave is rotated by the driving member and to effect reverse rotation of the sheave upon disengagement of said laterally extending means, stop means on the control housing for limiting the extent of reverse rotation of the sheave about said bearing portion, and a latch carried by the control housing and engaging over said flange to retain the sheave in said idle position during any turning of the sheave incidental to manipulation of the jerk line prior to release of said latch from engagement with said flange.

2,449,377
OSCILLATING FAN HEATER
Lee B. Green, Lakewood, Ohio, assignor to Designers for Industry, Inc., Cleveland, Ohio, a corporation of Ohio
Application January 17, 1945, Serial No. 573,219
6 Claims. (Cl. 230—264)

1. In a device of the character described, a support, a housing pivoted on said support, an electric motor in said housing, a fan connected with said motor to be driven thereby, a reduction gear device in said housing and connected with said motor to be driven thereby and including a closed gear casing, linkage located in the housing and connected with said support and reduction gear device so as to cause oscillation of said housing, said reduction gear device having a releasable drive connection located in said gear casing and comprising cooperating toothed members one of which is shiftable to engage or disengage the other, a spring in said gear casing tending to hold the teeth of said members in meshing engagement, the form of said teeth and the pressure of said spring being such as to permit temporary slippage between said members when movement of said housing is obstructed, and a manually operable member projecting from said housing and also having an actuating portion extending into said gear casing for causing engagement or disengagement of said toothed members.



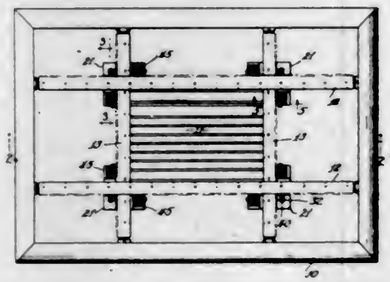
2,449,378
SYSTEM FOR DISPENSING A LIQUEFIED GAS
Odd A. Hansen, Kenmore, N. Y., assignor to The Linde Air Products Company, New York, N. Y., a corporation of Ohio
Application July 25, 1941, Serial No. 403,935
9 Claims. (Cl. 62—1)

1. In a system for dispensing a liquefied gas having a boiling point temperature at atmospheric pressure materially below 273° K., the com-

bination with a supply container having a space for holding gas and liquid therein and closable to the atmosphere, of consuming apparatus provided with a liquid receiving container having a space for holding gas and liquid therein and normally under pressure, valved means for establishing both gas and liquid phase transfer connections between the gas and liquid holding portions of said spaces in said containers, a rotary type pump in said liquid phase transfer connections, priming means for said rotary type pump leading to the gas space of said supply container, and means for establishing an additional transfer passage between the gas holding space of said receiving container and the liquid holding space of said supply container.

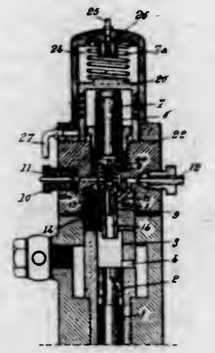
2,449,379
CLOTHESLINE SUPPORT
Frank J. Hencir, St. Paul, Minn.
Application March 12, 1945, Serial No. 582,354
1 Claim. (Cl. 211—119.15)

A clothes line support for use in combination with T-shaped clothes poles comprising a pair of relatively thin, flat, elongated strips, means at spaced intervals securing said strips in parallel relation to the cross arms of the T-shaped poles to be reinforced thereby, spaced pulleys mounted for rotation upon said strips, means on one end of one of said strips to which the end of the line may be anchored, a downwardly extending flange on the forward edge of the other of said strips at one end thereof, a horizontally extending flange projecting forwardly from the lower end of said downwardly extending flange, a pulley supported upon said horizontally extending flange, a pulley on the post of the T-shaped pole to which said other strip is attached, a shaft mounted on said one pole below said pulley, a ratchet on said shaft, a pawl on said one pole adjacent said ratchet and engageable therewith to prevent rotation thereof in one direction, and a crank on said shaft for rotating the same.



2,449,380
MORTAR CHARGE
Clarence N. Hickman, Jackson Heights, N. Y.
Application November 29, 1944, Serial No. 565,645
3 Claims. (Cl. 102—49)

1. In combination a projectile for a muzzle-loaded mortar, including an ogive front portion, a base portion having a tubular ignition cartridge holder secured thereto, a propellant charge supported on said holder comprising a first and second part, an ignition cartridge in said holder for igniting said first part, said first part of said propellant charge comprising a plurality of disc-like sheets of propellant material of a diameter substantially less than the diameter of said projectile, said second part of said propellant charge comprising a plurality of disc-like sheets of propellant material of a diameter equal substantially to the diameter of said projectile support on said holder to provide a snug fit with the mortar barrel whereby the high pressure developed by said first

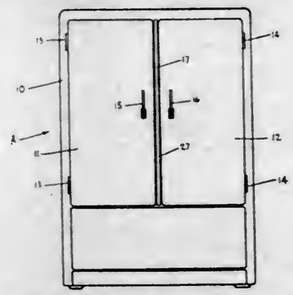


part will pack the laminations of said second part tightly against the base of said projectile to temporarily seal the flame path to the laminations of said second part, so that the laminations of said second part will be progressively ignited.

2,449,381
ADJUSTABLE FORM LOCKING CHASE STRUCTURE
Henry J. Hilland, Chicago, Ill.
Application December 12, 1946, Serial No. 715,764
11 Claims. (Cl. 101—393)

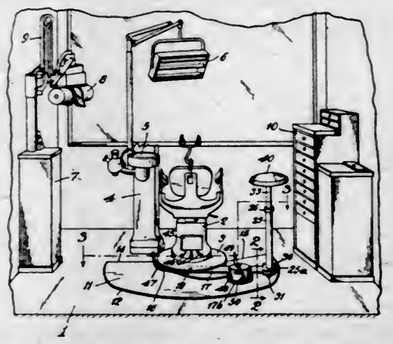
1. In a form locking-up device, a lock-bar adapted to lie across the space within a printer's chase, said lock-bar being adapted to engage one side of a form, and having rack teeth along one edge, a second lock-bar extending at right angles to the first mentioned lock-bar and in the space within the chase, and having rack teeth along one edge, a lock-up device slidably guided upon the last mentioned lock-bar, and having a hollow block formed thereon, arranged to engage the first mentioned lock-bar, and a pinion journaled in the block and meshing with the rack teeth of the second mentioned lock-bar, said pinion having a socket adapted to receive a tool for rotating the pinion, and bar locking means carried by the lock-up device and adapted to mesh with the teeth of the lock-bar with which the pinion meshes to prevent relative motion between the lock-up device and said lock-bar.

2,449,382
FUEL INJECTION DEVICE
Robert Huber, Paris, France, assignor of nine-tenths to Raul Pateras Pescara, Paris, France, and one-tenth to Societe d'Etudes et de Participations, Eau, Gaz, Electricite, Energie, S. A., Geneva, Switzerland, a society of Switzerland
Application October 2, 1946, Serial No. 700,767
In France October 22, 1945
4 Claims. (Cl. 103—37)



1. A fuel injection device which comprises, in combination, means forming an accumulator chamber for fuel under pressure, a piston pump for feeding fuel to said chamber, a delivery conduit for leading fuel from said chamber to a fuel injector, a valve adapted to control communication between said chamber and said conduit slidable in line with the pump piston and adapted to be pushed by it into opened position at the end of the inward stroke of said piston, and a check valve between said chamber and said pump.

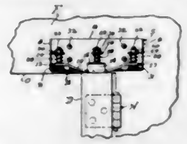
2,449,383
BRAKE OR THE LIKE FRICTIONALLY ENGAGEABLE STRUCTURE
Willson H. Hunter, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 28, 1943, Serial No. 508,038
6 Claims. (Cl. 188—152)



1. A brake or the like frictionally engageable structure comprising a torque frame, an expander tube in said frame, a series of friction blocks at a face of said tube, bowed retractor springs bearing on said blocks and extending axially across said frame, and means on said frame for supporting the ends of said springs while accommodating change of length of the springs during flexure thereof, the last said means comprising C-shaped elements hooked about the ends of said springs and about portions of said frame.

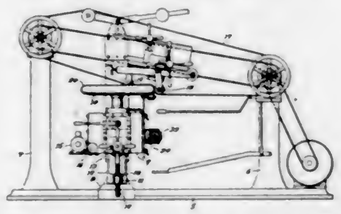
2,449,384
REFRIGERATOR MULLION CONSTRUCTION FOR PREVENTING CONDENSATION
Willis E. Hursey, Oak Park, and Gilbert Strunk, Glen Ellyn, Ill., assignors to Seeger-Sunbeam Corporation, St. Paul, Minn., a corporation of Minnesota
Application January 9, 1946, Serial No. 639,945
8 Claims. (Cl. 62—89)

1. A refrigerator comprising a cabinet body having a pair of door openings in one side thereof, a mullion in said body between said openings, a door in each of said openings, said doors being hinged to sides of said door openings opposite said mullion, marginal portions on said doors overlying portions of said cabinet side and mullion in closed positions of the doors, and a projecting member on said mullion projecting outwardly beyond said one cabinet side between said marginal portions of said doors.



2,449,385
DENTAL CHAIR UNIT
Carroll W. Johnson, Chicago, and John T. Clark, Cicero, Ill.
Application September 17, 1945, Serial No. 616,834
2 Claims. (Cl. 32—22)

1. In a seat assembly for use with a vertically axised rotatable dental chair having a floor engaging base, a plate formed and adapted to be positioned beneath such base, said plate being adjustably fixed and frictionally held on the floor by the weight of the chair base, when positioned beneath such base, a horizontally extending arm member located adjacent the floor and pivoted to said plate for rotation about a center adjacent the edge of said base, a stool supported on the outer end of said arm, said plate being readily shiftable about the axis of the chair base to adjust the center of rotation of the arm about the center of the chair base, to vary the arc of swing of said



stool, and a control box mounted on and movable with said arm, said control box having movable control elements with parts extending laterally from said control box and located closely adjacent the floor level.

2,449,386
DOOR AND CLOSURE HOLDER
Francis Johnson, Detroit, Mich.
Application June 28, 1944, Serial No. 542,468
11 Claims. (Cl. 292—74)

1. A closure holder, comprising an approximately U-shaped bracket adapted to be affixed to a door frame, an elongated arcuately curved shoe member carried at its ends by the bracket arms and having its arcuately-curved intermediate portion extending through the gap between said arms adapted to engage the top edge of said closure adjacent the hinged end thereof, guide members carried by the bracket arms for slidably supporting each end of said shoe member, and resilient elements mounted on said arms for yieldingly urging said shoe member into frictional engagement with said closure, said resilient elements being mounted on the guide members and arranged to exert a downward pressure on each end of said shoe member.

2,449,387
AIR-BAG CLEANING AND BUFFING MACHINE
John Eric Johnson, West Hartford, Conn., assignor to National Sherardizing and Machine Company, Hartford, Conn., a corporation of Connecticut
Application March 12, 1946, Serial No. 653,901
2 Claims. (Cl. 51—145)

2. A machine of the character described for cleaning a rubber bag or the like comprising a supporting frame, a supporting member rotatable on a horizontal axis in said frame, a plate carried on said member, a carriage slidable vertically on said plate, a screw on said plate for slidably adjusting said carriage thereon, a table rotatable in a horizontal plane and mounted on said carriage for supporting a bag to be cleaned, means for rotating said table, an abrasive belt, means for carrying said belt and moving it across the top of said table and in a direction perpendicular to the axis of said member, and manually controlled gearing mechanism for tilting said carriage on the axis of the member in said frame to position the bag at different angles relatively to the belt.

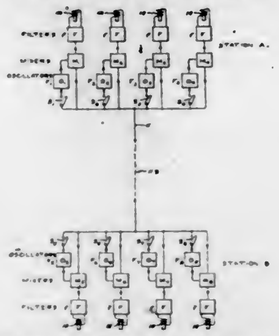
2,449,388
PROCESS OF FORMING COLORED IMAGES BY MEANS OF ARYL HYDRAZONES OF GLYOXYLIC ACID AMIDE
John David Kendall and Harold Gordon Suggate, Ilford, England, assignors to Ilford Limited, Ilford, England, a British company
No Drawing. Application May 24, 1946, Serial No. 672,160. In Great Britain June 8, 1945
4 Claims. (Cl. 95—88)

1. A process of colour photography which includes the step of forming a coloured image in a photographic emulsion layer carrying an image in a reducible silver salt by developing such image, in the presence of a caustic alkali and at a temperature of at least 20° C., by means of a compound of the general formula

$$R—NH—N=CH—CO—NH_2$$

where R is an aromatic nucleus, and thereafter removing residual silver and silver salts from the layer.

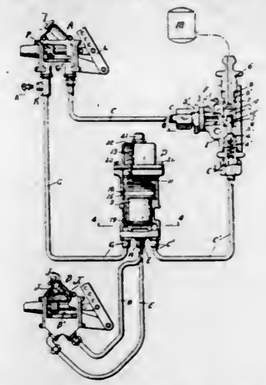
2,449,389
VENTILATING WINDOW
Walter Kiesewetter, Ferndale, Mich.
Application August 27, 1945, Serial No. 612,970
2 Claims. (Cl. 98—88)



1. In a device of the character described, including a frame adapted to be mounted in a window opening, and having a plurality of panels of glass pivotally mounted therein, the combination of an arm secured to each panel pivot, coil springs connecting the adjacent arms, rocker arms at the top and bottom of each frame, a chain connecting the upper rocker arm to the lower rocker arm, and linkage connecting the upper rocker arm to one of said first named panel pivot arms, and linkage connecting the lower rocker arm to another of said panel pivot arms.

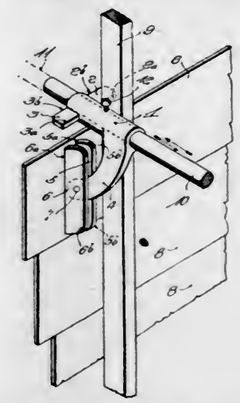
2,449,390
PROCESS FOR THE PRODUCTION OF HARD RUBBER
Richard Anderson Kirby, Croydon, England, assignor to Expanded Rubber Company Limited, Croydon, England
No Drawing. Application January 25, 1946, Serial No. 643,481. In Great Britain January 29, 1945.
5 Claims. (Cl. 18—53)

1. A process for the production of hard rubber-like materials which comprises heating a mix containing at least one substance selected from the group consisting of natural rubber and rubber-like materials capable of reacting with sulphur to produce vulcanised products, suitably compounded with vulcanising ingredients to form an ebonite product, the mass being surrounded by an inert fluid medium at the final vulcanization temperature and at a pressure of at least 1,000 lbs. per square inch to inhibit the formation of gas bubbles, the mass having previously been soft vulcanised in known manner under conditions precluding any substantial penetration by the surrounding medium so that it is capable of resisting any substantial penetration thereof by the surrounding fluid medium during the final vulcanization under pressure.



2,449,391
BIDIRECTIONAL SELECTIVE REMOTE CONTROL SYSTEM
León Kogane, Paris, France, assignor to General Electric Company, a corporation of New York
Application January 21, 1948, Serial No. 3,464
In France June 22, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires June 22, 1965
2 Claims. (Cl. 177—353)

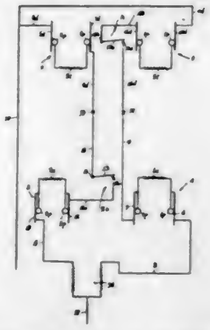
1. A bi-directional selective remote control system comprising a pair of separated control stations, a plurality of oscillation generators at one station, a corresponding number of oscillation generators at the other station, the frequencies of the generators at each station differing from each other and from a selected beat frequency, said frequencies being so selected that the beat frequencies produced by combining any selected generator frequency at one station with any other generator frequency at either station include only one combination at said selected beat frequency and that with a generator frequency at the other station, a corresponding number of frequency converters at each station each having one input connected to a common signal transmission channel interconnecting said stations and a second input energized from a respective generator, a frequency-selective control circuit connected to the output of each of said converters, said circuit being adapted to respond to said selected beat frequency and substantially to attenuate other beat frequencies, and switching means for selectively impressing any one or more of said generator frequencies upon said common channel.



2,449,392
PULSATOR SYSTEM
Arthur E. Kremiller, Glendale, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application May 25, 1945, Serial No. 595,752
5 Claims. (Cl. 60—54.5)

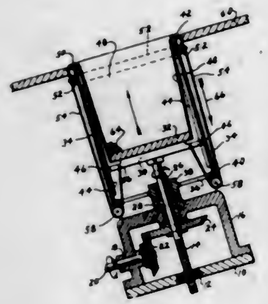
4. A valve means adapted to be connected in series in one line of a hydraulic system, said means comprising a valve body having a pair of communicating ports adapted to be connected to the adjacent ends of said fluid line and a third port adapted to be connected to a source of fluid supply, a check valve disposed between said pair of ports, a second check valve associated with said third port arranged to permit fluid flow

from said source of supply, and devices associated with said check valves operable in one position of adjustment to disable said first named check valve and to lock said second named check valve against its seat and in another position of adjustment to release both of said valves for free operation as check valves.



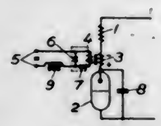
2,449,393
BOARD PRY
Eldon L. Krieg, South Whitley, Ind.
Application October 3, 1945, Serial No. 619,955
7 Claims. (Cl. 254—131)

1. A tool comprising a tubular member having a pair of integrally formed lugs projecting radially in a diametrical plane adjacent one end thereof, a lug integrally connected with the opposite end of said tubular member and extending radially therefrom in a plane substantially normal to the plane of the aforesaid lugs, a reversible prying lever insertable in either direction through said tubular member and a board-engaging member pivotally connected with said last-mentioned lug and operative to pry a board from nailed engagement with a joist about which one



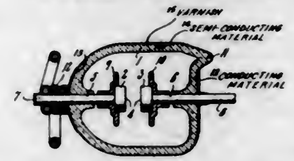
of said first-mentioned lugs moves as a fulcrum under forces applied by said reversible prying lever adjacent either end of said tubular member.

2,449,394
HOLDER FOR FLUORESCENT LAMPS
Eugene R. Kulka, Mount Vernon, N. Y.
Application March 17, 1945, Serial No. 583,221
1 Claim. (Cl. 315—96)



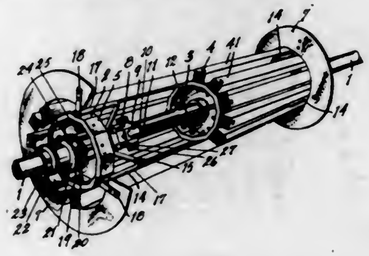
In combination, a pair of parallel holder casings, each holder casing having a pair of lamp sockets and a starter-casing-socket which is located between said lamp sockets, said holder casings being spaced longitudinally from each other along a longitudinal axis which extends through said starter-casing-sockets and being perpendicular to said longitudinal axis, each lamp socket of one holder casing being longitudinally alined with a lamp socket of the other holder casing to provide a respective longitudinally alined pair of lamp sockets, each lamp socket having an outer contact blade and an inner contact blade, only one inner contact blade of each lamp socket being an extended blade which is laterally extended towards the other inner contact blade of the respective holder casing into said starter-casing-socket to provide an additional contact blade in said starter-casing-socket, each said starter-casing-socket having a supplemental contact blade, said laterally extended inner blades being on opposite sides of said longitudinal axis, the two outer contact blades of one holder casing being connected to one power main of a source of alternating current, the two outer contact blades of the other holder casing being connected to the other power main of said source of alternating current, a starter-casing located in each said starter-casing-socket and having respective contacts which respectively contact with the respective additional contact blade and the respective supplemental contact blade, each said starter-casing having a movable and thermally controlled starter switch-blade which is permanently connected to the respective supplemental contact blade and which is biased to normally contact with the respective additional contact blade, the other and non-extended inner blade of each said holder casing being connected to the supplemental blade of the starter-casing socket of the other holder casing, two longitudinal ionic discharge lamps, each discharge lamp having a pair of external contact prongs at each end thereof and a filament connected between each said pair of contact prongs, each said lamp having a pair of said contact prongs located and held in a respective pair of longitudinally alined lamp sockets with each pair of external prongs contacting with a respective outer contact blade and an inner contact blade, said switch blades being movable to break the circuit between said additional contact blades and said supplemental contact blades when said lamps are sufficiently heated for direct discharge between their respective filaments.

2,449,395
FEEDING DEVICE HAVING FLEXIBLE TUBULAR WALL, WITH COMPOUND MOTION FOR PERIPHERAL DISCHARGE
Eino E. Lakso, Fitchburg, Mass.
Application June 23, 1944, Serial No. 541,792
11 Claims. (Cl. 222—169)



1. In a device of the class described, a container comprising a bottom and an attached flexible tubular wall and having an open end, substantially continuous means over which the open end of the tubular wall is trained, and means for causing the bottom to approach said first named means and simultaneously causing the flexible tubular wall to travel over said first named means in a direction opposite to the direction of movement of the bottom.

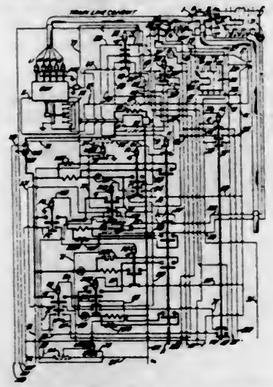
2,449,396
MEANS FOR INFLUENCING THE BLOCKING VOLTAGE IN CURRENT CONVERTER VALVES
Uno Lamm, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Västerås, Sweden, a corporation of Sweden
Application December 3, 1945, Serial No. 632,471
In Sweden December 23, 1944
13 Claims. (Cl. 315—284)



1. In a static current converter, a gas or vapor containing current path, an inductive reactor containing an iron core connected in series with said current path, and a substantially instantaneous admittance connected in parallel directly across said current path, the minimum inductance of said reactor in its unsaturated state being so dimensioned with respect to said admittance that said reactor absorbs a voltage giving a voltage time integral substantially corresponding to full reversal of the magnetization of said reactor core from positive to negative saturation.

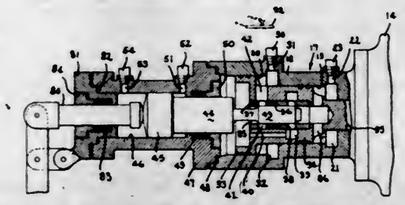
2,449,397
ELECTRIC SPARK GAP
Richard W. Lamphere, Wilbraham, Mass., assignor to American Bosch Corporation, Springfield, Mass., a corporation of New York
Application January 31, 1945, Serial No. 575,418
6 Claims. (Cl. 250—27.5)

1. An electric spark gap comprising an envelope, electrodes mounted within the envelope, said electrodes being sufficiently closely spaced to each other to provide a spark gap, and a semi-conducting coating externally of and entirely enclosing said envelope, said coating being sufficiently conductive to conduct bound charges, but not sufficiently conductive to short circuit the gap, said semi-conducting coating being electrically connected with at least one of said electrodes.



2,449,398
ADJUSTABLE HEADS FOR PAPER WINDING REELS
Leo Leas, Vicksburg, Mich., assignor to Lee Paper Company, Vicksburg, Mich., a corporation of Michigan
Application February 13, 1946, Serial No. 647,298
6 Claims. (Cl. 242—124)

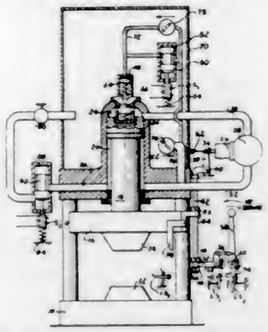
6. In a winding reel, the combination of a shaft, reel head members and a reel spool element carried thereby, an annular flange embracing said spool element for adjustment axially thereof, a sleeve disposed on said shaft between said head members for axial adjustment, flange supporting brackets carried by said sleeve, and means for adjusting said sleeve from the outer side of one of said head members.



2,449,399
GENERATING ELECTRIC TRACTION AND CONTROL SYSTEM
Torsten O. Lillquist, Hinsdale, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 21, 1947, Serial No. 769,790
12 Claims. (Cl. 290—17)

5. A generating electric traction and control system for a locomotive comprising traction motors for driving the locomotive, motor excitation reducing means, a power plant for said motors, power plant output varying means, power connections including switching means for causing transition of the motor power connections between different power circuit relations with said power plant, control, interlocking and train line connections between said motor excitation reducing means, said power plant output varying means and said switching means to cause combined and sequential operations thereof for causing a reduction in the output of said power plant during transition of the motor power circuit relations and a reduction in the motor excitation for each power circuit relation, said control, interlocking and train line control connections including a manually operable master power output

controller, a manually operable master motor transition controller and automatic motor transition control means operable in response to electrical conditions in said motor power circuit relations, and a manually operable selector switch for rendering only said master transition controller effective for controlling said above described combined and sequential operations and for rendering the automatic transition control means effective for controlling said operations and at the same time rendering said master transition controller effective for forestalling certain of said operations.

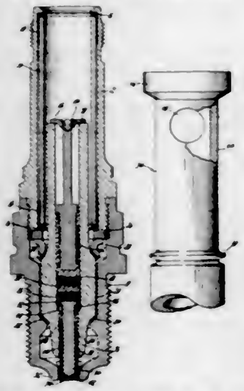


2,449,400
FOLLOW-UP TYPE SERVOMOTOR
Robert J. Lindsey, Mount Gilead, Ohio, assignor to The Hydraulic Development Corp., Inc., Wilmington, Del., a corporation of Delaware
Application October 7, 1942, Serial No. 461,209
2 Claims. (Cl. 121—41)

1. In a servomotor, a first differential piston, a first cylinder within which said first piston is reciprocable, said cylinder including fluid inlet means and fluid outlet means, a valve associated with said first piston for controlling the flow of fluid to and from said first cylinder, a second differential piston integral with said valve, a second cylinder within which said second piston is reciprocable, said second cylinder being coaxial with said first cylinder and attached thereto, a

rod member for abutting and actuating said second piston in one direction irrespective of fluid pressures acting thereon, an auxiliary piston slidable on said second piston for engaging and moving the same a predetermined distance in the other direction and having a greater effective area than said second piston, and valve means selectively operable for supplying actuating fluid to said pistons for moving said first piston into full stroke position at both ends of its travel and into short stroke position in one direction, and means for actuating said rod member from outside said cylinders to move said first piston into a neutral position in the said one direction.

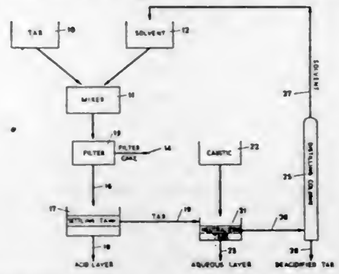
2,449,401
APPARATUS SELECTIVELY OPERABLE AS A PRESS OR AS A DROP HAMMER
Robert J. Lindsey, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application March 24, 1945, Serial No. 584,569
11 Claims. (Cl. 60—52)



10. In a fluid operable apparatus which is adapted for use as a press or as a drop hammer, a reciprocable platen having advancing and retracting means, a fluid source connected with said means; control means movable into a first position to bring about the supply of fluid from said source to said advancing means and into a second position to bring about the supply of fluid from said source to said retracting means, a surge valve connected between said advancing means and a reservoir, fluid operable means connected with said retracting means and responsive to a predetermined pressure therein for actuating said surge valve into open position, and means of maintaining said surge valve open to permit operation of said ram as a drop hammer comprising normally open valve means between said fluid operable means and said retracting means, and means selectively operable for closing said valve when said surge valve is open.

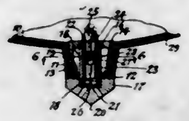
2,449,402
PROCESS FOR SEPARATING AROMATIC HYDROCARBONS FROM A HYDROCARBON MIXTURE
Moses Robert Lipkin, Philadelphia, and Alfred E. Hirschler, Drexel Hill, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application January 24, 1944, Serial No. 519,528
2 Claims. (Cl. 260—674)

1. A cyclic process for separating aromatic hydrocarbons from a hydrocarbon mixture containing aromatic and non-aromatic hydrocarbons and boiling within the boiling range of gasoline and kerosene which comprises treating said mixture in liquid phase with activated carbon to preferentially adsorb aromatic hydrocarbons therefrom and to yield a liquid of lowered aromatic content, then washing the used adsorbent, at ordinary temperature and without heating, with an essentially non-aromatic hydrocarbon liquid other than said liquid of lowered aromatic content, in sufficient amount to substantially desorb the aromatic hydrocarbons and to simultaneously reactivate the adsorbent for re-use, said essentially non-aromatic hydrocarbon liquid being the sole desorbing agent employed, withdrawing from the adsorbent a liquid mixture of desorbing agent and aromatics, and then, while the adsorbent is still wet with desorbing agent, directly re-using the adsorbent for further separation of aromatics in the manner specified.



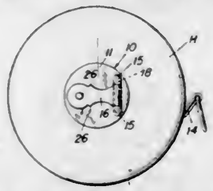
2,449,403
SPARK PLUG ELECTRODE
Taine G. McDougal, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 2, 1945, Serial No. 586,132
6 Claims. (Cl. 123—169)

2. In a spark plug, an insulator having a bore and an internal ledge in said bore, a tubular electrode in said bore having an exposed closed lower end and an open upper end within said bore, a shoulder on said electrode adapted to engage the ledge in said bore and a shank portion of smaller diameter than said bore between said shoulder and said exposed lower end of said electrode to provide an annular space between said electrode and bore, an opening through the wall of said electrode adjacent said shoulder, and a material of relatively high heat conductivity cast within said electrode and extending through said opening and filling said annular space between the electrode and the bore in the insulator.



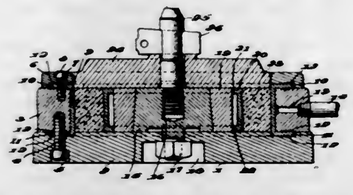
2,449,404
TREATMENT OF ACID TARS
Robert J. Miller, Berkeley, Calif., assignor to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application August 2, 1945, Serial No. 608,489
4 Claims. (Cl. 196—148)

1. A process for producing acid-free tar from an emulsified acid tar derived by hydrolyzing in the presence of water and steam an acid sludge resulting from the treatment with sulfuric acid of a petroleum stock boiling in the boiling range of gasoline and kerosene to produce and separate thereby a dilute acid layer and a layer comprising said emulsified acid tar, which comprises mixing the emulsified acid tar with a solvent therefor consisting predominantly of a mixture of aromatic hydrocarbons boiling in the range of about 340° to 470° F., adding a small amount of



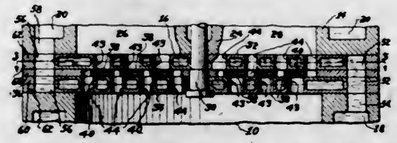
diatomaceous silica filter aid to the resulting mixture and then passing it through a filter, permitting the filtrate to settle whereby it separates into an upper relatively acid-free tar layer and a lower relatively acid rich aqueous layer, separating the two layers and neutralizing residual acid in the tar layer with caustic, subjecting the neutralized tar to distillation to separate the solvent and to recover acid-free tar as a product.

2,449,405
AIR PROPELLED TOP
Joseph R. Mordan, Alden, N. Y.
Application August 24, 1946, Serial No. 692,831
9 Claims. (Cl. 46—67)



1. An air-jet propelled top, comprising an elastic inflatable bag provided on its underside with a tubular neck, a peg which is connected with said neck and upon which the bag is adapted to turn, an air inlet valve device mounted on said peg and neck, and means for discharging air tangentially from said bag.

2,449,406
MEASURING TAPE REEL HOUSING CONSTRUCTION
Frank J. Mortimer, Blue Point, N. Y., assignor to Justus Roe & Sons, Patchogue, N. Y.
Application January 31, 1948, Serial No. 5,535
4 Claims. (Cl. 242—84.8)



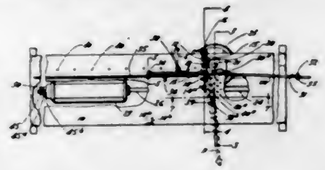
1. A rotary winding reel for measuring tape housings, said tape reel comprising a circular base, an annular winding flange formed integrally with said base, an arm pivoted externally of said base adjacent one end thereof, a handle element fixed to the free end of said arm, said circular base being apertured for the reception of said handle element in the folded position of said arm, an integral hub extending inwardly of said base and centrally of said winding flange, and a clamping member fixed to said hub and serving to retain the inner end of the measuring tape, said clamping member having integral yieldable means projecting outwardly thereof, whereby to releasably engage said handle element in the folded position of said arm and to allow manual engagement of said handle element in the extended position of said arm.

2,449,407
APPARATUS FOR FORMING GRINDING WHEELS
David E. Mulholland, Fort Myers, Fla., assignor to Walter S. Mulholland, Reading, Pa.
Application May 24, 1943, Serial No. 488,255
5 Claims. (Cl. 18—5)

1. An apparatus for forming a grinding wheel involving a mold having a disc-like cavity for receiving a mixture containing abrasive material; said mold comprising a base having an upstanding frusto-conical member rigid therewith and adapted to center a hub of said wheel within said cavity, a circular side wall of uniform diameter coaxial with and spaced from said frusto-conical member, means firmly securing said side wall to said base, a ring firmly secured to said side wall, an elastic lining embracing the inner area of said side wall and being clamped between said base, and ring at opposite ends of said wall, and a cover bearing upon and being removably secured to said frusto-conical member; said cover fitting neatly within said ring.

2,449,408
COMPRESSOR
Julius Naab, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application September 13, 1945, Serial No. 616,084
2 Claims. (Cl. 230—212)

1. A compressor comprising a cylinder having wall passages for the flow of cooling water, a detachable head having passages for the flow of cooling water, a valve assembly including a pair of seating members having a plurality of air ports and valve plates for said air ports, said seating members being hollow to define cooling water passages extending between the walls of



the said air ports, and inlet and outlet openings in the seating members to afford communication between the interiors of the seating members and the passages in said head and said cylinder.

2,449,409

BENDING MACHINE WITH PIVOTED BENDER CARRYING A WORK SUPPORTING ARM

Wilber E. Pettersen, Akron, Ohio, assignor, by mesne assignments, to Coleman-Pettersen Corporation, Cleveland, Ohio, a corporation of Ohio

Application November 19, 1945, Serial No. 629,437
5 Claims. (Cl. 153—20)

3. A bending machine comprising stationary members for engaging opposite faces of a length of wire to maintain the position of a portion of the wire, a pivotally mounted bending member for coacting with said stationary members for bending the wire, means for moving said bending member about its pivotal axis for bending the wire and work-supporting means pivotally mounted on the same axis with the bending member for movement therewith and engaging the moving portion of the wire at a position more remote from the bending position than is that of said bending member, the said work-supporting member having a face for forcing the wire in the direction of the bending movement and said face being, at starting position, so off-set as to hold the wire under a light bending strain, within its elastic limit, before the functioning of said bending member.

4. A bending machine comprising stationary members for engaging opposite faces of a length of wire to maintain the position of a portion of the wire, a movable bending member for coacting with said stationary members for bending the wire, means for applying a determinately limited actuating force to said bending member, and stop means engaging the wire only and always at a position farther from the bending position than that of the bending member's wire-engaging part and acting wholly by applying only bending force to the moving portion of the wire and being the only means for stopping the movement of the bending member.

2,449,410

PROTECTIVE DEVICE FOR HORSES' LEGS

John Polinsky, Cleveland, Ohio

Application May 10, 1947, Serial No. 747,265
1 Claim. (Cl. 54—82)

A protective stocking for a horse's leg, and particularly adapted to protect said leg in the vicinity of a joint, said stocking being of an elastic woven mesh fabric material characterized by resilient form fitting properties, said stocking being adapted to extend from above the knee joint to a point just above the hoof, said stocking being of seamless, single ply weave through a major portion of its length, but in the neighborhood of said knee joint being woven to a separable double ply throughout a substantial portion of its circumferential periphery whereby to provide a pocket between the plies in said neighborhood, said pocket retaining therein a pad of resilient material of rubberlike characteristics, high compressibility, and light weight, said pad being of substantial thickness near its mid portion, and tapering downwardly therefrom towards

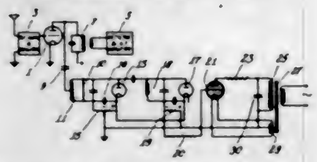
its peripheral edge, whereby to protect the knee joint encased in said stocking from injuries caused by accidental leg impacts with hard objects.

2,449,411

METHOD OF PREPARING SYNTHETIC SPICE

Gustav H. Rapaport, Kansas City, Mo.

No Drawing. Application March 5, 1945, Serial No. 581,185
9 Claims. (Cl. 99—140)



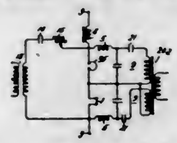
1. The method of preparing a synthetic spice which consists in heating cereal grain flour in the presence of moisture until the natural sugars of the cereal grain flour have been caramelized and said flour rendered substantially insoluble when incorporated in bakery products, cooling the caramelized cereal grain flour, and adding a spiced oil and incorporating the same into the caramelized cereal grain flour.

2,449,412

TUNING INDICATOR FOR INDICATING RESONANCE OF AN ELECTRIC CIRCUIT

Gerhard Rathenau, Arie Andries Kruithof, and Joseph Andries Hartveld, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application February 8, 1947, Serial No. 727,440
In the Netherlands July 26, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 26, 1964
4 Claims. (Cl. 250—40)



1. A device for indicating resonance of an electric circuit, particularly of the type employed in radio circuitry, comprising a tunable electric circuit, a dial and a movable index associated with said tunable electric circuit to indicate the setting thereof, a grid-controlled gaseous discharge tube mounted on said index, means to excite said gaseous discharge tube to provide a glow discharge therefrom, a first resonant circuit loosely coupled to said tunable electric circuit to produce a first voltage proportional to the voltage across said electric circuit, said first resonant circuit having a low damping, means to rectify said first voltage to produce a first potential proportional to the voltage across said tunable electric circuit, a second resonant circuit loosely coupled to said rectifying means to produce a second voltage proportional to the voltage across said tunable electric circuit, said second resonant circuit having a high damping, means to rectify said second voltage to produce a second potential proportional to the voltage across said tunable electric circuit, and means to apply said second potential to the grid of said gaseous discharge tube to modulate the glow discharge thereof to indicate resonance of said electric circuit.

2,449,413

SENSITIVE DIRECT-CURRENT MEASURING APPARATUS

Theodore A. Rich, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application July 11, 1945, Serial No. 604,398
4 Claims. (Cl. 179—171.5)

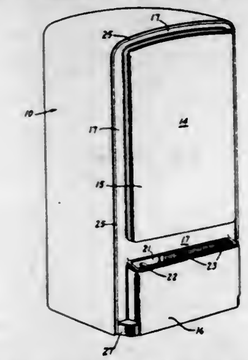
1. In direct current responsive apparatus, a monode comprising a bulb containing an atmosphere of hydrogen and a platinum resistance wire of the order of 0.0002 in. in diameter and $\frac{3}{16}$ in. long connected between similar platinum lead-in-wires, a high frequency oscillator supplied from a low frequency source by means of which the output of the oscillator is modulated and restricted to operation in alternate half-cycles of the low frequency source, connections for including the monode in the output circuit of said oscillator whereby the resistance wire thereof is alternately heated and allowed to cool during alternate half-cycles of the low frequency source, connections for including said monode in a direct current circuit such that a D.-C. voltage appears across the monode terminals proportional to current flow in the direct current circuit which voltage has a cyclic variation corresponding to the changes in the temperature and resistance of said wire, an alternating current circuit tuned to the frequency of the low frequency source excited by the D.-C. voltage variation across said monode, the circuit constants of the high and low frequency circuits associated with said monode being such that the corresponding currents are confined to their respective circuits and the flow of direct current therein is prevented.

2,449,414

LIGHTER

James F. Rogers, Rocky River, Ohio

Application August 28, 1945, Serial No. 613,052
6 Claims. (Cl. 67—7.1)



3. In a lighter of the character described, a casing having a compartment for absorbent material adapted to be saturated with inflammable fluid, a wick extending into said compartment from exteriorly of said casing, a sparking mechanism carried by said casing and including a combined sparking and ratchet wheel provided on its periphery with serrations and with circularly spaced ratchet teeth, a spring pressed flint carried by said casing and projecting exteriorly thereof adjacent to said wick and cooperating with the periphery of said wheel and engaging in one of said ratchet teeth when said wheel is idle, and means for rotating said wheel including a pawl operatively cooperating with the ratchet teeth of said wheel.

2,449,415

REFRIGERATOR CABINET CONSTRUCTION

Theodore W. Rundell, Abington, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

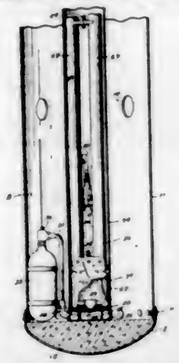
Application February 6, 1948, Serial No. 6,760
7 Claims. (Cl. 62—116)

1. In a refrigerator, a cabinet having a plurality of compartments therein, one of said compartments being adapted to house a condensing unit, and a panel structure associated with a side of said cabinet, said panel structure including a sheet having a recessed portion extending outwardly of the cabinet and having marginal portions secured to adjacent portions of said cabinet, and said recessed portion being so positioned as to comprise wall structure for the said one compartment and being apertured in an upper region thereof, whereby said recessed portion comprises a flue adapted to promote flow of cooling air in heat exchange relation with a condensing unit disposed within said one compartment.

2,449,416

ARTIFICIAL FUR FABRIC

Moses J. Schifrin, Laurelton, N. Y.



Application December 7, 1946, Serial No. 714,831
5 Claims. (Cl. 2—278)

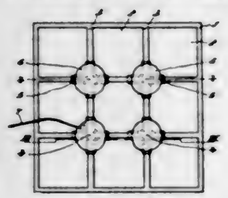
1. An artificial fur fabric having the appearance of Persian lamb comprising a base of pliable sheet material one surface of which has attached thereto, so as substantially to completely cover it, separate surfacing materials of two different characteristics, one of said materials being characterized by a continuous surface wrapping of

continuous filaments and the other of said materials being characterized by curled short fibers whose ends are exposed, said materials being applied flat upon said base in sinuous paths in side-by-side relationship.

2,449,417
BUOYANT GROUND STATION
Arthur B. Schultz, Wilmington, Del., assignor to All American Aviation, Inc., a corporation of Delaware
Application September 25, 1946, Serial No. 699,104
6 Claims. (Cl. 258—1.2)

6. In a ground station for air pick-up from a body of water, a tube, a slide in said tube, means to admit fluid under-pressure beneath said slide to cause it to move upwardly in said tube, a pair of telescopic arms in spaced relation carried by said slide, each of said arms including a hollow lower section and an upper section, conduits establishing communication between said hollow lower sections and the underside of said slide whereby said fluid under-pressure is conducted to said hollow lower sections to cause extension of said telescopic poles, a toggle between said lower sections, a spring connecting the mid-point of said toggle to said slide, and a conical guide carried to the upper end of said tube and adapted to cooperate with said arms and toggle to cause said arms to assume a diverging relation in extended position.

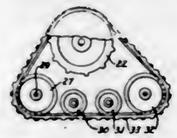
2,449,418
RUBBERY DIOLEFIN POLYMERS CONTAINING PROCESSING AIDS
William Henry Sharkey, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 13, 1945, Serial No. 616,151
10 Claims. (Cl. 260—30.8)



1. A composition of matter comprising a synthetic, rubbery, high molecular weight, conjugated diolefin polymer wherein the conjugated diolefin is present in major amount together with from 0.5 to 10%, by weight of said polymer, of an aliphatic alpha-(acylthio) carboxylic acid.

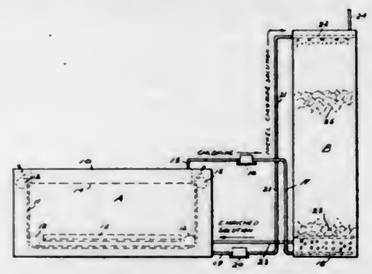
2,449,419
SAFETY LATCH
Aaron Shatkin, Matawan, N. J.
Application January 10, 1944, Serial No. 517,647
6 Claims. (Cl. 24—162)

1. In an article of the character described, a frame, a link, means on the frame holding said link in swingable and slidable relation to the frame, a pin pivotally secured at one of its ends to the link; the axes of rotation of the pin with respect to the link and of the link with respect to the frame being parallel, a member having a socket carried by the frame; the free end of the pin being adapted to be positioned within said socket; and an element carried by the frame in engagement with said link whereby the link is held against rotary movement and against sliding movement away from the socket; said link being adapted to be slid towards the socket until released from the engagement element and free for rotary movement about its axis on the frame; the pin, when its free end is within the socket, moving further into the socket during movement of the link away from the engagement element, and the pin becoming free of the socket, upon movement of the link about its axis on the frame in a direction away from said socket.



2,449,420
ELECTRODE SYSTEM
Paulus Antonius Wilhelmus Maria Sleegers, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee
Application September 20, 1945, Serial No. 617,579
In the Netherlands March 28, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 28, 1962
8 Claims. (Cl. 175—366)

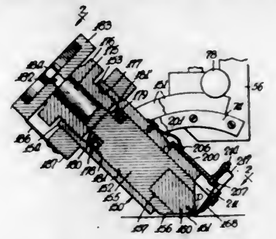
1. A blocking layer electrode system comprising a supporting base, a common electrode carried on said base, a blocking layer formed on said common electrode, a plurality of electrodes on said blocking layer and insulated each from one another by strips of said blocking layer, electrically conductive members interconnecting said electrodes, and a supporting layer of insulating material interposed between each of said conductive members and said blocking layer strips which insulate said electrodes one from the other.



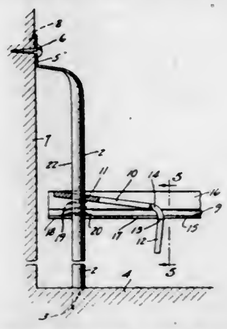
2,449,421
TRACK FOR VEHICLES
Charles O. Slemmons, Akron, and Robert W. Smith, Copley, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application July 30, 1945, Serial No. 607,690
3 Claims. (Cl. 305—10)

1. A track for a self-laying track type vehicle, said track comprising laterally spaced-apart flexible bands of rubber-like material, longitudinal flexible tension members embedded in each band, and cross-bars extending laterally between the bands at longitudinally spaced intervals providing sprocket-engaging portions intermediate said bands, said cross-bars each comprising a strip of metal having plain-faced portions extending

across the tension members of the bands between said tension members and the peripherally inner face of the track and having portions in the region of its ends bent outwardly beyond the tension members toward the tread face of the track and terminating in free ends within the rubber-like material of the bands.



2,449,422
ELECTRODEPOSITION OF NICKEL
Leslie N. Smith, Cleveland Heights, Ohio, assignor to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio
Application April 15, 1944, Serial No. 531,163
2 Claims. (Cl. 204—49)

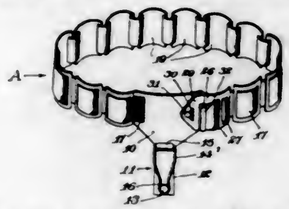


1. A plating process adapted for utilization of difficultly soluble masses of electrolytic nickel metal in electrodeposition of nickel comprising the steps of electrodepositing nickel from a body of acid nickel electrolyte containing nickel chloride whereby chlorine is evolved and the nickel chloride concentration of said electrolyte tends to be reduced and adding nickel chloride to said electrolyte to counteract the tendency to reduced concentration thereof by passing chlorine so evolved and electrolyte from said body of electrolyte containing nickel chloride equivalent to from 75 to 350 grams per liter of $NiCl_2 \cdot 6H_2O$ into simultaneous contact with masses of difficultly soluble electrolytic nickel whereby to dissolve nickel from such masses as nickel chloride and returning such electrolyte with its resulting increased nickel chloride content to said body of electrolyte.

2,449,423
BEZEL DOP AND GRINDING DEVICE
Josef Hillel Spira, New York, N. Y.
Application September 1, 1943, Serial No. 500,775
13 Claims. (Cl. 51—229)

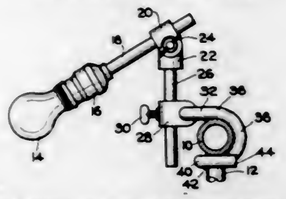
1. In a dop provided with means for rotationally mounting a gem with the girdle portion exposed, the combination comprising a girdle guide movable during rotation of the gem in accordance with any eccentric location thereof, a contact arranged to diametrically extend across said gem, said contact being mounted to move in synchronism with said guide whereby to gauge the distance for cutting a facet on said gem.

2,449,424
ADJUSTABLE FRICTION SUPPORTING DEVICE
Frank C. Stieber, Marathon, Wis.
Application November 25, 1946, Serial No. 712,103
7 Claims. (Cl. 248—295)



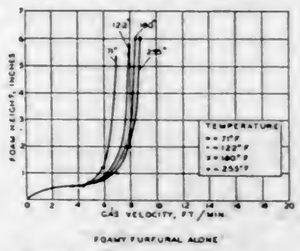
1. An adjustable support comprising a friction link having a post-receiving aperture adjacent one end and opposed laterally-projecting load-bearing tongues adjacent its other end, a supporting post extending through the aperture of the friction link and mounting said link for sliding movements thereon, and a beam having an aperture adjacent one end through which the tongue-equipped end of the friction link extends, portions of the beam adjacent opposite edges of the said beam aperture being seated upon the said load-bearing tongues of the friction link, said beam aperture being of sufficient length in a direction longitudinally of the friction link to receive the tongue-equipped end of the friction link when the friction link is turned approximately at right angles to its operative position.

2,449,425
GARTER
Philip J. Stieger, St. Paul, Minn.
Application January 5, 1946, Serial No. 639,382
1 Claim. (Cl. 2—314)



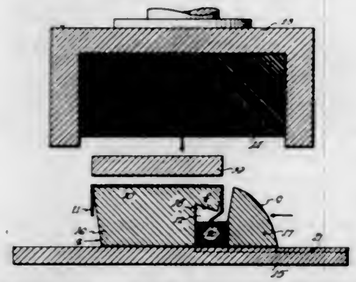
A garter comprising a flexible resilient band designed to encircle a limb, an arch of relatively rigid material having a radius of curvature substantially smaller than that of the limb mounted on said band, each arch having a pair of generally parallel slots at each end thereof, one of the slots of each pair communicating with one curved edge of the arch, and the other slot communicating with the opposite curved edge of

said arch, the band underlying the concave surface of said arch between the parallel ends of the arch and the outermost slots overlying the convex surface of the arch between the slots of



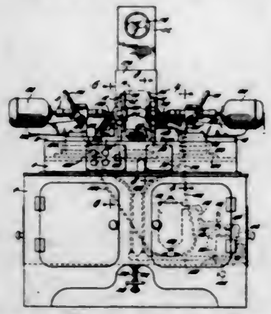
each pair, and underlying the arch between the innermost slots, said innermost slots being spaced sufficiently from the ends of the arch to space the portion of the band underlying the center of the arch from the surface of the limb.

2,449,426
SUPPORT FOR BED LAMPS
Carol L. Strauss, Bangor, Maine
Application June 7, 1945, Serial No. 597,986
2 Claims. (Cl. 248—230)



1. A bed lamp or the like comprising a bracket having a closed end and a pair of parallel legs, a lamp rod support on the closed end, a lamp rod longitudinally adjustable in the support, the latter being angularly adjustable on the closed end of said bracket, a pair of parallel hooks at the ends of the legs, and oppositely extending lateral projections at the ends of the hooks, the latter and projections forming continuations of the legs of the bracket.

2,449,427
FOAM PREVENTION IN EXTRACTIVE DISTILLATION OF HYDROCARBONS WITH FURFURAL SOLVENT
George Thodos and Charles F. Weinaug, Borger, Tex., assignors to Phillips Petroleum Company, a corporation of Delaware
Application July 28, 1944, Serial No. 547,078
4 Claims. (Cl. 202—39.5)

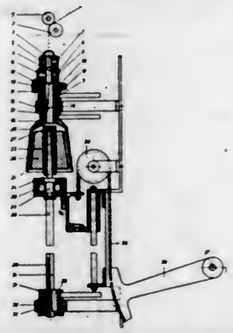


1. In the extractive distillation of hydrocarbons with furfural as a solvent wherein the furfural becomes contaminated with foam-producing substances, the improvement which comprises suppressing foaming by admixing with the furfural used as the solvent beeswax in amount which is substantially in excess of its solubility in said furfural.

2,449,428
DIE ASSEMBLY AND RUBBER INSERT FOR FLANGING SHEET METAL
Amieal A. Timmons, McKinney, Tex., assignor of ninety-eight per cent to Wayde Timmons, McKinney, Tex.
Application June 28, 1944, Serial No. 542,519
5 Claims. (Cl. 153—13)

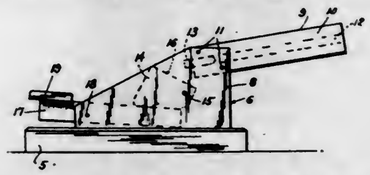
5. Complementary die elements for forming a return flange on a work sheet, in combination with the rubber platen of a hydraulic press, including a forming element of non-yielding material supporting the work and recessed at one end to define an overhanging ledge having an upwardly receding undersurface for underturning an end of the work in the primary operation of said platen, means composed of yieldable material insertable beneath the underturned end of said work preliminary to renewed operation of said platen, and means constrained by said platen in its secondary operation to advance laterally against said latter means to compress the same to fill the void below said ledge and exert pressure upwardly against the underturned end of said work counter to the operative pressure imposed by said platen to complete said flange.

2,449,429
BALANCING MACHINE
Thomas C. Van Degrift, Andrew W. Zmuda, and Earl F. Riopelle, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 8, 1943, Serial No. 513,420
10 Claims. (Cl. 77—21)



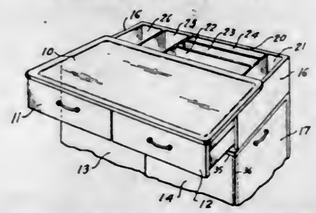
2. In a balancing machine, the combination of a pair of spaced supports adapted to receive the part to be balanced and permit rotation therefor, means at opposite ends of said part for removing material therefrom, a shiftable mounting for each of said means to permit it to be moved into and out of operative position, means for straddling the part and backing it up while material is being removed therefrom, a shiftable mounting for said last-named means to permit it to be moved into and out of operative position, and means for interconnecting the shiftable mounting for said first-named means and the shiftable mounting for said backing up means to cause said backing up means to move to operative position when said material removing means is moved to operative position.

2,449,430
COMB
August L. Voight, Berea, Ohio
Application May 3, 1947, Serial No. 745,748
5 Claims. (Cl. 132—24)



1. A comb comprising a body strip, a series of straight teeth extending from said strip, and a series of arcuate teeth extending from said strip substantially laterally of said series of straight teeth, the convex sides of said arcuate teeth being disposed toward the free ends of said straight teeth.

2,449,431
SPINNING MACHINE
Eduard Weiss, Brunn, Czechoslovakia
Application June 4, 1946, Serial No. 674,277
In Czechoslovakia September 9, 1945
5 Claims. (Cl. 57—74)

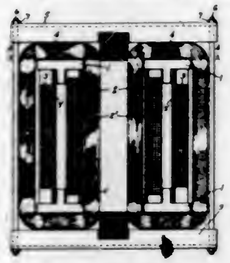


1. In a continuously operated spinning apparatus a pair of vertically superposed horizontal twisting rolls to receive a roving therebetween said roving passing to and from said rolls in a substantially vertical direction, means to rotate said rolls about their horizontal axes and simultaneously about the vertical feeding direction of the roving, a yarn-winding device located underneath said pair of rollers said device including a sleeve-supported tube to receive the yarn and a spindle carrying said tube, a bell downwardly extending from said lower twisting roll and rotatable therewith about said vertical feeding direction and encasing said yarn winding device to conduct the yarn from the twisting rolls onto said tube and means to rotate said spindle independently of the rotation of said bell.

2,449,432
TOY CANNON
Jonathan C. Wheeler, Dayton, Ohio
Application March 22, 1945, Serial No. 584,068
1 Claim. (Cl. 124—29)

A toy cannon comprising a base including a pair of upstanding spaced apart supports, a barrel secured to said supports and having a bore adapted to receive a missile in a position with one end of the missile projecting from the rear end of the barrel, a flat hammer pivoted at one end to said supports to swing one end upwardly about a horizontal axis to strike the missile, and a lever pivoted to the supports with one end underlying the hammer and adapted to swing said end of the hammer upwardly when a blow is struck upon the other end of the lever.

2,449,433
CABINET HAVING COMBINED SLIDABLE TOP AND DRAWERS
Juanita K. Wheelock, Pleasant Ridge, Mich.
Application November 29, 1944, Serial No. 565,595
3 Claims. (Cl. 312—150)

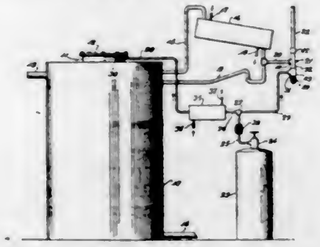


1. A kitchen utility cabinet comprising a supporting frame, a top wall, means on said top wall to form drawer slides, drawers hung from said means and slidable under the forward part of the top wall leaving free space below the top wall at the rear of the drawers, said top wall being slidable on said frame to a position forward of the frame, storage wells immediately below the rear portion of the top wall when it is in normal closing position and behind and at the level of the drawers, said wells being exposed when the top wall is shifted.

2,449,434
COMBINATION COIL SUPPORT AND SPACER
Lawrence C. Whitman, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application March 15, 1945, Serial No. 582,841
1 Claim. (Cl. 175—362)

In combination, with an induction apparatus having a pair of coaxial cylindrical coils on a central winding leg of a magnetic core which has a plurality of top and bottom yoke portions ex-

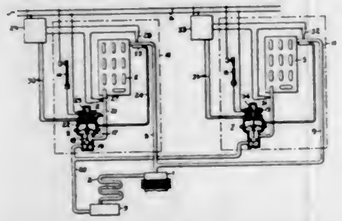
tending past the ends of said coils, of a plurality of T-shaped insulating members, the leg of each T-shaped member being inserted between said coils, the cross piece of each T-shaped member



being wedged between the ends of said coils and a different one of said yoke portions whereby said T-shaped members act as top and bottom supports for both coils and also act as spacers between said coils.

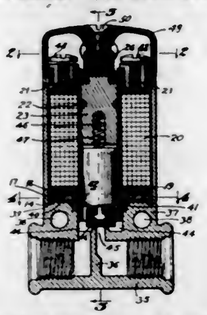
2,449,435
FORM SELECTOR FOR DENTURE PROSTHESIS
Winthrop C. Whittemore, Port Washington, N. Y., assignor to The Dentists' Supply Company of New York, New York, N. Y., a corporation of New York
Application February 1, 1946, Serial No. 644,866
9 Claims. (Cl. 32—71)

1. A form selector for denture prosthesis comprising a telescopic eye-piece, a transparency associated with the eye-piece having coordinate guide lines thereon, and an arm extending from the eye-piece substantially in the plane of the line of sight thereof for spacing the eye-piece from the face of a patient.



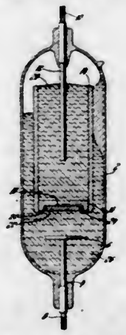
2,449,436
METHOD AND APPARATUS FOR PREVENTING EXPLOSIONS
Hilding V. Williamson, Chicago, Ill., assignor to Cardox Corporation, Chicago, Ill., a corporation of Illinois
Application June 9, 1945, Serial No. 598,566
10 Claims. (Cl. 169—1)

1. A method of preventing the development of a vapor and air explosive mixture during periods when a normally closed vapor confining container, having a vent to the atmosphere for excess vapor, is directly opened to the surrounding atmosphere, comprising maintaining a source of supply of an inert gas under pressure, and, during a period starting in advance of opening the container and continuing as long as the container is open, discharging a portion of said gas through the vapor vent of the container in suction producing relation to the latter to create and maintain a negative pressure therein, and simultaneously discharging additional gas across the container opening to form a curtain that will prevent the escape of vapor from the container through the opening and will dilute the vapor in the container to such an extent that an explosive mixture will not be formed in the container.



6. An explosion prevention system, comprising the combination with a vapor confining container having a manway opening normally closed by a cover that is removed periodically to open up the container to the atmosphere and having a vent line extending to the atmosphere for discharging excess vapor, of a source of supply of an inert gas under pressure, discharge piping for the gas having branches leading to the vapor vent line and to the manway opening, respectively, of the container, an aspirator connected to one of the branches and in the vapor vent line and operating when the manway cover is removed to create a suction in the vent line for withdrawing vapor from the container to produce a negative pressure in the latter, a valve normally closing the gas discharge opening of the aspirator, means operated by the delivery of gas to the aspirator for opening said valve, means connected to the other branch for discharging gas into the uncovered manway so that the gas will be drawn into the container as a result of the negative pressure in the latter, and control means in the discharge piping for simultaneously starting and stopping the flow of gas through both branches.

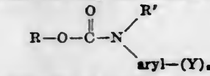
2,449,437
SUPERHEAT CONTROL FOR REFRIGERATING APPARATUS
Clark E. Winchester, Roanoke, Ind., and Harold F. Lathrop, Philadelphia, Pa., assignors to General Electric Company, a corporation of New York
Application May 27, 1947, Serial No. 750,712
6 Claims. (Cl. 62—8)



1. In a refrigerating apparatus including an evaporator and means for supplying liquid refrigerant thereto and for withdrawing vaporized refrigerant therefrom, a thermostatic expansion valve including actuating means dependent upon the superheat of the vaporized refrigerant for controlling the admission of liquid refrigerant to said evaporator, means responsive to the temperatures at the inlet and outlet of said evaporator for producing an electric voltage proportional to the difference between the inlet and outlet temperatures, and means dependent upon said voltage for applying a boosting force to said actuating means.

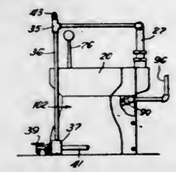
2,449,438
SOLENOID WITH PLUNGER
Orton H. Wisegarver, Los Angeles, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application July 25, 1944, Serial No. 546,541
6 Claims. (Cl. 175—341)

1. In solenoid construction, a cylinder open at one end, an attaching member rotatably confined therein for attaching the solenoid to another member, a compression member bearing against said attaching member, a solenoid spool, with winding and terminals, fitted within said cylinder and bearing against said compression member, and means closing the other end of said cylinder with compression upon said solenoid spool and said compression member, whereby said solenoid can be rotatively adjusted relative to said attaching member.



2,449,439
MERCURY INTERRUPTER
Leonard M. Wittlinger, Linden, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 1, 1946, Serial No. 707,159
1 Claim. (Cl. 200—113)

In a current interrupter, a casing formed of insulating material, a pair of electrodes mounted in spaced relation in said casing, baffle means of nonconducting material in said casing between the electrodes dividing said interior into a pair of chambers, a conductive pool of mercury in each chamber, said baffle having an aperture therein, insulating means mounted in said aperture and having concentric joining openings of different diameter extending partially through the same, a thin flat carbon member mounted in the larger opening to thus present two different surface areas to the two chambers and the conductive mercury pools partially filling each chamber.

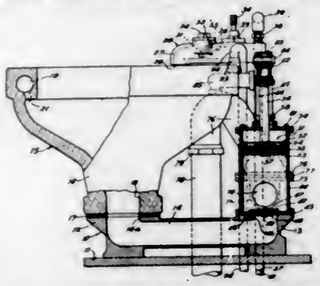


2,449,440
ARYL ESTERS OF TERTIARY CARBAMIC ACID
John A. Aeschlimann, Montclair, N. J., assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application June 25, 1946, Serial No. 679,266
11 Claims. (Cl. 260—471)

1. Carbamic esters of phenols containing a tertiary amino group and a substituted aryl group, said compound having the following formula:

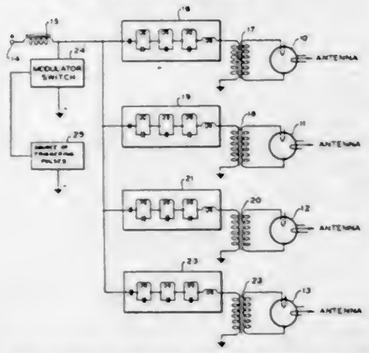
R being a member of the group consisting of a phenyl radical with a dialkyl amino group, a phenyl radical with a dialkyl amino alkyl group, and a benzoheterocyclic radical, R′ being a member of the group consisting of a lower alkyl, aralkyl and aryl radical, Y being a member of the group consisting of a halogen, a lower alkyl and an alkoxy radical, n being a small whole number from 1 to 5, and Y being the same or different when n is more than one, and the quaternary salts thereof.

2,449,441
TOILET
Arthur G. Agra, Chicago, Ill.
Application September 8, 1947, Serial No. 772,709
5 Claims. (Cl. 4—76)



1. In a toilet for automobile house trailers and the like, a base structure comprising a cylinder closed at its bottom, a bowl seating on said base structure discharging into said cylinder, a normally closed downwardly opening and upwardly closing valve controlling communication between said bowl and cylinder, a piston operating in said cylinder, said structure having a projection extending to one side of said cylinder provided with two outlet passages opening at their outer ends through said projection and at their inner ends into said cylinder adjacent and remote from the bottom thereof respectively, normally closed outwardly opening and inwardly closing valves respectively controlling the outer ends of said passages, and a discharge conduit comprising a hood secured to said projection enclosing the outer ends of said passages.

2,449,442
TRAILER TOILET
Arthur G. Agra, Chicago, Ill.
Application October 4, 1947, Serial No. 777,926
5 Claims. (Cl. 4—77)



1. In a toilet for automobile house trailers, and the like, a base structure, a bowl and a substantially vertical cylinder carried by said base structure in spaced relationship, said base structure having a bore communicating with said bowl and cylinder, a normally closed upwardly opening and downwardly closing valve controlling communication between said bowl and cylinder, a piston operating in said cylinder, the cylinder having two outlet passages opening thereinto one adjacent and one remote from the bottom of the

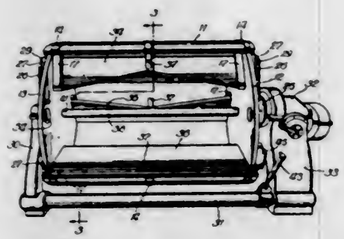
cylinder, a normally closed upwardly opening and downwardly closing valve controlling the lower one of said outlet passages, and an outwardly closing and inwardly opening suction responsive

valve associated with the other of said outlet passages effective for admitting air thereto responsive to creation of a partial vacuum in said cylinder above said piston.

2,449,443
LINE PULSE MODULATOR FOR MULTI-CHANNEL TRANSMITTERS
Philip C. Bettler, Boston, and Howard D. Doolittle, Cambridge, Mass., assignors, by mesne assignments, to the Government of the United States of America as represented by the Secretary of War
Application February 3, 1945, Serial No. 576,114
4 Claims. (Cl. 250—17)

1. In a multi-channel pulse transmitter, a plurality of magnetrons, a corresponding plurality of pulse-forming networks, each of said networks being coupled to its respective magnetron, means for charging in parallel said plurality of networks, and means for periodically and simultaneously discharging said plurality of networks to deliver a pulse of energy from the respective network to the magnetron coupled to said network.

2,449,444
SELENIUM RECTIFIER
Wayne E. Blackburn, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 30, 1946, Serial No. 706,758
4 Claims. (Cl. 175—366)



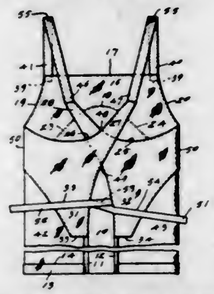
1. The method of producing a selenium rectifier which comprises the step of coating a free surface of selenium with a suspension of magnesium thiosulfate in a volatile organic solvent.

2,449,445
FLUSH TANK DRIP PAN
Herman Bodan, Milwaukee, Wis.
Application August 18, 1944, Serial No. 550,003
1 Claim. (Cl. 4—252)

For use with a toilet bowl flush tank, provided with spaced apart threaded intake and discharge pipes; a drip-pan therefor having its bottom provided with upset apertured pad areas about the pipes to space the pan bottom from the flush tank bottom and also to prevent leakage at the pipe joints, retaining nuts in threaded union with the pipes for clamping the upset pad areas of the drip-pan against the bottom of the tank, an upturned flange extending from the bottom edge of the drip-pan, spaced from the flush tank walls, a drain gutter extending about the drip-pan edge flanges below the pan bottom, and a fluid collecting pocket formed in the drip-pan bottom at a lower level than the pan gutter and communicating with the same for drainage, whereby condensation traveling about the gutter will be collected in said pocket for discharge into the bowl.

2,449,446
CHURN SUPPORT
Arthur H. Boileau, Cedar Rapids, Iowa, assignor to Cherry-Burrell Corporation, Wilmington, Del., a corporation
Original application January 3, 1939, Serial No. 249,056. Divided and this application February 24, 1944, Serial No. 523,754
5 Claims. (Cl. 259—81)

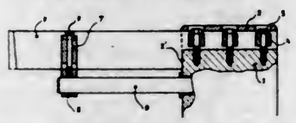
1. A device of the class described comprising a cylinder, cylinder heads for said cylinder, rotatable supports for rotatably supporting said cylinder and said cylinder heads, a shelf within said cylinder, and bracket means common to said shelf and said cylinder heads for supporting said shelf within said cylinder and for supporting said cylinder heads upon said supports, whereby said shelf may be readily removed from said bracket means without dismantling said cylinder.



2,449,447
PREPARATION OF ETHER ESTERS
Richard E. Brooks, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 13, 1946, Serial No. 696,935
4 Claims. (Cl. 260—484)

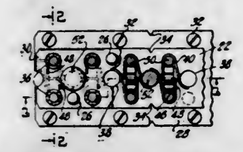
1. A process for the preparation of an ester of a 3,4-dialkoxybutyric acid which comprises passing ketene into a 1,1,2-trialkoxyethane having no ketene reacting substituent containing an acid catalyst whereby an ester of a 3,4-dialkoxybutyric acid is formed, the 1,1,2-trialkoxyethane having the structural formula:

$$ROCH_2CH(OR)_2$$



in which R designates similar alkyl groups.

2,449,448
APRON
Henry L. Brown, Seattle, Wash.
Application May 28, 1946, Serial No. 672,824
1 Claim. (Cl. 2—48)



An apron comprising a folded fabric body, the upper outer corners of said body being cut to form concave edges defining arm pit portions, said body including a pair of oppositely inclined integral strips extending upwardly and outwardly from said arm pit portions and adapted to be disposed in crossed relation at the back of the wearer, a yoke stitched to the upper portion of said body, said yoke having a V-shaped cut-out in the lower front portion thereof, said yoke also including a pair of oppositely inclined strips stitched to said first named strips and a pair of downward tapering extensions, a pair of shoulder straps secured to said yoke and to the upper ends of said strips, and a pair of tapes secured to the rear edges of said body.

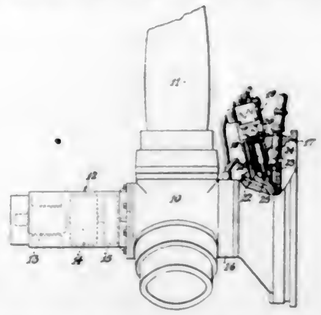
2,449,449
MILLING MACHINE
Ettore Bugatti, Paris, France
Application September 18, 1945, Serial No. 617,110
In France May 7, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires May 7, 1962
6 Claims. (Cl. 90—20.5)

1. In a milling machine, the combination of a frame portion; a removable cap secured to said frame portion, on the top surface thereof, said frame portion and cap defining between them a prismatic recess; an over-arm including a prismatic inner portion provided with a lengthwise slot fitted in said recess; and means located at least partly in the slot for expanding said over-arm inner portion.

2,449,450
ELECTRICAL CONNECTOR
Vernon E. Carlson, Short Hills, N. J., assignor to Aircraft-Marine Products, Inc., Elizabeth, N. J., a corporation of New Jersey
Application April 3, 1943, Serial No. 481,667
8 Claims. (Cl. 173—334)

1. An electrical conductor comprising an insulating body, a bus of high conductivity metal, said body surrounding said bus, said bus having a plurality of contact faces, and integral projections of the bus connecting the bus and insulating body closely adjacent at least two of the contact faces so that those faces are fixed relative to the body, at least one face of said bus being remote from the integral projections and being resiliently connected to the other faces by a bend, said body having access apertures registering with each of said faces.

2,449,451
HIGH-FREQUENCY DIELECTRIC HEATING APPARATUS
Benedict Cassen, Los Angeles, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 28, 1944, Serial No. 556,148
4 Claims. (Cl. 219—47)

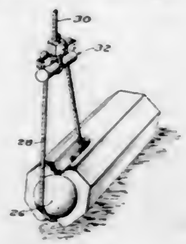


2. Dielectric heating apparatus comprising a pair of relatively large spaced electrodes for heating a dielectric material therebetween, a source of high-frequency electrical energy adapted to establish a non-flat wave pattern along said electrodes, a transmission line connecting said source of energy to said electrodes, a resonant chamber connected to said electrodes at a point removed from said transmission line, and means for cyclically continually changing the electrical characteristics of said chamber during a heating operation.

2,449,452
PROPELLER GOVERNOR
Charles W. Chillson, Clifton, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application March 15, 1939, Serial No. 261,879
13 Claims. (Cl. 170—163)

1. In a governor system for an aircraft power plant including an engine and a controllable pitch propeller driven thereby, electric motor means for changing the propeller pitch, a reciprocable

switch member driven by the power plant, a second switch member engageable with the first, means to control the position of said second member in proportion to engine speed, said members

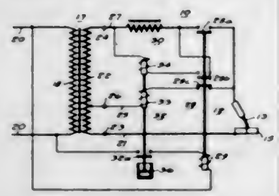


being thereby contactable for longer or shorter dwell upon reciprocation of the first member according to the speed responsive position of said second member, and control connections from said switch members to said electric motor.

2,449,453
COPPER OXIDE RECTIFIER
Richard H. Clapp, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application December 31, 1946, Serial No. 719,610
2 Claims. (Cl. 175—366)

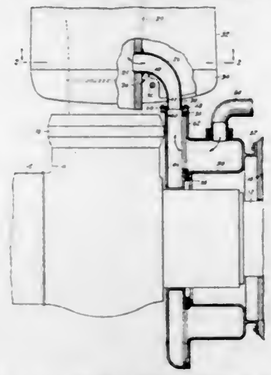
1. The method of making a copper oxide rectifier blank which comprises dishing a copper blank to form having a convex and a concave side, oxidizing said blank on the convex side at high temperature, and compressing it to a final flat form.

2,449,454
DROP HAMMER
Theodore C. Cooke, Swampscott, Mass.
Application January 25, 1947, Serial No. 724,375
2 Claims. (Cl. 241—291)



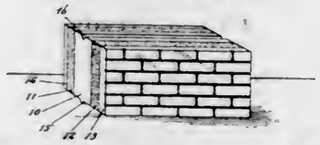
1. A drop hammer for quarrying and other breaking operations having a central body, a bottom portion with a working bottom face and a top portion having a smooth rounded transverse opening extending therethrough for the reception of a hoisting cable hitch, a pair of external parallel smooth grooves curving and gradually merging with the exterior surfaces of the hammer by convexly curved portions, said opening at either end thereof having convexly curved portions which gradually merge with said grooves to provide a smooth curving contacting surface for a hoisting cable hitch, said top portion having a substantially spherically surfaced button extending beyond said grooves providing, in cross section through said grooves, with said open portions of said grooves a substantially semicircular configuration.

2,449,455
ADAPTER FOR SPOT WELDING MACHINES
Ernest Crabtree, Toronto, Ontario, Canada
Application January 2, 1947, Serial No. 719,709
6 Claims. (Cl. 219—4)



1. An adapter for spot welding machines comprising a body having a clamp designed to fasten on an electrode arm of a conventional machine, disc means rotatably mounted in said body, an electrode holder mountable in said disc means and designed to support a welding electrode, said discs being rotatable to dispose said holder at an angle to the axis of said body and said holder being mounted in said discs to dispose the welding electrode at a predetermined distance from the adjacent portions of the body and the discs, and means in connection with the body whereby said discs and said holder are fixed in positions of adjustment.

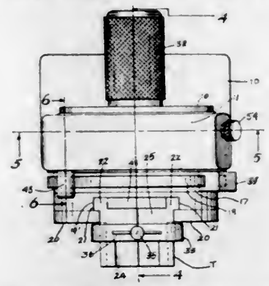
2,449,456
ARC WELDING CONTROL SYSTEM
Charles P. Croco, Buffalo, N. Y., and John H. Blankenbuehler, Troy, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 26, 1946, Serial No. 718,558
8 Claims. (Cl. 315—246)



1. In an arc welding system, an arc welding circuit including an electrode and work upon which a welding operation is to be performed, a line switch normally connecting the welding circuit to a reduced voltage source and energizable to connect said welding circuit to a source of arc welding voltage, and switch means connected to be operable upon engagement of the electrode and work to energize the line switch, said switch means being reconnected by the line switch to maintain the switch means energized.

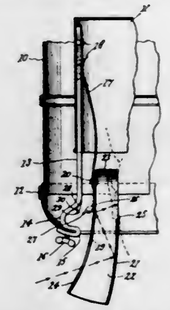
2,449,457
DEICING SYSTEM FOR PROPELLER BLADES
George A. Dean, Radburn, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application May 25, 1946, Serial No. 672,295
7 Claims. (Cl. 244—134)

1. In a controllable pitch propeller having a hollow blade, a transfer chamber on the hub, means to feed a hot gaseous medium to said chamber, and means to conduct hot gaseous medium from said chamber to said blade, said conducting means comprising an arcuate slip joint concentric with the blade axis of rotation in the hub and having the relatively slipping members of the joint in communication with the hollow of said blade and with the interior of said chamber.



2,449,458
GLASS BUILDING BLOCK
Nathaniel C. Dryden, Poughkeepsie, N. Y.
Application April 26, 1946, Serial No. 665,150
2 Claims. (Cl. 72—36)

1. A glass building block comprising a central body of solid glass extending to the ends and to the top and bottom of the block, a mass of foam glass on each side of that body and a veneer of solid glass covering the side of one foam glass component and forming an outside wall surface, all of said components being united in an integral whole.

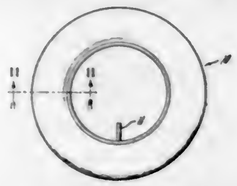


2,449,459
PERFORATOR GRINDING FIXTURE
Theodore Eckert, Lincolnwood, Ill., assignor to Harig Manufacturing Company, Chicago, Ill.
Application March 30, 1946, Serial No. 658,529
2 Claims. (Cl. 51—217)

1. A perforator grinding fixture including a base plate for mounting the fixture on the table of a grinding machine, a mounting plate extending upwardly from the base plate and having a transverse opening formed therein, an index plate rotatably mounted in said opening, a face plate secured to said index plate, a back plate secured to said index plate, a work holder adjustable relative to said face plate, a handle on the back plate for rotating said index plate and said work holder about an axis transversely of said mounting plate, means for limiting the degree of rotation of said index plate and said work holder,

said last-named means including limiting blocks adjustably carried by the face plate and a blocking pin movably carried by the mounting plate and movable into the path of movement of said limiting blocks.

2,449,460
HEARING AID AND HEAT DEFLECTOR FOR HAIR DRIERS
Geraldine Katharine Edwards, Napoleon, and Martin Henry Zachrich, Defiance, Ohio
Application December 12, 1946, Serial No. 715,658
4 Claims. (Cl. 34—90)

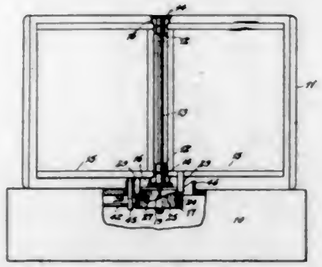


1. For use with a hair drier bell or the like, a hearing aid and heat deflector comprising a support mounted within said bell, an ear shell resiliently carried by said support biased by spring pressure against the head of the patron, said ear shell having communication externally of the bell, a spring catch element carried by said shell, and a striker element forming an interlocking couple with said spring catch element and supported from the bell and constructed and arranged for interlocking engagement by the spring catch element when the ear shell is moved to an outer position away from the ear.

2,449,461
TIRE CURING BAG
Daniel R. Elliott and Knowles K. Madison, Detroit, Mich., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application March 20, 1946, Serial No. 655,902
3 Claims. (Cl. 18—45)

1. A curing bag capable of giving good service in vulcanizing pneumatic tire casings, said bag

being formed of a composition comprising a rubber stock having incorporated throughout the stock from 30 to 75 parts by weight, based on



the weight of the rubber stock, of acetylene carbon black to increase the thermal conductivity of the bag so that heat will be conducted quickly through its walls to the tire casing.

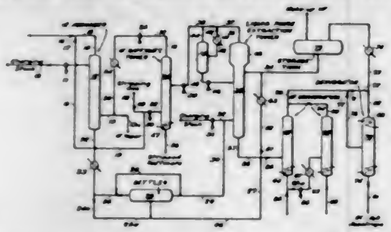
2,449,462

DISPLAY DEVICE EMBODYING HINGED OR PIVOTED MEMBERS SIMULATING BOOK LEAVES

Adolph C. Erisman, Port Richmond, N. Y., assignor to Lina Kushner, doing business as the Metropolitan Mechanical Display Company, New York, N. Y.

Application February 16, 1945, Serial No. 578,205
9 Claims. (Cl. 40—104)

1. In a display device, a plurality of book leaf simulating members, a single rotatably supported actuating cam for said members, means individually mounting said members at their inner edges in parallel relation to the cam axis for pivotal movement and for bodily movement relative to each other from one to the other side of the axis of said cam, a cam engaging part on each of said members, and additional means for imparting relative bodily movement between said members and cam axially of the latter to position said parts relative to the cam and cause said cam by rotary movement thereof to effectively engage said parts in succession and singly turn said members from one side of the cam axis to the other.



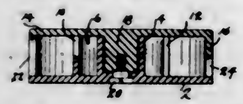
2,449,463

HYDROCARBON CONVERSION PROCESS

Bernard L. Evering, Chicago, Ill., and Arthur P. Lien, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application June 29, 1945, Serial No. 602,228
8 Claims. (Cl. 196—13)

1. A hydrocarbon treating process which comprises in sequence, contacting hydrocarbons under treating conditions with liquid hydrogen fluoride, separating partially spent liquid hydrogen fluoride and a hydrocarbon product containing a small proportion of dissolved hydrogen fluoride from said treating process, vaporizing dissolved hydrogen fluoride from said hydrocarbon product, absorbing the resultant hydrogen fluoride vapor in



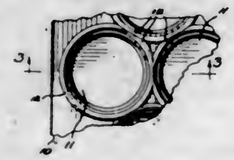
a hydrocarbon charging stock containing a substance capable of forming a complex with hydrogen fluoride and thereafter separating a hydrogen fluoride complex from the hydrocarbon charging stock and passing the hydrocarbon charging stock to the treating process.

2,449,464

CORD ADJUSTING AND STORAGE DEVICE

George W. Eypper, Montclair, N. J.

Application October 8, 1947, Serial No. 778,523
3 Claims. (Cl. 24—71.2)



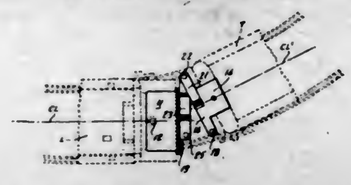
1. In an article of the class described a cord-storage spool comprising in combination an end flange, a hollow boss on the inner face thereof extending axially of the spool, a tubular member on the inner face of said flange surrounding and spaced from said boss, spaced, cord-receiving slots in said tubular member, these slots being open-ended at the free end of the tubular member, a cover member having an integral peripheral flange constituting cover side walls, cord-receiving slots in said peripheral flange open-ended at the flange edge, a boss on the inner face of the cover member adapted to extend into the hollow boss of the spool whereby, with the cover boss inserted in the spool boss and a cord lying in said slots and projecting to the cover exterior, relative rotation of the spool and cover will draw the projecting portions of the cord into the cover and wrap the same about the tubular member of the spool.

2,449,465

FLOOR MAT

Jacob E. Flaker, Barberton, Ohio

Application September 23, 1946, Serial No. 698,636
4 Claims. (Cl. 15—215)



1. A floor mat, comprising a relatively thin one-piece pad composed of resilient material, said pad having a honeycomb of recesses extending inwardly of one broad lateral face thereof, said recesses having generally arcuate inner wall surfaces, said recesses being closely spaced and arranged to have a general pattern in which groups of at least three immediately adjacent recesses of the pattern define a distinct substantially solid portion bounded by a corresponding number of arcuate wall surface portions of the adjacent recesses and being of approximately the thickness of the pad and a plurality of which will support the weight of a person standing on the pad without substantial flexing of said solid portions, the portions of said pad between any two of the immediately adjacent recesses being relatively thin and flexible as compared with said solid portions and thereby adapted to flex upon wiping of feet on the pad.

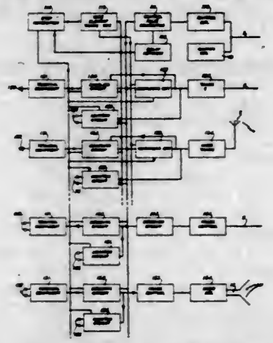
2,449,466

COUPLING DEVICE FOR USE IN TOY RAILROADS

Abram Dale Gash, Jr., Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y., a corporation of New York

Application April 18, 1945, Serial No. 588,947
9 Claims. (Cl. 213—75)

2. A toy railroad vehicle having a transversely extending upwardly opening channel shaped member at one end, and a second toy railroad vehicle having a member carried thereby at one end having a fin adapted to enter the channel shaped member from above when the vehicles are on the usual track and to slide along the channel to accommodate for horizontal disalignment of the vehicles, and means for so connecting the fin member and second vehicle together that the fin member can swing about either of two fixed vertical pivots disposed on opposite sides of the center line of the said second vehicle, the fin being slidable in the channel as the vehicles traverse curved track.



2,449,467

COMMUNICATION SYSTEM EMPLOYING PULSE CODE MODULATION

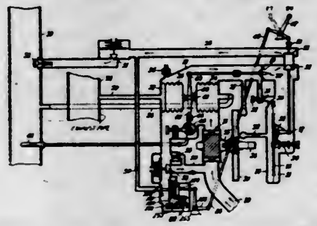
William M. Goodall, Oakhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application September 16, 1944, Serial No. 554,495
26 Claims. (Cl. 179—1.5)

4. Electrical apparatus for transmitting a permutatively coded series of conditions representing a sample of a signal wave in which each element of the series comprises a pulse or no pulse which comprises a control pulse generator, means operated incident to each cycle of the control pulse generator for producing a series of positive pulses equal in number to the number of units of the code and a corresponding series of negative pulses interspersed between said positive pulses, electronic apparatus responsive to said negative pulses for generating a step-wave form of potential each step of which is one-half the previous step and is initiated by each of said series of pulses, means operative in response to each of said positive timing pulses for comparing said sample with the amplitude of said stepped-wave form at that instant of time and transmitting a pulse

when the sample exceeds the amplitude of the stepped-wave form, and electronic apparatus operative incident to the transmission of a pulse for subtracting from said quantity an amount equal to

$$\frac{1}{2^n}$$



of the maximum possible quantity, and apparatus for thereafter comparing and controlling the remainder of said quantity with the succeeding steps of said wave form in a similar manner.

2,449,468

FUEL INJECTION SYSTEM FOR INTERNAL-COMBUSTION ENGINES

Leonard Sidney Greenland, Weston-super-Mare, England, assignor to H. M. Hobson Limited, London, England, a company of Great Britain

Application December 29, 1945, Serial No. 638,129
In Great Britain February 12, 1945
4 Claims. (Cl. 123—119)

1. In a fuel injection system for an internal combustion engine, the combination of an engine driven fuel pump, an engine driven centrifugal impeller, a metering unit, and means for supplying fuel from the fuel pump to the metering unit, said metering unit comprising, within an enclosing housing, a variable area fuel metering orifice, means for varying the area of said orifice as a desired function of boost pressure and means controlled by said impeller for establishing across the metering orifice a metering pressure which is some fraction of the pressure difference developed by said impeller, characterised in that said fuel pump and impeller are built into the housing of the metering unit and in that a readily detachable drive connection is provided between said pump and said impeller

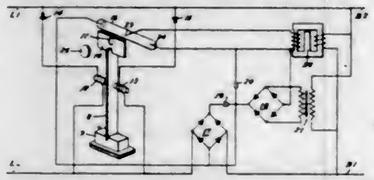
which permits of removal of said pump from said housing without disturbing said impeller and the means controlled thereby for establishing said metering pressure.

2,449,469
PREPARATION OF POLYFORMALS
William F. Gresham, Lindamere, and Richard E. Brooks, Edgemoor Terrace, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 2, 1944, Serial No. 561,640
10 Claims. (Cl. 260—615)

1. A process for the preparation of polyformals which comprises heating a dialkyl formal of the formula, $ROCH_2OR$, in which R is an alkyl group having from 1 to 4 carbon atoms, with formaldehyde at a temperature in the range of about 20° to 150° C. the initial molar ratio of dialkyl formal to formaldehyde being from 1:1 to 10:1 in the presence of an acid-reacting catalyst, continuing the resultant reaction until a reaction mixture approximating equilibrium is obtained, thereupon destroying the said acid reacting catalyst by addition of alkali and distilling from the reaction product polyformals of the formula,

$$RO(CH_2O)_nR$$

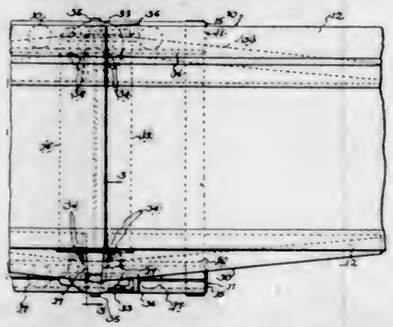
in which R is an alkyl group having from 1 to 4 carbon atoms and n is an integer from 2 to 4.



2,449,470
SYNTHESIS OF ORGANIC OXYGEN-CONTAINING COMPOUNDS
William F. Gresham and Richard E. Brooks, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 28, 1946, Serial No. 680,072
7 Claims. (Cl. 260—615)

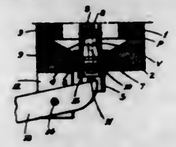
1. The process for the synthesis of 1,1,2-trialkoxyethanes which comprises heating a dialkyl formal with carbon monoxide and hydrogen in the presence of an alkanol at a temperature within the range of 100° to 350° C. under a pressure of at least 10 atmospheres in the presence of a catalyst comprising a member of the class consisting of nickel and cobalt, and thereafter separating from the resulting reaction product the 1,1,2-trialkoxyethane produced by the said reaction.

2,449,471
PREPARATION OF ETHER ESTERS
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 1, 1946, Serial No. 707,339
3 Claims. (Cl. 260—484)



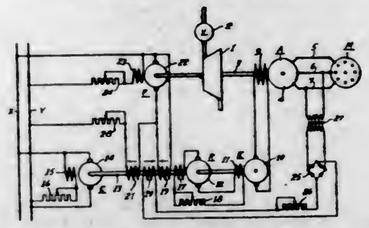
1. A process for the preparation of a 3,3-dialkoxy propionic acid ester which comprises bubbling ketene vapors into a mixture of an alkyl ortho-formate and an acid catalyst, alkyl ortho-formate having the structural formula: $(RO)_3CH$ in which R designates similar alkyl groups, the reaction being initiated at a temperature of about 0° C., continuing the reaction until no more ketene is absorbed, neutralizing the catalyst and thereafter removing the 3,3-dialkoxy propionic acid ester from the reaction mixture by distillation.

2,449,472
POLARIZED REED DEVICE
Finn H. Gulliksen, deceased, late of Oslo, Norway, by Gunvald Gulliksen, administrator, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application September 7, 1939, Serial No. 293,724. Divided and this application November 9, 1943, Serial No. 509,642
5 Claims. (Cl. 172—245)



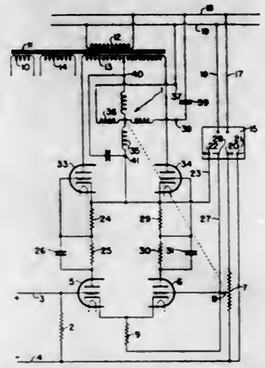
1. In a polarized electrical instrument for indicating the relationship of electrical characteristics of a pair of alternating current circuits, the combination of, a strip-like member of magnetic material having a fixed end and a free end which is adapted for vibration, electromagnetic means for effecting vibration of said strip-like member upon energization thereof, means for supplying alternating current to said electromagnetic means from one of said alternating current circuits whereby the strip-like member vibrates at a frequency corresponding to that of the energizing alternating current, rectifier means for polarizing the electromagnetic means with respect to the energizing alternating current, a grid controlled glow discharge lamp having an anode, a cathode and a grid, means for energizing the anode, an electrical impulse transformer having primary and secondary windings, means for supplying alternating current to said primary winding from the other of said pair of electrical circuits, circuit means connecting said secondary winding to said grid for controlling said lamp for periodic illumination, and an apertured member secured to the vibrating end of said strip-like member and located adjacent said lamp.

2,449,473
CONNECTING MEANS FOR SHAKER CONVEYER TROUGHS
Loy D. Hagenbook, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application May 3, 1946, Serial No. 666,917
9 Claims. (Cl. 198—220)



1. In a connecting means for adjacent ends of the troughs of a shaker conveyor, an abutment member projecting laterally from one end of one trough, an abutment member projecting laterally from an adjacent end of a next adjacent trough, a trough supporting lug adapted to be mounted on a reciprocating support for said troughs and having opposite faces adapted to be abutted by said abutment members, said abutment members having outer plane faces inclined so as to approach each other as they extend outwardly from said troughs, a C-clamp adapted to engage outer faces of said abutment members and to be moved into engagement therewith from the outside thereof, and an engaging member having engagement with said lug and said C-clamp, for moving said C-clamp inwardly along said abutment members and positively engaging the inner faces of said abutment members with said lug and for locking said C-clamp into engagement with said abutment members.

2,449,474
AUTOMATIC WATER VALVE
Elmer L. Halverson, Sacramento, Calif.
Application February 23, 1945, Serial No. 579,413
1 Claim. (Cl. 137—104)

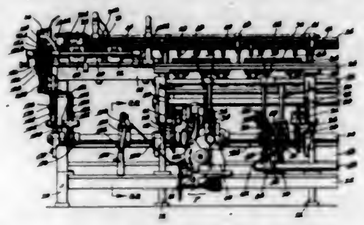


An article of manufacture comprising a threaded cap for threading onto a standard pipe end, a threaded orifice tapped through the bottom of the cap, a self-contained valve, such valve including a substantially cylindrical casing, a projecting flange on the casing intermediate its ends, threads on the casing below the flange such threads being threaded through the threaded orifice in the cap with the outer end of the casing projecting outside the bottom of the cap, the flange engaging the inner face of the bottom of the cap about the threaded orifice to fix the position of the casing outside the bottom of the cap, removable valve mechanism within the casing including a stem projecting to a point outside the bottom of the cap, and a float controlled lever finger pivoted on the cap and engageable with the valve stem.

2,449,475
REGULATING SYSTEM
Walter R. Harris, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 7, 1944, Serial No. 552,993
11 Claims. (Cl. 322—23)

1. An electric power system comprising a variable speed alternator disposed for feeding a load circuit and having a field winding, direct-current exciting means connected to said field winding and including a regulating generator having a voltage-sustaining self-excited field winding free from series connection with said first-named field winding, and also having two mutually opposing and balanceable field windings, circuit means controlled by said alternator and connected to one of said opposing windings for exciting it in dependence upon the alternator frequency, and circuit means controlled by said alternator and connected to said other opposing field winding for exciting it in dependence upon the alternator voltage so as to maintain the volts per cycle of said load circuit at a substantially constant value.

2,449,476
ANTIHUNT ELECTRICAL SERVOMOTOR SYSTEM
Thomas R. Harrison, Wyncote, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Original application March 25, 1944, Serial No. 528,088. Divided and this application May 1, 1947, Serial No. 745,308
4 Claims. (Cl. 318—207)



1. Means to control the operation of a reversible electrical motor for rotation in one direction or the other including terminals to which an alternating current supply source providing alternating current of predetermined frequency is adapted to be connected, a pair of electronic valves having normally equally conductive output circuits connected in opposite phase relation to said alternating current supply source and having input circuits to which a variable unidirectional voltage is coupled to increase the conductivity of one of said valves above that of the other of said valves, means to couple said unidirectional voltage to said input circuits, said coupling means including electrical reactance means operative upon decrease in said unidirectional controlling voltage to restore equality in the conductivities of said valves before said controlling voltage is reduced to zero, and an alternating current motor having a winding coupled to said output circuits and a winding connected to said terminals.

2,449,477
KNITTING OF SHAPED FABRICS
Joseph Held, West Reading, and Herman Scheer, Stroudsburg, Pa., assignors to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application April 4, 1942, Serial No. 437,714
44 Claims. (Cl. 66—89)

1. A mechanism for controlling the width of fabric made on a straight knitting machine com-

prising a spindle having oppositely threaded portions with nuts threaded one on each portion, a pair of combs operated by said spindle, and connections between said nuts and said combs for

moving said combs responsive to movements of the nuts including means for adjusting the distance between said nuts and said combs under loop transferring conditions.

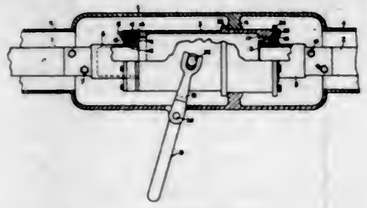
2,449,478

METHOD OF SEALING ONE END OF OPEN ENDED TUBE, FILLING THROUGH REMAINING OPEN END, AND SEALING REMAINING OPEN END

Carl Herzog, Belleville, N. J.

Application February 14, 1945, Serial No. 577,749
2 Claims. (Cl. 226—19)

2. The method of filling and sealing glass tubes which are originally open at both ends, comprising holding a plurality of glass tubes open at both ends in spaced relation and generally vertical by inserting the same in spaced openings of a first holder, applying heat to the upper ends of the glass tubes while they are within the holder to plasticize the same, pinch closing the upper plasticized ends of the tubes, applying a second holder having spaced openings to receive the tubes to the upper pinch closed ends of the tubes after such pinch closed ends having sufficiently cooled, inverting the two holders applied to the tubes as a unit, removing the then upper holder for uncovering the upper open ends of the tubes, introducing material into the upper open ends of the tubes, heating the then upper ends of the tubes to plasticize the same, pinch closing the plasticized upper ends of the tubes, and then removing the tubes from the remaining holder.



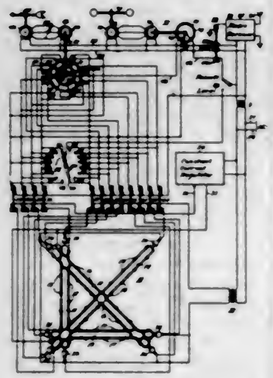
2,449,479

ELECTRICAL CONTACTS

Stanley David Hopper and Ernst Heinrich Hermann Hassler, Stafford, England, assignors to The English Electric Company Limited, London, England, a British company

Application November 19, 1945, Serial No. 629,659
In Great Britain November 28, 1944
7 Claims. (Cl. 200—163)

1. A disconnect switch comprising an inner contact member, an outer enveloping contact member, said contact members being axially movable relative to each other and having a radial clearance space between them, a helically coiled conductor disposed in said clearance space, the individual turns of said conductor being of greater diameter than said clearance space and tilted obliquely thereacross by contact with opposing



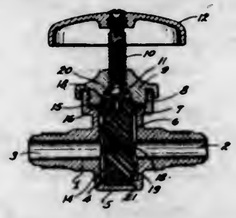
faces of said contact members, axially opposed faces on one of said contact members between which said conductor is disposed, and said individual turns being of greater diameter than the distance between said axially opposed faces and tilted sideways thereacross by contact with said axially opposed faces.

2,449,480

LIGHTING CONTROL SYSTEM FOR AIRPORTS

James P. Houck, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 20, 1944, Serial No. 545,821
7 Claims. (Cl. 177—352)



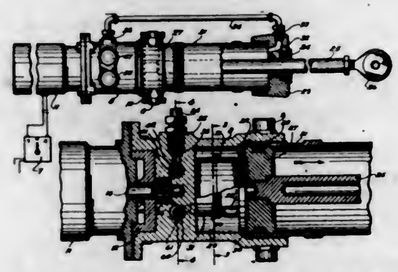
1. A control system for lighting circuits comprising, means including a first selector switch operable in response to wind direction for selecting one of said lighting circuits for operation in accordance with wind direction, means including a control relay responsive to a control signal operable to effect the energization of the selected lighting circuit, and second selector switch means responsive to wind velocity operable to render said relay effective to effect energization of only a predetermined one of said lighting circuits regardless of the selection made in accordance with wind direction in the event that the wind velocity is below a predetermined value, said control relay functioning when operated to render said first and second selector switch means ineffective to change the selection made.

2,449,481

VALVE

George H. Hufferd, Shaker Heights, and George O. R. Lindgren, Willoughby, Ohio, assignors to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio

Application May 18, 1944, Serial No. 536,070
10 Claims. (Cl. 251—114)



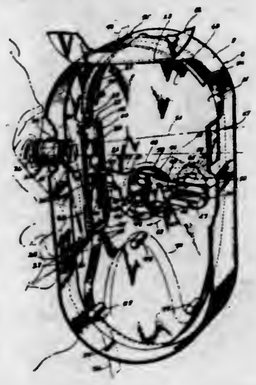
5. A valve comprising a body having walls defining a plug recess, said body being formed with inlet and outlet openings communicating with said recess, a plug disposed in said recess and spaced from the edges of said openings and from the wall of said recess between said openings so as to define a fluid passage through said recess, said plug including sheathing members aligned with said inlet and outlet openings and having edges spaced apart defining a space aligned with the wall of said recess between said inlet and outlet openings, deformable material filling said sheathing members and said space and means for exerting pressure on said deformable material to cause the same to be deformed through said space into sealing engagement with the wall of said recess between said inlet and outlet openings to prevent fluid flow through said recess between said openings.

2,449,482

REVERSIBLE PUMP CONTROLLED HYDRAULIC CYLINDER SYSTEM

George H. Hufferd, Shaker Heights, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio

Application March 12, 1945, Serial No. 582,317
6 Claims. (Cl. 60—52)



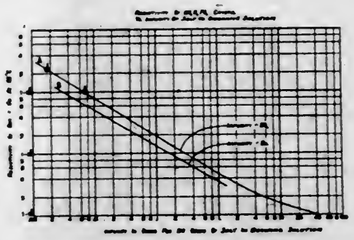
4. In combination a pair of cylinders, a piston portion in each cylinder, a reversible pump, fluid conduits between the pump and each cylinder, spring held power valves for selectively connecting the high pressure side of the pump to either cylinder, a reservoir, means connecting said reservoir to both sides of said pump, a check valve in each of said connecting means, a free piston operable by pressure from the opposite side of the pump to open each check valve, and means on each check valve to open an associated power valve.

2,449,483

ANIMATED PICTURE VIEWING APPARATUS

John F. Iwick, Chicago, Ill.

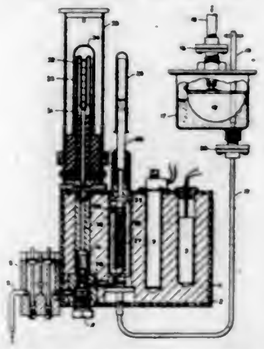
Application June 18, 1947, Serial No. 755,369
4 Claims. (Cl. 88—17)



1. An animated picture viewing device comprising, a case, a prime mover mounted in the said case and provided with a driving shaft extending therefrom, cam means secured to the said driving shaft, claw feed means mounted in the said case and connected to the said cam means, an eye piece mounted on one side of the said case, illuminating window means provided on the opposite side of the said case in axial alignment with the said eye piece, film guide means articulately secured to the said case and intermediately disposed to the said eye piece and the said window means, and idler roller means mounted at the base of and within the confines of the said case constructed and arranged to accommodate endless lengths of film of greater magnitude than the perimetral magnitude of the said case.

2,449,484

METHOD OF CONTROLLING THE RESISTIVITY OF P-TYPE CRYSTALS

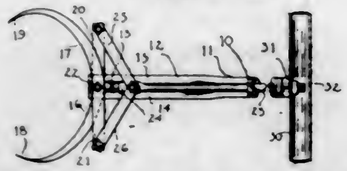


Hans Jaffe, Cleveland Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio

Application November 10, 1945, Serial No. 627,801
15 Claims. (Cl. 171—327)

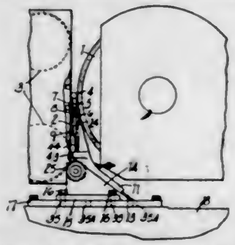
1. In the growing of P-type crystals, the step of controlling the resistivity of the crystals grown by regulating the concentration in the crystal-growing solution of contaminant ions having different valencies than the P-type crystal ions and capable of substituting for the P-type crystal ions by reason of similar size and structure.

2,449,485
GAS ANALYZER
Clarence Johnson, South Euclid, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application January 1, 1942, Serial No. 425,271
10 Claims. (Cl. 23—255)



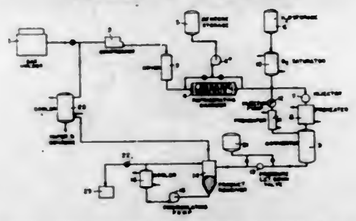
9. Gas analyzing apparatus for continuously determining the percentage of free oxygen in a pressure sample flow of gas comprising, in combination, a catalytic analyzing cell including a heated catalytic wire, a mixing chamber having a conduit leading to said cell, conduit means communicating with said chamber for delivering a vaporizable liquid fuel thereto, means in said chamber to vaporize said fuel, conduit means communicating with said chamber for delivering sample gas thereto, conduit means communicating with said chamber for delivering air thereto to provide an oxygen bias, and common means to regulate the temperature of the materials flowing to and the mixture flowing from said chamber.

2,449,486
CIRCUIT BREAKER
Orvel G. Killian, Wapakoneta, and Bascum O. Austin, Lima, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 15, 1945, Serial No. 582,894
5 Claims. (Cl. 200—116)



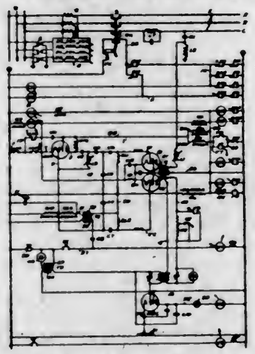
1. In a circuit breaker, an operating lever, means pivotally mounting the operating lever, said operating lever carrying two slotted leg portions, a pin passing through the slots in said leg portions, a pair of cam rollers mounted on said pin, a tension spring biasing said pin and said cam rollers toward one extremity of said operating lever, contact means including a stationary contact and a movable contact of U-shaped configuration, means pivotally mounting the movable contact through the leg portions thereof, said spring urging said rollers into engagement with said leg portions to cause said movable contact to be rocked to open and closed circuit positions in response to rocking movement of said operating lever, a trip lever mounted for rotative movement, biasing means to bias the trip lever into rotative movement, and overload release means to latch the trip lever in a normally stationary position, said trip lever when released moving said operating lever to the open circuit position.

2,449,487
PICKUP CLAW
John H. Kroll, Spokane, Wash.
Application October 17, 1945, Serial No. 622,815
1 Claim. (Cl. 294—115)



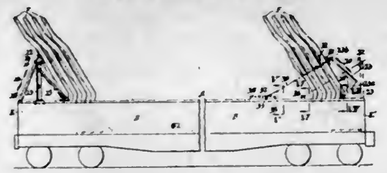
A tool for use in picking out spacer elements and small articles from between the walls of concrete forms, comprising a tube having an end portion of substantial length composed of a half section of said tube flattened along the sides to provide a rounded groove and two flat faces on opposite sides thereof, a shaft slidably mounted in said tube, and having a flattened end riding on the flat faces of said end portion, the other end of said shaft having a hand piece thereon, a pair of claw members comprising thin flat bars curved and tapered throughout the greater portion of their length to one end, means pivotally connecting the bars together between their ends and to the extremity of said flattened end portion of the tube, links pivotally secured to the uncurved ends of said bars, and a bolt pivotally connecting said links to the flattened end of the shaft, the bolt having its head seated in and slidable along the groove in said end portion.

2,449,488
WORK REST HOLDER FOR CENTERLESS GRINDERS
Edward C. Krueger, Otsego, Mich., assignor to Hammond Machinery Builders, Incorporated, Kalamazoo, Mich.
Application October 13, 1947, Serial No. 779,530
10 Claims. (Cl. 51—238)



10. A work rest for a centerless grinder comprising a holder plate, a clamping plate disposed in opposed relationship to said holder plate along the upper portion of said holder plate and pivotally connected with said holder plate, and a cam rod disposed between said plates below the pivotal connection of said clamping plate and adapted when actuated to move the said clamping plate toward said holder plate to clamp a work rest blade between said plates.

2,449,489
PREPARATION OF POLYMERIC ETHYLENE EMULSIONS
Alfred T. Larson, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 2, 1947, Serial No. 758,752
6 Claims. (Cl. 260—29.6)

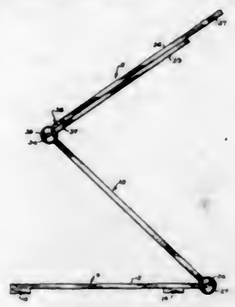


1. In a continuous two-step process for the direct preparation of polymer-from-ethylene emulsions wherein an unemulsified polymer is obtained in the first step under pressures above 50 atmospheres, temperatures above 100° C. and in the presence of an ethylene polymerization catalyst, the second step which comprises introducing an emulsifying medium, and an emulsifying agent into the reaction mixture containing polymer, after its formation and prior to its pressure let-down to atmospheric pressure, and thereafter discharging to atmospheric pressure a permanent emulsion of the polymer in the emulsifying medium.

2,449,490
RELAYING SYSTEM
Bernard E. Lenehan, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 16, 1945, Serial No. 599,832
6 Claims. (Cl. 179—2.5)

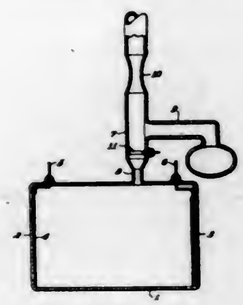
6. A plural-purpose carrier-current relaying-system for protecting a transmission-line section, and also at times performing a voice-modulation function, comprising a carrier-current transmitter comprising an oscillator-tube and amplifier-tube means, said transmitter including a plurality of grid-biasing means for biasing a controlled grid-circuit at different biases, including a normal grid-bias circuit-connection and a more negative grid-bias connection, circuit-means for supplying plate-circuit and cathode-circuit direct-current energization to said oscillator-tube and said amplifier-tube means, said oscillator-tube having two parallel-connected branch plate-circuits, each branch-circuit including a considerable resistance, relaying carrier-starting means in series with one of said branch-circuits, voice-modulation carrier-starting means in series with the other branch-circuit, a relay-circuit path of relatively low resistance in series with the relaying carrier-starting means and in shunt to said oscillator-tube, voice-modulation control-means for effectively closing said voice-modulation carrier-starting means, interrupting said normal grid-bias circuit-connection, and rendering said more negative grid-bias connection effective, and a grid-biasing resistor connected between said controlled grid-circuit and said relaying carrier-starting means.

2,449,491
MEANS TO PREVENT SHIFTING OF LADING IN FREIGHT CARRIERS
George H. Liebegott, Philadelphia, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 1, 1947, Serial No. 777,149
7 Claims. (Cl. 105—369)



1. Means to prevent shifting of freight such as automobile chassis frames set up on end and backed one against another in the direction of the length of the body of a transporting carrier, including a fixed transverse member disposed adjacent one end of the body of the carrier at a level above that of the chassis frame centers to serve as a buttress against which the first chassis frame of the series is leaned; a cooperating retaining element pivoted adjacent the opposite end of the carrier body for inward swinging movement, the latter element having a transverse member adapted to bear against the last chassis frame in the series above center; and adjustable means for drawing upon the retaining element to secure the pack of chassis frames.

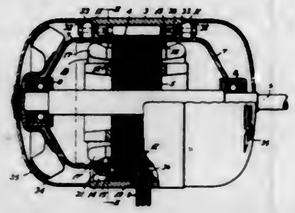
2,449,492
LECTERN
Albert T. Long, Baltimore, Md.
Application July 24, 1947, Serial No. 763,181
6 Claims. (Cl. 45—80)



1. In a collapsible lectern, a base section provided with a receiving opening between its sides, a normally inclined intermediate section hinged at its lower end to said base section within the forward end of said receiving opening, a normally inclined manuscript supporting section comprising a manuscript supporting plate, a pair of laterally spaced longitudinal pieces and means securing said pieces to the underside of said plate, said pieces being spaced to nest said intermediate section therebetween when said manuscript supporting section is collapsed flush with said intermediate section, said pieces and said intermediate section together being of a width to nest in said

receiving opening of the base, with said manuscript supporting plate flush with the said base when said manuscript and intermediate sections

are swung into parallelism with said base section, and means hinging said pieces to the upper end of said intermediate section.

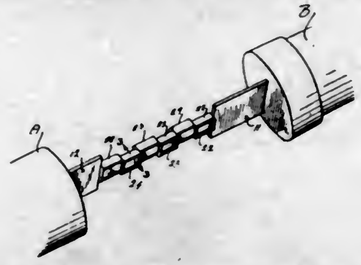


2,449,493
ATTAINING HIGH VACUUM IN PHOTOELECTRIC TUBES
Richard L. Longini, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 28, 1947, Serial No. 771,114
7 Claims. (Cl. 316—20)

1. The method of evacuating a container having a wall portion comprising a caesium-antimony compound which consists in first evacuating the atmosphere through an exit from said container, second evaporating a getter in such a position within said container that it condenses on the walls thereof immediately adjacent said exit, third causing caesium vapor to flow into said container and thereafter sealing off said container at said exit.

2,449,494
FAN-COOLED DYNAMOELECTRIC MACHINE
Leon R. Ludwig, Theodore C. Fockler, and William H. Formhals, Buffalo, N. Y., and Howard T. Walton, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 30, 1946, Serial No. 694,064
7 Claims. (Cl. 171—252)

1. A totally enclosed dynamo-electric machine comprising a frame-ring, an end-plate secured within the inner periphery of the frame-ring near each end of the frame-ring, a stator-core member secured between the two end-plates, at least a portion of the outer periphery of the stator-core being radially spaced from the inner periphery of the frame-ring, the end-plates having air-vents therethrough, admitting of an axial air-flow over the stator-core from one end of the core to the other, a stator-winding carried by the stator-core, said stator-winding having end-turns, a plurality of leads extending from the end-turns at one end of the stator-winding, said frame-ring having a hole through which said leads pass, a shaft, a rotor-core member carried by the shaft, two imperforate brackets removably mounted on the machine, one at each end, each imperforate bracket having no air-



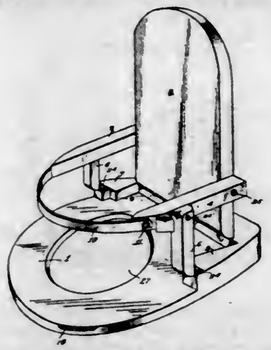
hole therein, and having a bearing for supporting the shaft at that end of the machine, and further having a plurality of peripheral lugs having an intermittent radial register with that end of the frame-ring, and further having a peripheral part having a continuous axial register with the end of the end-plate at that end of the machine, the peripheral part being bulged outwardly at the place where the leads leave the end-turns, and the inner periphery of the adjacent end-plate being notched outwardly at the same place, to permit the leads to pass from the end-turns to the space surrounding the periphery of the stator-core and thence out through the hole in the frame-ring, and sealing the place where the end-plate is notched.

2,449,495
APPLICATION OF PHOSPHATE PROTECTIVE COATINGS TO NONFERROUS METALS
John C. Lum, Union, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 12, 1944, Serial No. 517,979
1 Claim. (Cl. 204—56)

The process of treating members of non-ferrous metal selected from the group of metals consisting of zinc, cadmium and alloys in which zinc and cadmium predominate, in an aqueous acidic phosphate solution containing from 0.10% to 0.30% of dissolved iron to provide for applying protective phosphate coatings containing iron on the members, the steps comprising immersing the non-ferrous metal members in the solution to react therewith to produce thereon a protective iron-containing phosphate coating, the iron content of the solution being decreased thereby and some of the non-ferrous metal being dissolved in the solution, introducing into the solution ferrous members, connecting a source of direct current to the ferrous members to render one ferrous member cathodic and the other anodic, the anodic ferrous member being dissolved in the solution whereby to replenish the ferrous metal content of the solution to a value of from 0.10% to 0.30%, and zinc or cadmium being deposited out of solution on the cathodic member.

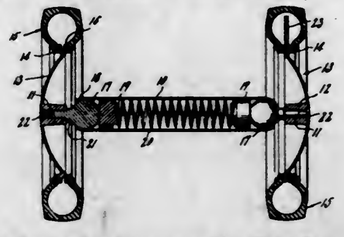
2,449,496
ELECTRICAL CONNECTION
Frank J. Matan, Gary, Ind.
Application March 31, 1943, Serial No. 481,342
2 Claims. (Cl. 287—64)

1. In an electrical connection, the combination of a pair of parts having electrically operatively connected terminal straps, each of said straps being of thin, wide, flat electrically conductive metal including a flat body portion with uniformly spaced bendable clamping fingers along the opposed longitudinal side edges thereof in directly opposed pairs, the terminal straps being so arranged when connected that the fingers of each terminal portion are bent in interfitting relation exactly in snug fitting relation between adjacent fingers of the other terminal portion and over the opposite side of the body of said other terminal portion.



2,449,497
COMBINATION ASPIRATOR TIP
Will W. McLeod, Montgomery, Ala.
Application August 22, 1946, Serial No. 692,290
2 Claims. (Cl. 128—276)

2. The combination with a tubular handle forming an air reservoir having a port which is manually controlled by the finger tip of the operator thereof, a suction tube mounted within the handle and having an exterior forward extension terminating in a suction nozzle, of a spraying nozzle mounted rigidly on the suction nozzle slightly to the rear thereof, means for conveying a liquid solution to the spraying nozzle, and means for conveying air under pressure from the reservoir to the spraying nozzle.

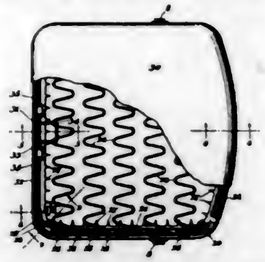


2,449,498
CHILD'S TOILET SEAT
Lawton B. Mellichampe, Washington, D. C.
Application April 5, 1946, Serial No. 659,923
5 Claims. (Cl. 155—131)

3. In a detachable toilet seat, a base, said base having a front portion and a rear portion, said front portion including an aperture, said rear portion including raised side portions and a raised rear portion, and a back, means pivoting said back to said rear portion, said back when in closed position lying in juxtaposed position to said raised side portions and rear portion, and means for retaining said back in a raised or a lowered position including a latching bar, means pivotally mounting said latching bar on said rear portion of said base, a spring having one of its ends attached to said rear portion and its other end attached to said latching bar, said top having an aperture and a slot terminating in said aperture whereby said latching bar may hold said back

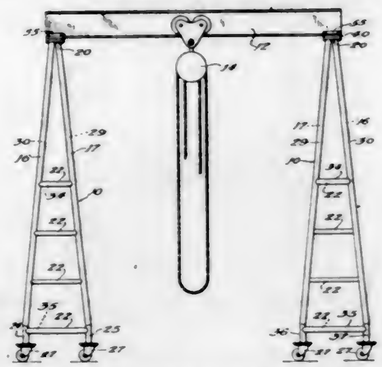
in raised position when said latching bar engages said slot.

2,449,499
DEVICE FOR DEMONSTRATING THE ACTION OF THE FRONT WHEELS OF AUTOMOBILES
Sidney R. Milburn, Mountain View, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application May 9, 1947, Serial No. 746,932
4 Claims. (Cl. 35—13)



1. A device for demonstrating the effect of correct and incorrect alignment of the front wheels of a motor vehicle and the action of camber and toe-in, comprising an axle a few inches long, a short spindle secured at each end of the axle with a ball and socket friction joint that permits each spindle to be moved to various angles relatively to the axle and be retained by such friction in the adjusted positions, and a wheel and tire upon each spindle, whereby when the axle is grasped in the hand and advanced to roll the tires upon a flat surface the manner in which the tires roll upon the surface under different wheel settings will be demonstrated.

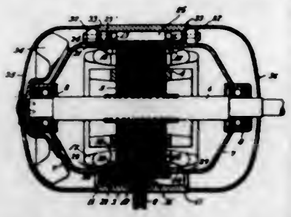
2,449,500
CHAIR SEAT
Walter E. Nordmark, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application April 30, 1945, Serial No. 591,011
12 Claims. (Cl. 155—179)



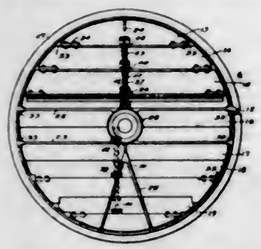
10. In a seat structure, a seat frame having side portions provided with spaced hooks thereon and with inwardly extending spurs, a plurality of upwardly arched sinuous springs spanning the seat frame from side to side and having their opposite ends attached to said hooks, a resilient wire having its opposite ends secured to the side portions

of the seat frame and its middle portion extended forwardly and upwardly beyond the foremost spring, a sheet of upholstery material stretched

over the springs and the resilient wire and attached to the spurs, padding over said sheet, and an upholstery cover stretched over the padding and attached to the spurs.



2,449,501
GANTRY
Lawrence C. Oertle, Milwaukee, Wis., assignor to La Ray Engineering and Equipment Co., Inc., Milwaukee, Wis., a corporation of Wisconsin
Application November 10, 1945, Serial No. 627,885
3 Claims. (Cl. 212—13)

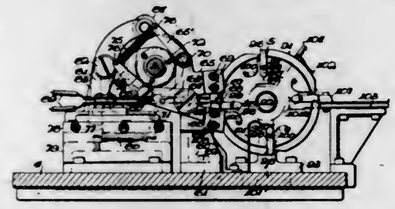


1. A gantry comprising a pair of towers, and a beam supported on said towers, each tower comprising a pair of integral frames, one of said frames comprising a pair of diverging legs, and a plurality of spaced rungs integrally connected at their opposite ends to said diverging legs to form a ladder, a projection on each of said frames, and a tie rod removably engageable with said projections to form the tower into a unitary structure.

2,449,502
FAN-COOLED MOTOR
James H. Penney, Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 8, 1946, Serial No. 675,475
6 Claims. (Cl. 171—252)

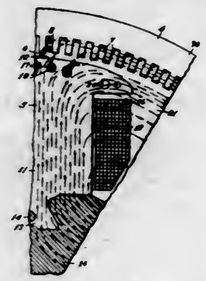
1. A totally enclosed dynamo-electric machine comprising a frame-ring, an end-plate secured within the inner periphery of the frame-ring near each end of the frame-ring, a stator-core member secured between the two end-plates, at least a portion of the outer periphery of the stator-core being radially spaced from the inner periphery of the frame-ring, the end-plates having air-vents therein, admitting of an axial air-flow over the stator-core from one end of the core to the other, a stator-winding carried by the stator-core, said stator-winding having end-turns, a plurality of leads extending from the end-turns at one end of the stator-winding, said frame-ring having a hole through which said leads pass, a shaft, a rotor-core member carried by the shaft, two imperforate brackets removably mounted on the machine, one at each end, each imperforate bracket having no air-hole therein, and having a bearing for supporting the shaft at that end of the machine, and further having a plurality of peripheral lugs having an intermittent radial register with that end of the frame-ring, the stator-core member further comprising at least one axially extending ring, secured to the end-plate at the end of the machine where the leads leave the end-turns, the stator-core member having a continuous axial register with each imperforate bracket, at least one of said axial registers being between said axially extending ring and the imperforate bracket at that end of the machine, said axially extending ring having a hole therein, through which said leads pass, and sealing-means for plugging the hole in said axially extending ring.

2,449,503
SHUTTER
Willis A. Pennow and Elroy W. Yungman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1945, Serial No. 597,230
5 Claims. (Cl. 240—45.2)



2. A signalling shutter assembly for searchlights comprising, a frame member, a plurality of straight blades pivotally mounted in parallel relation in the frame member, a pair of shaft members rotatably mounted in the frame on opposite sides of its horizontal axis supporting adjacent blades, a linkage connecting each of said shaft members with the other blades above and below the said two adjacent blades, and a gear train connecting said shaft members, said gear train including a drive gear common to both shaft members.

2,449,504
ANODE
Paul R. Pine, Middleburgh Heights, Ohio, assignor to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio
Application April 26, 1945, Serial No. 590,417
2 Claims. (Cl. 204—288)

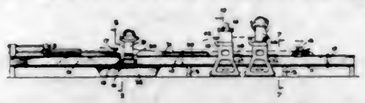


1. A composite anode comprising a plurality of anode pieces composed of electrolytic metal sheet and spaced approximately parallel bars connected together adjacent their lower ends and having their upper ends bent into hooks adapted to engage over a bus bar whereby to support such composite anode and afford a connection for current supply, said anode pieces being approximately square and two adjacent sides thereof being provided with opposed notches approximately equidistant from one corner, said notches receiving said bars whereby good contact is provided between the latter and said anode pieces, said corners of said anode pieces being exposed to electrolytic action and serving to shield portions of said bars from such action.

2,449,505
MACHINE FOR PRODUCING CATHODE SLEEVES FOR THERMIONIC VALVES
Albert F. Pityo, Clifton, Harry Butterfield, Maplewood, and Samuel W. Warner, Newark, N. J., assignors to Tweezer-Weld Corporation, Newark, N. J., a corporation of New Jersey
Application March 14, 1946, Serial No. 654,324
29 Claims. (Cl. 219—4)

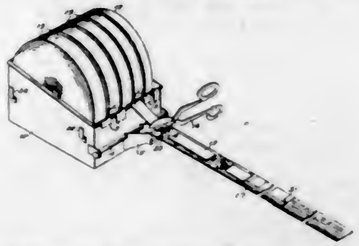
1. A machine for welding tabs to completed cathode sleeves for thermionic valves or the like, comprising a turret, devices carried by the turret for externally holding and supporting the completed cathode sleeves, means to index the turret to bring each sleeve to a welding position, means to bring a tab into overlapping relation to the exterior of each cathode sleeve when such sleeve is shifted to the welding position, means to press the tab and sleeve together and confining the pressure within limits which are incapable of collapsing the sleeve, and means to weld the tab to the sleeve, the pressing means causing the pressure to follow through during the welding period.

2,449,506
POLE-TIP STRUCTURE FOR SALIENT POLE SYNCHRONOUS MACHINES
Ernest I. Pollard, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 18, 1945, Serial No. 611,416
2 Claims. (Cl. 171—252)



1. A salient-pole synchronous dynamo-electric machine comprising a stator-member and a rotor-member, with an airgap in between, said stator-member being an armature-member having an armature-winding, and said rotor-member being a salient-pole field-member having a plurality of salient pole-pieces made of magnetizable material, each pole-piece having a pole-face portion adjacent to the airgap, and having also a shank-portion, the pole-face portion including two substantially identical pole-tips overhanging the shank-portion, one on either side thereof, damper-bars in the central portion of the pole-face portion but not in the pole-tips, and a field-winding on the shank-portion of each pole-piece; characterized by each pole-tip having one or more openings in the magnetic material thereof for reducing the effective magnetic cross-section of the tip in an amount sufficient to produce an effectively increased transient-reactance saturation with respect to leakage-flux flowing circumferentially within the tip and thence across the interpolar spaces between the pole-tips during transient conditions; the pole-face portion, including the tips, of each pole-member having a flux-distributing contour which is symmetrical with respect to the centerline of the pole.

2,449,507
STRETCHING MACHINE FOR UNCOILING, FLATTENING, AND COILING METAL STRIP
Alfred Pope, Penn Fields, Wolverhampton, England, assignor to Joshua Bigwood & Son Limited, Wolverhampton, England, a British company
Application December 28, 1944, Serial No. 570,107
In Great Britain November 24, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 24, 1963
4 Claims. (Cl. 153—35)

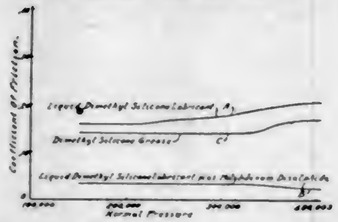


3. A machine for flattening metal strip initially in coil form comprising an elongated bed

consisting of two sections placed in alinement and spaced apart, an adjustable gripper mounted for movement along one section of the bed, means for anchoring said adjustable gripper to the bed, a second gripper mounted on the other section of the bed, power operated means for moving the

second gripper parallel to the bed towards and away from said adjustable gripper, a guideway disposed transversely to said bed and extending between the sections thereof, a table slidably mounted on said guideway, means for moving said table along said guideway, and uncoiling means on said table.

2,449,508
DISPENSING APPARATUS FOR STRIP MATERIAL
Charles L. Reynolds, Georgetown, Del.
Application October 3, 1945, Serial No. 620,091
3 Claims. (Cl. 242—55.4)

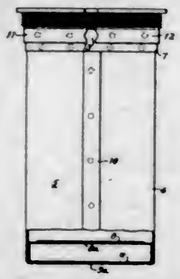


2. A dispensing apparatus consisting of an open top tray having sides sloping to the front, partitions in said tray forming compartments respectively for rolls of wicking exposed to view by said sloping sides, each compartment serving to receive a roll of wicking in frictional contact with the bottom of said tray, a carriage, means eccentrically mounting said carriage on the front of said tray for sliding movement transverse with respect to said compartments, and a pair of shears operatively mounted upon said carriage, whereby said shears can be moved laterally for alinement with any compartment for a cutting operation.

2,449,509
NONSKID DEVICE FOR CRUTCHES AND THE LIKE
Sidney H. Richards, Portland, Maine
Application February 24, 1947, Serial No. 730,491
6 Claims. (Cl. 135—53)

1. For use on the lower end of the shank of a crutch having a lateral lug, a non-skid device comprising a helical spring fitting over said end, and non-skid gripping means mounted on the bottom of the spring around said end, the spring being threaded on said lug so that the gripping means may be advanced beyond said end by rotation of the coil in one direction and may be retracted into inoperative position around the end by rotation in the opposite direction.

2,449,510
LUBRICANTS
Billy P. Robertson, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 7, 1946, Serial No. 667,773
5 Claims. (Cl. 252—49.7)



1. A lubricant comprising, in combination, a polymeric silicon oxide having the unit formula:

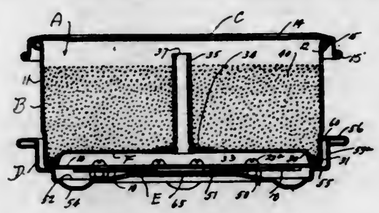
$$\left[\begin{array}{c} R_1 \\ | \\ -Si-O- \\ | \\ R_2 \end{array}\right]_x$$

where R_1 and R_2 are saturated aliphatic radicals and x is greater than 3, the polymeric silicon oxide having oily characteristics, and from 0.1% to about 180% of the weight of the polymeric silicon oxide of a finely divided solid compound selected from the class consisting of the disulphides, selenides and tellurides of molybdenum, tungsten, and titanium.

2,449,511
CONTAINER FOR BOMBS
William J. Russell, New Britain, Conn., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 21, 1943, Serial No. 507,190
6 Claims. (Cl. 102—70)

2. An ordnance fuse container comprising in combination, a cylindrical sleeve of a one-piece element of relatively thin sheet metal construction, said sleeve being generally in the shape of a right cylinder and having a seam comprising a relatively narrow flap, of lesser length than the sleeve, disposed substantially symmetrically with

reference to the mid-circumference of the sleeve and at right angles thereto, said flap being bent out of the surface of the sheet metal by an amount equal to the thickness of the sheet metal but being parallel to the sleeve contour, whereby the inner surfaces of the abutting edges of the one-piece element fall in the same internal contour to thus provide the sleeve with a smooth inner surface over the entire length of the sleeve, the lap provided by said flap being rigidly secured to the underlying sheet metal by a plurality of spot welds, an inverted cup-like member having a relatively small axial opening fitting into the bottom of the cylindrical member and being secured into place, by a plurality of spot welds, in such a position that a small bottom strip of uniform axial width of the cylindrical member projects beyond the cup edge, the cup edge thus forming a downwardly directed shoulder, a covering disk having a relatively small central opening disposed into the cylindrical member to fit against the cup edge, the said small bottom strip being bent inwardly against the cover to hold it in place, an internally threaded ring having a smooth axially directed flange fitting over the top of the cylindrical member and held in place by a plurality of spot welds, a pair of arcuate segments each somewhat less in circumferential length than the outer circumference of the internally threaded ring spot welded to the internally threaded ring below the upper edge of said ring.

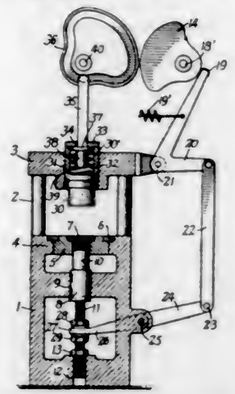


2,449,512
APPARATUS FOR MAKING HOLLOW PLASTIC ARTICLES
Clemens Scheuer, Forest Hills, N. Y.
Application March 24, 1947, Serial No. 736,753
3 Claims. (Cl. 18—19)

3. An apparatus for therewith making a hollow plastic article having the combination of a mold for the article adapted to receive therewithin a tube of plastic material and having an opening for the end of said tube, a device adapted to seal said opening and engage said tube end, a plurality of pipes extending from said device interiorly in said tube, said pipes extending from said device exteriorly of said mold, each of said exterior pipes having a valve, a compressed fluid line being connected to said pipes, said pipes having outlets that are located in the regions and directions of the deep parts of said mold, means to feed compressed air through said line, valves, and pipes into said mold, said mold having a secondary opening for the opposite end of said tube, a secondary device adapted to seal said secondary opening and engage said opposite end of the tube, said secondary device having a bore leading into said tube and exteriorly of said mold and tube, and a valve for opening and closing said bore.

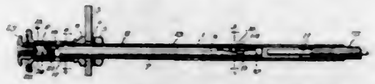
2,449,513
SOAP FEEDER
George C. Schmidt, Pittsburgh, Pa., assignor, by mesne assignments, of one-half to Lois R. Schmidt and one-half to Robert G. Schmidt, both of Pittsburgh, Pa.
Application May 7, 1945, Serial No. 592,506
5 Claims. (Cl. 206—0.5)

2. In a regulator for use in spray type washing machines the combination of a container including a bottom wall and upstanding side walls, a closure for the container, valve means in the bottom of the container for regulating inlet and exit of wash water thereto and therefrom, a perforated soap supporting screen in the container including a top wall and a depending skirted wall, the latter being perforated and spaced from the inside surface of the upstanding wall of the screen, whereby soap will rest not only upon said screen but also in the space between the screen



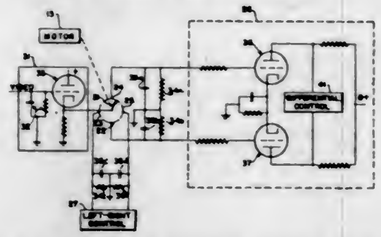
skirt and the side wall of the container, a breather tube supported by the screen and opening below the screen and in the top of the container below the closure, and a supporting tray for the container including a bottom wall, an upstanding skirt wall, and means formed therebetween for supporting the bottom of the container in spaced relation above the inside surface of the tray bottom wall, the bottom wall of the tray having at least one combined discharge and feed opening therein.

2,449,514
OIL WELL PACKER
Warren E. Scoville, Jr., Nutley, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application March 21, 1946, Serial No. 656,069
5 Claims. (Cl. 166—10)



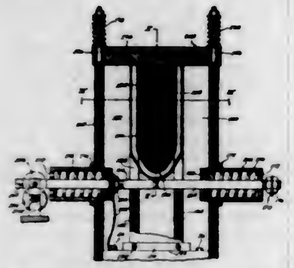
1. A well packer comprising, an expansible tubular body of elastic material, a metal ring at each end of said body, plies of cord fabric surrounding said body and firmly anchored to each ring, a semi-rigid frustro-conical textile ring surrounding the cord plies near each metal ring and formed of a number of heavy fabric plies wound one over the other to produce a ring that is rigid enough to retain the frustro-conical shape under expanded well closing conditions, and a metal annulus adjacent each metal ring positioned to support the adjacent semi-rigid frustro-conical ring to thereby support the expanded cord fabric near the metal rings against rupturing forces.

2,449,515
METHOD OF FORMING PARTS FROM POWDERED METAL
Richard P. Seelig, Elmhurst, Long Island, N. Y., assignor, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y., a corporation of the United States
Original application February 15, 1944, Serial No. 522,530. Divided and this application November, 30, 1944, Serial No. 565,874
3 Claims. (Cl. 29—160.5)



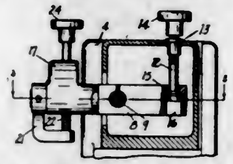
2. A method of forming a powdered metal article which includes the steps of applying a positive compacting pressure to a mass of powdered metal confined in a die cavity to impart thereto a predetermined shape, applying to said shaped mass a moving force to remove said shaped mass as a unit from said die cavity and maintaining on said shaped mass a yielding diminishing pressure of less maximum value than that of said positive compacting pressure during said movement of said shaped mass.

2,449,516
CONTROL MECHANISM
Henry G. Shakespeare and William R. Gerry, Kalamazoo, Mich., assignors to Shakespeare Products Company, Kalamazoo, Mich., a corporation of Michigan
Application December 10, 1943, Serial No. 513,800
4 Claims. (Cl. 74—503)



1. A control mechanism, including an immovable tubular guide member, an operating member slidably received by said guide member having a cam surface formed on the normally inner end portion thereof, a knob engaged with the normally outer end portion of the operating member having a co-axially disposed way therethrough, a locking member mounted for longitudinal sliding movement on said operating member having its normally inner end portion apertured and overlying the cam surface of the operating member, a shank connected to the normally outer end portion of the locking member slidably received in the co-axially disposed way of said knob, a latch member loosely received in the apertured normally inner end portion of the locking member movable over the cam surface of said operating member by the locking member towards or away from portions of the inner surface of the guide member, and means in the knob member engaging said shank for normally retaining the same and the locking member in a predetermined position with respect to the operating member.

2,449,517
CONICAL SCANNING ERROR REDUCTION DEVICE
Perry R. Stout, Washington, D. C., and William J. Tull, Cambridge, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War
Application October 19, 1945, Serial No. 623,408
1 Claim. (Cl. 343—120)



In a radio object-locating system employing conical scanning for the production of voltages related to each other in accordance with the coordinates of a selected target relative to the system and employing a single-brush four-segment commutator for analysis of the signals returned in four quadrants, a compensating device comprising first, second, third and fourth capacitors respectively connected between the four commutator segments and a common ground point, and first, second, third and fourth resistors respectively connected in parallel with said first, second, third, and fourth capacitors whereby the average voltages on the commutator segments may be indicative of the true position of the target.

2,449,518
CIRCUIT INTERRUPTER
Albert P. Strom, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 15, 1943, Serial No. 475,897
29 Claims. (Cl. 200—82)

1. In an automatic reclosing circuit interrupter, separable contacts normally biased into engagement, fluid actuated means for separating said contacts to interrupt the circuit a distance greater than that required to prevent re-striking of an arc following a circuit interrupting operation, means responsive to a predetermined condition of the circuit for admitting a fluid under pressure to said fluid actuated means to open the circuit and responsive to circuit interruption for cutting off admission of said fluid, and a restricted vent for said fluid actuated means, so that fluid admitted thereto to separate said contacts will escape therefrom only at a predetermined rate to permit automatic reclosure of said contacts under the influence of said bias only a predetermined time after separation thereof and thereby automatically reclose the circuit said predetermined time after a circuit interrupting operation and re-energize said condition-responsive means if said predetermined condition still exists in said circuit.

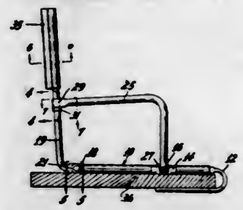
2,449,519
BELT TIGHTENING AND TRACKING DEVICE
Donald E. Sutton, Kalamazoo, Mich., assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich., a corporation of Michigan
Application April 8, 1946, Serial No. 660,351
2 Claims. (Cl. 51—148)

2. In a machine of the class described, the combination with a pulley and spindle thereof, of a spindle supporting member disposed in parallel relation to the spindle and provided with a pivot disposed transversely of the spindle, a threaded adjusting means for said support member, a spindle supporting bracket rotatably mounted on said supporting member for axial tilting adjustment therewith, an arm on the outer end of said supporting member projecting below said bracket, a tensioning screw disposed through said bracket in supporting engagement with said arm and having a threaded abutment thereon, and a coiled spring arranged on said screw between said abutment and bracket.

2,449,520
3,5-DIAMINO-4-HYDRO-THIOTRIAZINE-1-DIOXIDE RESINS
Henry A. Walter, Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application May 10, 1947, Serial No. 747,335
5 Claims. (Cl. 260—67.6)

1. The reaction product of 3,5-diamino-4-hydro-thiotriazine-1-dioxide and an aldehyde.

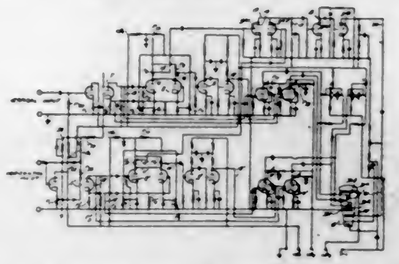
2,449,521
SOLDERING OR WELDING IMPLEMENT
Samuel W. Warner, Newark, N. J., assignor of one-half to Herman Bernstein and one-half to Joe Sodowick, Newark, N. J.
Application September 26, 1945, Serial No. 618,690
9 Claims. (Cl. 219—26)



1. An implement of a shape and size so that it may be held in the hand like a pencil in writing, said implement being employed in soldering or welding, said implement comprising opposed tubular arms having flattened portions arranged near and spaced from their rear ends, the rear ends of the tubular arms forming tubular sockets for receiving the ends of wires connected with the opposite poles of a source of current, the tubular sockets being squeezed upon the wires for clamping connection therewith, means rigidly connecting the flattened portions and insulating the same, and electrodes having portions removably mounted within the forward ends of the tubular arms.

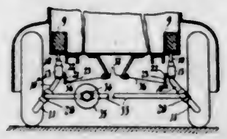
2,449,522
ARTIFICIAL TOOTH
Albert H. White, Washington, D. C.
Application April 3, 1945, Serial No. 586,339
12 Claims. (Cl. 32—8)

1. An artificial tooth comprising a body having base and root portions, said root portion including a plurality of longitudinal ribs each joined at its inner end to the base portion by a resilient connection and the entire extent of each rib outwardly beyond said connection being free and unsupported and having an outer longitudinal edge of said free and unsupported portion adapted to engage a longitudinal zone of a tooth socket and being urged into tight anchoring contact with the socket by the resilience of said connection.



2,449,523
STADIUM FOLDING CHAIR
George P. Wilson, Beaver, Pa.
Application February 12, 1947, Serial No. 728,028
3 Claims. (Cl. 155—133)

1. A folding chair comprising a pair of spaced horizontal substantially parallel seat frame members having yieldable horizontal yokes on the forward extremities thereof, a flat seat mounted on and extending between said seat frame members and maintaining said seat frame members in parallel spaced relationship, an outwardly facing pin rigid on each of said seat frame members substantially intermediate their length, a pair of substantially parallel upright members each being pivotally connected at its lower extremity to the rear extremity of one of said seat frame members, a back rest mounted on and extending between said upright members and maintaining said upright members in substantially parallel relationship, a collar rigidly mounted on each of said upright members substantially in-



termediate the height of said upright members, a pair of angularly bent arm members having the rear ends deformed into vertical cylindrical loops, said upright members registering rotatably in said loops, said loops resting on the upper surfaces of said collars, an ear having a hole therethrough on the lower extremity of each of said arm members, said pins on said seat frame members registering in said holes in said ears thereby removably joining the lower extremities of said arm members to said seat frame members when said chair is in extended condition.

2,449,524
OSCILLOSCOPE DEVICE
Thomas H. Witherby, Buffalo, N. Y., and Harry E. Farnsworth, Providence, R. I., assignors to the United States of America as represented by the Secretary of War
Application November 27, 1944, Serial No. 565,378
13 Claims. (Cl. 315—14)

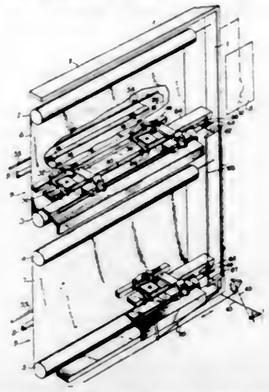
1. In a circuit including signal input terminals, a cathode ray tube having deflecting plates, and a focusing electrode; means for generating a voltage substantially proportional to the square of the signal input voltage; and vacuum tube means for applying said square law voltage to said focusing electrode for automatically correcting the focus.

2,449,525
AUTOMOBILE SANDING DEVICE
Chester F. Beam, Niagara Falls, Ontario, Canada
Application June 18, 1947, Serial No. 755,398
1 Claim. (Cl. 291—25)

In an automobile sanding device having a duct for gravity flow of sand from a source of supply, a control valve therein comprising a body member interposed in said discharge duct providing a vertical chamber defined in part by a top wall centrally apertured to form an inlet, said top wall having an outer face and an inner face, said inner face providing a valve seat surrounding the central aperture in said top wall, a valve in said chamber having a top face normally engaging said seat and having a pair of spaced depending arms, a cross plate disposed between said arms to extend transversely thereof, a compression coil spring disposed between said arms with its upper end engaged with said valve and its lower end seated on said cross plate, bolts extending through openings provided in said top wall at opposite sides of said central aperture, said bolts having heads engaged with said outer face of said top wall and being threadedly engaged with said cross plate for adjusting the tension of said spring, a saddle bar pivotally mounted on said arms below said cross plate, and a bellcrank pivoted on said body member having an arm engaged with said saddle bar for opening said valve.

2,449,526
PROCESS FOR MANUFACTURING PLYWOOD TUBING
James J. Dunne, Westport, Conn., and Orvil S. Tuttle, New Rochelle, N. Y., assignors to United States Plywood Corporation, New York, N. Y., a corporation of New York
Application May 3, 1943, Serial No. 485,478
8 Claims. (Cl. 154—83)

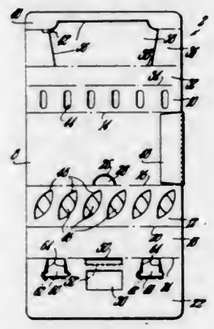
2. The method of forming an integral molded seamless plywood tubing from wood veneers, which comprises applying a thermo-sensitive adhesive to a plurality of double-ply wood veneers, each of said double veneers being composed of two wood veneer layers united to each other with the grain of one running at an angle to that of the other, introducing successively narrower strips of such double-ply veneers one by one into a relatively rigid cylindrical casing through one end thereof, applying an expansible membrane interiorly of the assembled double-pay veneers, and distending the membrane with a heated medium at a pressure sufficient to press the veneers outwards against the interior of the casing to mold them into a seamless plywood tubing.



2,449,527
POLYMERS OF MONOVINYLPHENOXTHINES AND METHOD OF PREPARING THE SAME
Ralph G. Flowers and Leola W. Flowers, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
No Drawing. Application May 29, 1947, Serial No. 751,469
7 Claims. (Cl. 260—85)

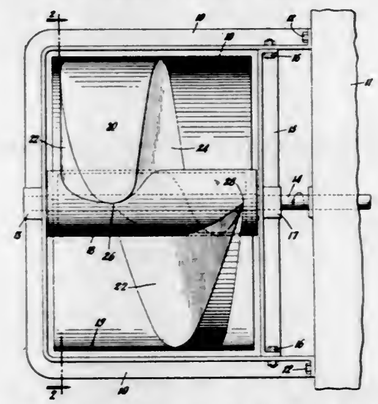
1. A homopolymer of monovinylphenoxthine.

2,449,528
COPOLYMERS OF MONOVINYLPHENOXTHINES AND METHOD OF PREPARING THE SAME
Ralph G. Flowers and Leola W. Flowers, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
No Drawing. Application May 29, 1947, Serial No. 751,470
14 Claims. (Cl. 260—86.5)



1. A composition comprising the product of copolymerization of a mass containing (1) monovinylphenoxthine and (2) a different $CH_2{=}C<$-containing compound which is copolymerizable with the monovinylphenoxthine.

2,449,529
TUFTING MACHINE
Willy Hofmann, West New York, N. J., assignor to W. Hofmann Textiles Inc., West New York, N. J., a corporation of New Jersey
Application October 18, 1945, Serial No. 623,091
11 Claims. (Cl. 112—79)

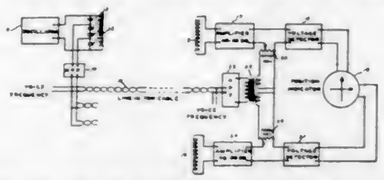


1. In a tufting machine, the combination with a needle reciprocable through the fabric to form loops of yarn at the opposite face of the fabric, a presser, a stop to cooperate with the presser to confine the fabric, a looper having a hook to enter successive yarn loops drawn by the needle, and a frame remote from said looper to hold the fabric to be tufted positioned before the needle, and with at least a portion of it extended, and to shift the fabric parallel to its extent, of a knife to cut the loops and means to operate said knife, said knife and knife-operating means being located entirely at the opposite side of said hook from the fabric, the knife being mounted to move its cutting edge substantially into contact with the looper to sever the loops between them, and said knife-operating means actuating the knife to make cutting strokes while the loops to be cut are, respectively, on the looper.

2,449,530
DISPLAY APPARATUS
Russell A. Lambert, Springfield, Mass., assignor to Brooks Bank Note Company, Springfield, Mass., a corporation of Massachusetts
Application July 17, 1946, Serial No. 684,101
2 Claims. (Cl. 248—174)

2. A display structure comprising in combination, a central panel, upper object supporting panels extending outwardly from upper longitudinal edges of said central panel, and being provided with slots elongated perpendicularly relative to the longitudinal axis of said panel, lower object supporting panels extending outwardly from lower longitudinal edges of said central panel, and being provided with slots angularly disposed relative to the longitudinal axis of said panel, lower supporting panels extending horizontally inwardly towards each other from the lower marginal edges of said lower object supporting panels, upper supporting panels extending horizontally inwardly towards each other from the upper marginal edges of said upper object supporting panels, lower locking panels extending upwardly from the inner marginal edges of said lower supporting panels and disposed in superposed relation on said central panel, and upper locking panels extending downwardly from the inner marginal edges of said upper supporting panels and disposed in superposed relation on said central panel, all adapted and arranged with said object supporting panels being angularly disposed whereby the opposite ends of objects are held in the openings in said object supporting panels and the objects themselves are held in vertical alignment relative to the display structure.

2,449,531
IMPELLER
Nixon Lee, Jr., Forest Hills, N. Y.; Nixon Lee, executor of said Nixon Lee, Jr., deceased
Application June 2, 1942, Serial No. 445,416
1 Claim. (Cl. 170—156)



An impeller comprising a hub, a cylindrical shield surrounding and spaced from the hub, a blade connecting said hub and shield comprising a section of an airfoil projected in a spiral around said hub, said blade tapering with diminishing rectangular cross section to a terminal sharp edge and having a substantially uniform thickness in a direction radially outward from the hub, and means for rotating the blade.

2,449,532
INDICATOR SYSTEM FOR TOWED GLIDERS
George F. Leydorf, Cincinnati, Ohio, assignor, by mesne assignments, to Avco Manufacturing Corporation, a corporation of Delaware
Application March 22, 1945, Serial No. 584,240
4 Claims. (Cl. 177—352)

1. A system for indicating the position of a glider relative to a towing plane, comprising a

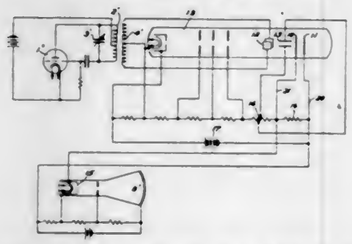
coil in the towing plane, an oscillator to excite the coil at an audio frequency to create a magnetic field, a tow line connecting the towing plane and the glider, a horizontal loop and a vertical loop in the glider in the magnetic field, indicating meters in the glider, and a cable supported

by the tow line carrying a reference voltage from said towing plane to said meters, said reference voltage being combined with voltages induced in the loops to affect said meters when the glider deviates from the line of flight of the towing plane.

2,449,533
SYNERGISTIC INSECTICIDAL COMPOSITIONS
Edward R. McGovran, Hyattsville, Md., Elmer L. Mayer, Anaheim, Calif., and Florence B. Talley, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application July 8, 1947, Serial No. 759,683
4 Claims. (Cl. 167—34)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An insecticidal composition comprising an insecticidal nicotine compound and phthalonitrile as a synergist therefor.

2,449,534
WEARING APPAREL HAVING PERMANENT CREASES THEREIN
Hans Meyer, Richmond, England
No Drawing. Application January 29, 1946, Serial No. 644,197. In Great Britain January 7, 1946
5 Claims. (Cl. 2—243)

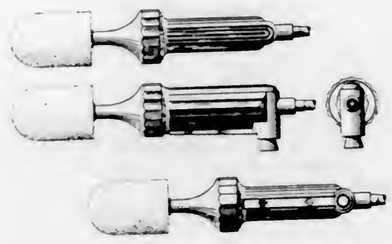


1. Wearing apparel having a permanent crease in the fabric thereof, which comprises a strip of non-thermo-plastic, non-adhesive material having one side thereof provided with a water-insoluble thermoplastic material which becomes adhesive at a temperature below the scorching point of said fabric, the thermoplastic side of said strip being heat and pressure secured to the inner surface of the fabric where the crease is to be formed, the fabric and strip being creased by heat and pressure longitudinally with respect to said strip and intermediate the longitudinal edges thereof and said crease having the capacity of flattening out and returning to creased condition after each such flattening out and being unaffected by moisture.

2,449,535
MEANS FOR LOCATING AND POSITIONING FOOT CORRECTIVE APPLIANCES
William M. Scholl, Chicago, Ill.
Application November 22, 1944, Serial No. 564,642
2 Claims. (Cl. 12—103)

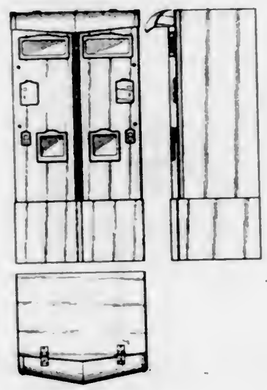
2. A device for positioning foot correction appliances in the nature of foot and arch supporting pads, comprising a one-piece structure including a smooth shank portion, one end of said shank portion being flattened uniformly from opposite sides toward the center, a pair of tines formed in said flattened portion and tapering from their base to their points, a straight lateral shoulder between said tines to limit their penetration, said tines extending parallel to the axis of said shank portion, and the opposite end of said shank portion being smoothly curved to one side of said axis to facilitate the positioning of an appliance in a high heeled shoe.

2,449,536
ELECTRICAL LIGHT IMPULSE GENERATOR
Hanns-Heinz Wolff, Berlin, Germany; vested in the Attorney General of the United States
Application January 15, 1941, Serial No. 374,461
In Germany January 15, 1940
1 Claim. (Cl. 315—9)



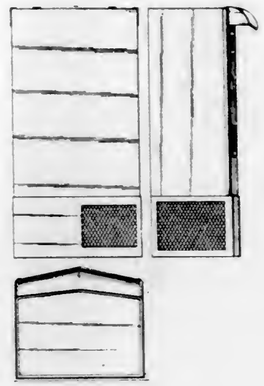
A device for producing light flashes consisting, in combination, of a cathode ray tube having a luminescent screen and a generator of short electrical pulses controlling the intensity of said ray, said generator comprising a source of an alternating voltage the frequency of which being the frequency of the required light impulses, a variable direct voltage source, a further cathode ray tube having a cathode, anode, elements for deflecting the cathode ray in the horizontal and in the vertical direction, two electrodes arranged in the direction of the cathode ray, the electrode next the cathode having an aperture the second electrode being connected in the circuit of the cathode in such a manner that current flows in it when the cathode ray strikes said second electrode, said alternating voltage source connected to one of said deflecting elements, the other pair of the deflecting elements being connected to said variable direct voltage source.

DESIGNS



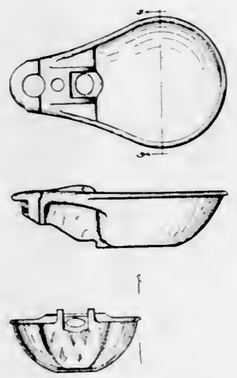
SEPTEMBER 14, 1948

150,915
DESIGN FOR A DISHWASHING APPLIANCE
Lloyd L. Anderson and Robert F. Hefferan, Grand Rapids, Mich., assignors to Paneva Corporation, Grand Rapids, Mich., a corporation of Michigan
Application March 1, 1948, Serial No. 144,848
Term of patent 14 years
(Cl. D9—2)



The ornamental design for a dishwashing appliance, substantially as shown.

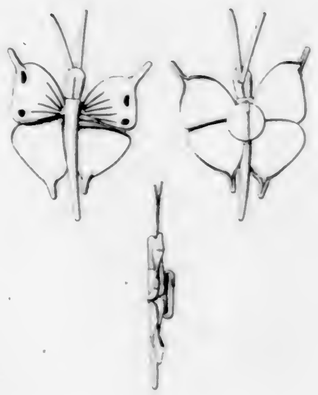
150,916
DESIGN FOR A BEVERAGE DISPENSING MACHINE
Leslie Arnett, Chicago, Ill., assignor to Square Manufacturing Company, a corporation of Illinois
Application August 5, 1946, Serial No. 132,288
Term of patent 14 years
(Cl. D52—3)



150,916—Continued

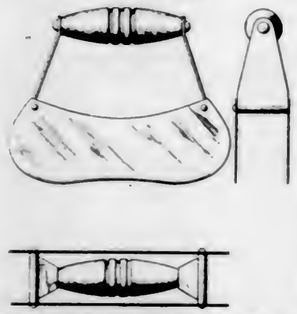
The ornamental design for a beverage dispensing machine, as shown.

150,917
DESIGN FOR A WATER BOWL FOR STOCK
Vernon R. Berg, Marshfield, Wis.
Application March 30, 1946, Serial No. 128,119
Term of patent 14 years
(Cl. D12—2)



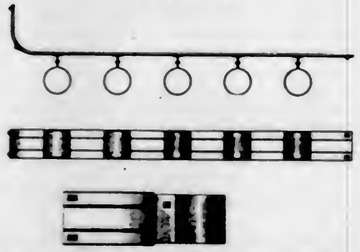
The ornamental design for a water bowl for stock, as shown.

150,918
DESIGN FOR A LAPEL ORNAMENT OR SIMILAR ARTICLE
Arthur Bernecker, Hempstead, N. Y.
Application July 25, 1947, Serial No. 140,509
Term of patent 7 years
(Cl. D45—19)



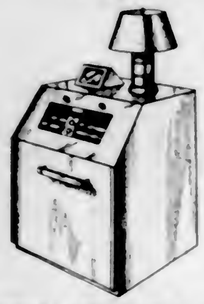
The ornamental design for a lapel ornament or similar article, as shown.

150,919
DESIGN FOR A LAPEL ORNAMENT OR SIMILAR ARTICLE
Arthur Bernecker, Hempstead, N. Y.
Application July 25, 1947, Serial No. 140,510
Term of patent 7 years
(Cl. D45—19)



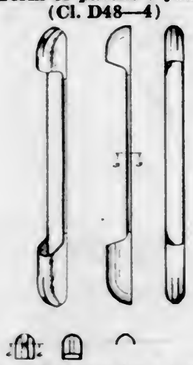
The ornamental design for a lapel ornament or similar article, as shown.

150,920
DESIGN FOR A FOOD MINCER
Mario A. Besozzi, Beechhurst, N. Y.
Application October 18, 1946, Serial No. 134,038
Term of patent 3½ years
(Cl. D89—1)



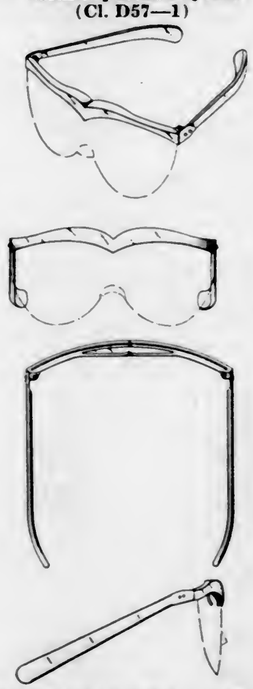
The ornamental design for a food mincer, substantially as shown.

150,921
DESIGN FOR A DRAPERY HANGER
William F. Binsack, Irondequoit, N. Y.
Application March 12, 1947, Serial No. 137,543
Term of patent 7 years
(Cl. D21—3)



The ornamental design for a drapery hanger, substantially as shown.

150,922
DESIGN FOR A COMBINED RADIO CABINET, CLOCK, AND LAMP
Albert C. Black, Los Angeles, Calif.
Application February 11, 1947, Serial No. 136,830
Term of patent 3½ years
(Cl. D56—4)

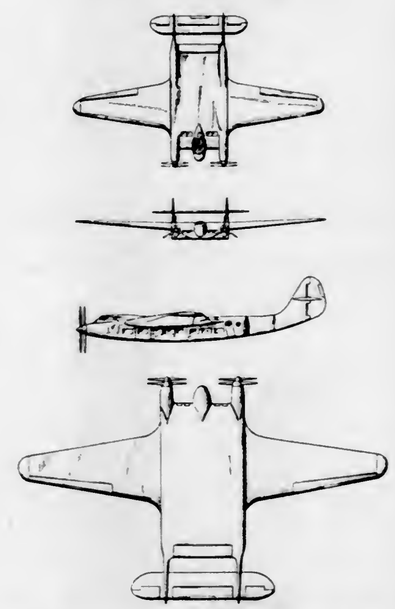


The ornamental design for a combined radio cabinet, clock, and lamp, as shown.

150,923
DESIGN FOR A TUBE LAMP FIXTURE
Allen O. Boutelle, Jefferson, and Robert C. Kuder, Fort Atkinson, Wis., assignors to Moe Brothers Manufacturing Company, Fort Atkinson, Wis., a corporation of Wisconsin
Application June 12, 1947, Serial No. 139,608
Term of patent 7 years
(Cl. D48—4)

The ornamental design for a tube lamp fixture, as shown and described.

150,924
DESIGN FOR SUN SPECTACLES
Roy L. Bright, Buffalo, N. Y., assignor to Du Bois Plastic Products, Inc., Buffalo, N. Y., a corporation of New York
Application April 18, 1947, Serial No. 138,472
Term of patent 14 years
(Cl. D57—1)

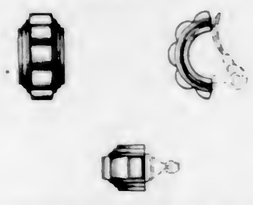


The ornamental design for sun spectacles, substantially as shown and described.

150,925
DESIGN FOR A RADIO CABINET
Robert D. Budlong, Skokie, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application December 10, 1947, Serial No. 143,094
Term of patent 14 years
(Cl. D56—4)

The ornamental design for a radio cabinet, as shown and described.

150,926
DESIGN FOR A TRANSPORT AIRPLANE
Vincent J. Burnelli, Red Bank, N. J.
Application March 6, 1946, Serial No. 127,154
Term of patent 14 years
(Cl. D71—1)



The ornamental design for a transport airplane, as shown.

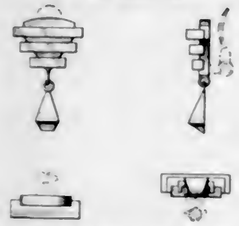
150,927
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,405
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,928
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,407
Term of patent 7 years
(Cl. D45—9)

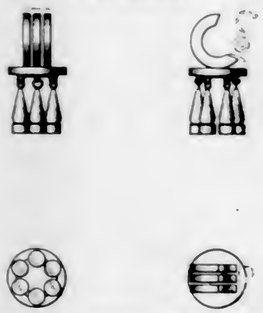
The ornamental design for an earring or similar article, substantially as shown.

150,929
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,408
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,930
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,409
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,931
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,410
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,932
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,411
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

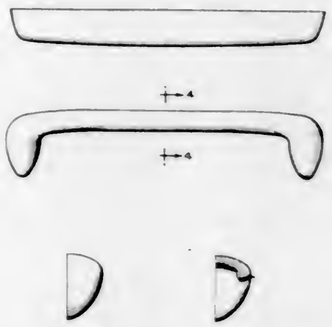
150,933
DESIGN FOR A HOUSING FOR A SPACE HEATER
Harry J. Clark, Monrovia, Calif.
Application March 1, 1947, Serial No. 137,258
Term of patent 3½ years
(Cl. D81—19)

The ornamental design for a housing for a space heater, substantially as shown and described.

150,934
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,409
Term of patent 3½ years
(Cl. D3—4)

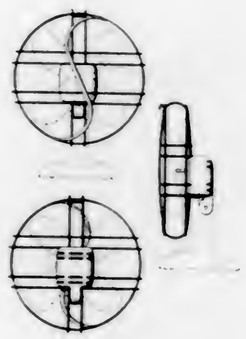
The ornamental design for a suit, substantially as shown.

150,935
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,410
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a suit, substantially as shown.

150,936
DESIGN FOR A COMBINATION ORANGE JUICER AND LIQUEFYING UNIT
Benjamin Cooper, New York, N. Y., Albert F. Hohmann, Teaneck, N. J., and Alfons Bach, Stamford, Conn., said Hohmann and said Bach assignors to said Cooper
Application February 1, 1947, Serial No. 136,611
Term of patent 14 years
(Cl. D89—1)

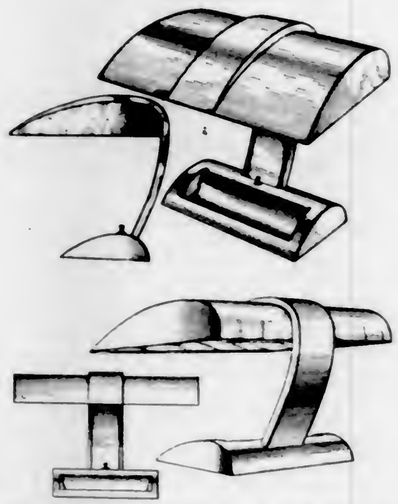


The ornamental design for a combination orange juicer and liquefying unit, as shown.

150,937
DESIGN FOR A HANDLE FOR COOKSTOVE OVEN DOORS
Montgomery Ferar, Detroit, Mich., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application April 11, 1947, Serial No. 138,319
Term of patent 7 years
(Cl. D81—25)

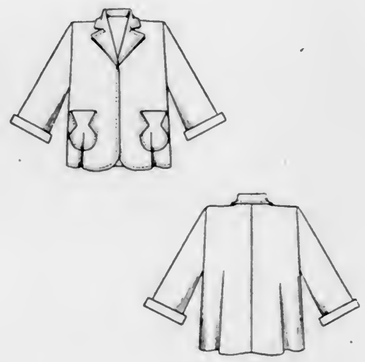
The ornamental design for a handle for cookstove oven doors, substantially as shown.

150,938
DESIGN FOR AN ELECTRIC FAN
Edmund W. Fruit, Chicago, Ill., assignor to R. T. Welsh, James E. Welsh, and Edmund W. Fruit, a partnership, doing business as J. Edmund Regor Company, Rockford, Ill.
Application March 10, 1947, Serial No. 137,475
Term of patent 7 years
(Cl. D26—7)



The ornamental design for an electric fan, substantially as shown and described.

150,939
DESIGN FOR AN ELECTRIC ORGAN
Paul M. Fuller, Buffalo, N. Y., assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y., a corporation of Ohio
Application May 28, 1947, Serial No. 139,333
Term of patent 7 years
(Cl. D56—2)



The ornamental design for an electric organ, substantially as shown.

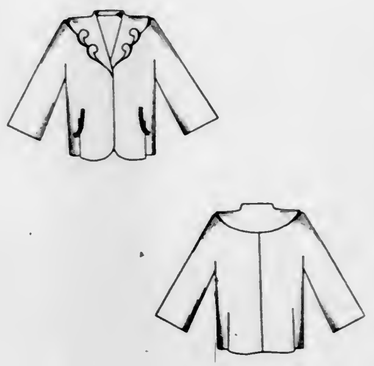
150,940
DESIGN FOR A DESK LAMP OR THE LIKE
Herman L. Goebel, Chicago, Ill., assignor to Mitchell Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application September 4, 1946, Serial No. 133,048
Term of patent 14 years
(Cl. D48—20)

The ornamental design for a desk lamp or the like, as shown.

150,941
DESIGN FOR A JACKET
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,412
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a jacket, substantially as shown.

150,942
DESIGN FOR A JACKET
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,413
Term of patent 3½ years
(Cl. D3—4)

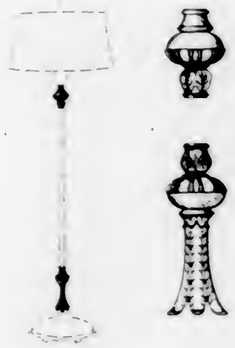


The ornamental design for a jacket, substantially as shown.

150,943
DESIGN FOR A JACKET
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,415
Term of patent 3½ years
(Cl. D3—4)

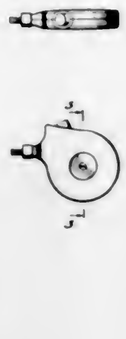
The ornamental design for a jacket, substantially as shown.

150,944
DESIGN FOR A JACKET
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,418
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a jacket, substantially as shown.

150,945
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,419
Term of patent 3½ years
(Cl. D3—4)

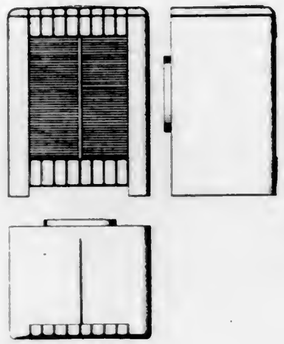


The ornamental design for a coat, substantially as shown.

150,946
DESIGN FOR A LAMP FIXTURE
Irving I. Gotliffe, New York, N. Y., assignor to Admiral Lamp Mfg. Corp., Chicago, Ill., a corporation of Illinois
Application April 14, 1947, Serial No. 138,351
Term of patent 7 years
(Cl. D48—20)

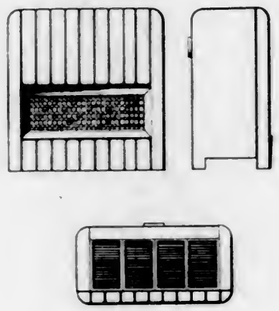
The ornamental design for a lamp fixture, substantially as shown and described.

150,947
DESIGN FOR A LEASH REEL HOUSING
Matthew R. Grandon, Beverly Hills, and Bruce Burns, Los Angeles, Calif.
Application July 19, 1946, Serial No. 131,708
Term of patent 3½ years
(Cl. D38—6)



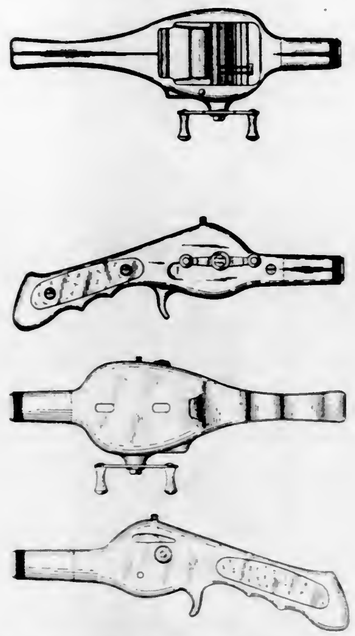
The ornamental design for a leash reel housing, substantially as shown.

150,948
DESIGN FOR A NONMETALLIC TEMPLE FOR SPECTACLES OR SIMILAR ARTICLE
Julius E. Hansen, Providence, R. I., assignor to Bay State Optical Company, Attleboro, Mass., a corporation of Maine
Application March 18, 1947, Serial No. 137,695
Term of patent 14 years
(Cl. D57—1)



The ornamental design for a non-metallic temple for spectacles or similar article, substantially as shown.

150,949
DESIGN FOR A HEATER
Frederick Donald Hart, Nashville, Tenn., assignor to Tennessee Enamel Manufacturing Co., Nashville, Tenn., a corporation of Tennessee
Application October 30, 1947, Serial No. 142,227
Term of patent 14 years
(Cl. D81—19)

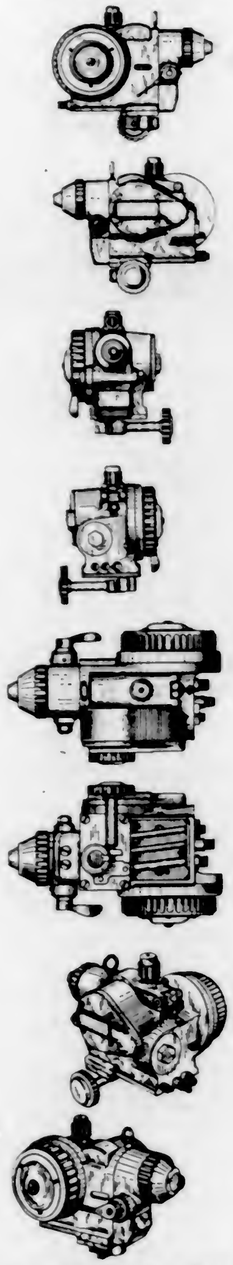


The ornamental design for a heater, as shown and described.

150,950
DESIGN FOR A HEATER
Frederick Donald Hart, Nashville, Tenn., assignor to Tennessee Enamel Manufacturing Co., Nashville, Tenn., a corporation of Tennessee
Application October 30, 1947, Serial No. 142,228
Term of patent 14 years
(Cl. D81—19)

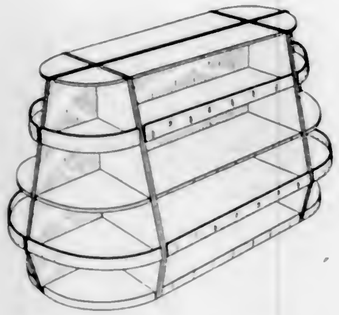
The ornamental design for a heater, as shown and described.

150,951
DESIGN FOR A COMBINED FISHING ROD HANDLE AND REEL
Carson E. Hill, Ferndale, Mich.
Application June 27, 1946, Serial No. 131,068
Term of patent 7 years
(Cl. D31—4)



The ornamental design for a combined fishing rod handle and reel, substantially as shown.

150,952
DESIGN FOR A RING OR SIMILAR ARTICLE
Anton Hoeckele, Providence, R. I., assignor to Clark & Coombs Company, a corporation of Rhode Island
Application August 23, 1947, Serial No. 141,023
Term of patent 7 years
(Cl. D45—10)

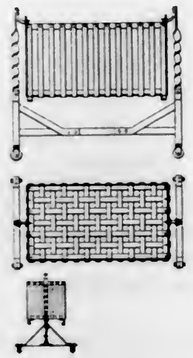


The ornamental design for a ring or similar article, substantially as shown and described.

150,953
DESIGN FOR A HEAT FUSIBLE MATERIAL SPRAY GUN
Herbert S. Ingham, Roslyn Estates, N. Y.
Application October 5, 1946, Serial No. 133,801
Term of patent 14 years
(Cl. D62—2)

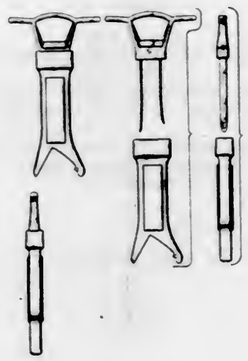
The ornamental design for a heat fusible material spray gun, substantially as shown.

150,954
DESIGN FOR A SECTIONAL DISPLAY STAND UNIT
Neel S. Irwin, Weaverville, N. C.
Application July 26, 1946, Serial No. 131,985
Term of patent 14 years
(Cl. D80—9)



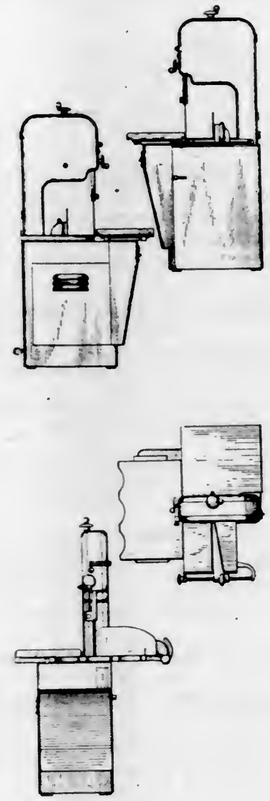
The ornamental design for a sectional display stand unit, as shown.

150,955
DESIGN FOR A KNIFE SHARPENER
Earl E. Jacobs, Dayton, Ohio
Application August 15, 1946, Serial No. 132,554
Term of patent 14 years
(Cl. D37—1)



The ornamental design for a knife sharpener, substantially as shown and described.

150,956
DESIGN FOR A CRADLE
Frank E. Kabase, Birmingham, Ala.
Application July 18, 1946, Serial No. 131,674
Term of patent 14 years
Cl. D5—5)



The ornamental design for a cradle, substantially as shown.

150,957
DESIGN FOR A COMBINED BOTTLE OPENER AND CORK REMOVER
Fritz Kahlen, New York, and Peter P. Jordan, Jackson Heights, N. Y.; said Jordan assignor to said Kahlen
Application January 2, 1947, Serial No. 135,903
Term of patent 14 years
(Cl. D44—29)

The ornamental design for a combined bottle opener and cork remover, as shown.

150,958
DESIGN FOR A MEAT SAW
Edward C. Karp, Belvidere, Ill.
Application August 5, 1946, Serial No. 132,292
Term of patent 14 years
(Cl. D55—1)

The ornamental design for a meat saw, as shown.

150,959
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,147
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

150,960
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,780
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,961
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,783
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,962
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,785
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,963
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,787
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,964
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,790
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,965
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,793
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,966
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,794
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

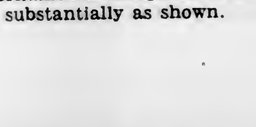
150,967
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,795
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,968
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,796
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,969
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,797
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,970
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,933
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,971
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,935
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,972
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 22, 1948, Serial No. 143,961
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,973
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 22, 1948, Serial No. 143,962
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,974
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 22, 1948, Serial No. 143,963
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

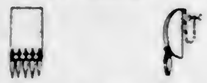
150,975
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,090
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,976
DESIGN FOR A CLIP OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,091
Term of patent 7 years
(Cl. D45—19)

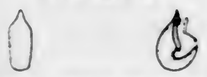
The ornamental design for a clip or similar article, substantially as shown.

150,977
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,092
Term of patent 7 years
(Cl. D45—19)



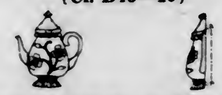
The ornamental design for a brooch or similar article, substantially as shown.

150,978
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,093
Term of patent 7 years
(Cl. D45—19)



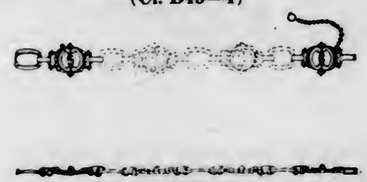
The ornamental design for a brooch or similar article, substantially as shown.

150,979
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,094
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,980
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,095
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,981
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,098
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,982
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 30, 1948, Serial No. 144,161
Term of patent 7 years
(Cl. D45—4)

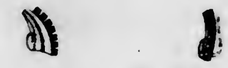
The ornamental design for a bracelet or similar article, substantially as shown and described.

150,983
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 30, 1948, Serial No. 144,168
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

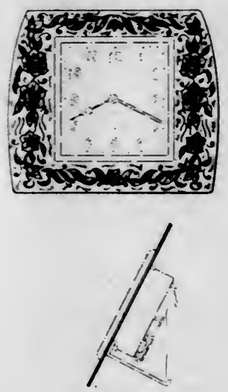
150,984
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 30, 1948, Serial No. 144,169
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.



614 O. G.—35

150,985
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 30, 1948, Serial No. 144,170
Term of patent 7 years
(Cl. D45—19)

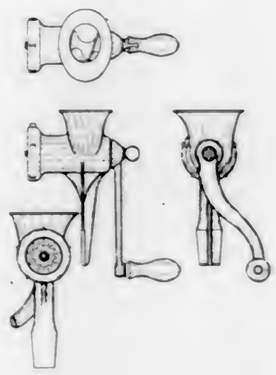


The ornamental design for a brooch or similar article, substantially as shown.

150,986
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 30, 1948, Serial No. 144,171
Term of patent 7 years
(Cl. D45—9)

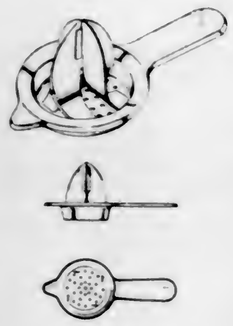
The ornamental design for an earring or similar article, substantially as shown.

150,987
DESIGN FOR A COMBINED CLOCK AND SUPPORTING EASEL THEREFOR
Samuel J. Kaufman, New York, N. Y.
Application March 22, 1948, Serial No. 145,265
Term of patent 3½ years
(Cl. D42—7)



The ornamental design for a combined clock and supporting easel therefor, substantially as shown and described.

150,988
DESIGN FOR A FISH LURE
Arthur Clifford Kinard, El Dorado, Ark., assignor of one-half to L. L. Pyle, El Dorado, Ark.
Application June 28, 1946, Serial No. 131,137
Term of patent 14 years
(Cl. D31—4)

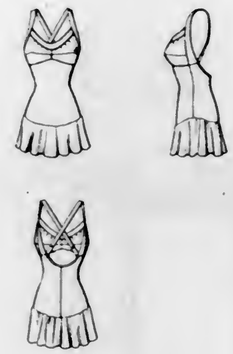


The ornamental design for a fish lure, as shown and described.

150,989
DESIGN FOR A FOOD CHOPPER AND GRINDER
Herbert J. Kline, Jackson, Mich., assignor, by mesne assignments, to National Die Casting Company, Chicago, Ill., a corporation of Illinois
Application June 28, 1946, Serial No. 131,128
Term of patent 14 years
(Cl. D89—1)

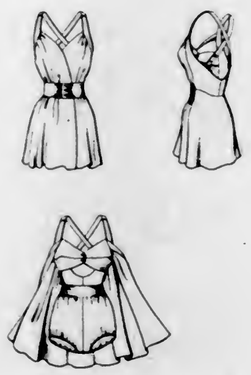
The ornamental design for a food chopper and grinder, as shown.

150,990
DESIGN FOR A COMBINED FRUIT REAMER AND STRAINER
Carl G. Krieger, Mason City, Iowa
Application April 18, 1947, Serial No. 138,475
Term of patent 14 years
(Cl. D89—1)



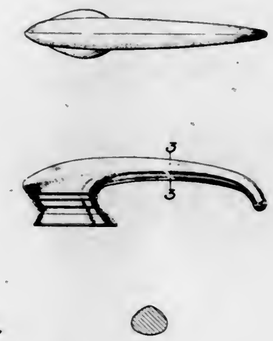
The ornamental design for a combined fruit reamer and strainer, as shown.

150,991
DESIGN FOR A TWO-PIECE SWIM SUIT
Margit Fellegi Laszlo, Los Angeles, Calif., assignor to Cole of California, Inc., a corporation of California
Application March 25, 1947, Serial No. 137,874
Term of patent 7 years
(Cl. D3—17)



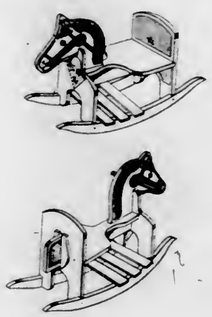
The ornamental design for a two-piece swim suit, as shown.

150,992
DESIGN FOR A SWIM SUIT
Margit Fellegi Laszlo, Los Angeles, Calif., assignor to Cole of California, Inc., a corporation of California
Application March 25, 1947, Serial No. 137,875
Term of patent 7 years
(Cl. D3—17)



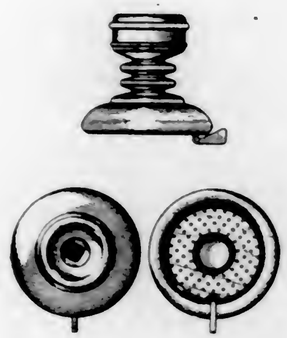
The ornamental design for a swim suit, as shown.

150,993
DESIGN FOR A PLAY SUIT
Margit Fellegi Laszlo, Los Angeles, Calif., assignor to Cole of California, Inc., a corporation of California
Application March 25, 1947, Serial No. 137,876
Term of patent 7 years
(Cl. D3—17)



The ornamental design for a play suit, as shown.

150,994
DESIGN FOR AN OUTSIDE DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE
Henry de S. Lauve, Huntington Woods, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 3, 1947, Serial No. 135,928.
Term of patent 7 years
(Cl. D10—8)



The ornamental design for an outside door handle or similar article for an automotive vehicle, substantially as shown.

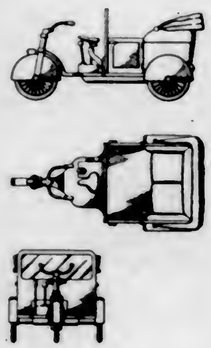
150,995
DESIGN FOR A ROCKING HORSE
Carlton O. Leftwich, Lynchburg, Va.
Application May 21, 1946, Serial No. 129,965
Term of patent 14 years
(Cl. D34—15)

The ornamental design for a rocking horse, as shown.

150,996
DESIGN FOR A FAUCET ATTACHMENT
Carl E. Lehman, Evanston, Ill.
Application April 29, 1947, Serial No. 138,692
Term of patent 14 years
(Cl. D91—3)

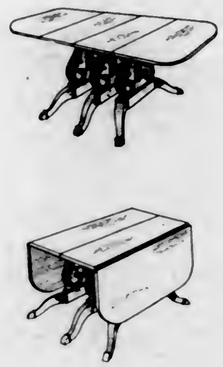
The ornamental design for a faucet attachment, as shown.

150,997
DESIGN FOR A LECTERN
Albert T. Long, Baltimore, Md.
Application July 24, 1947, Serial No. 140,489
Term of patent 14 years
(Cl. D33—10)



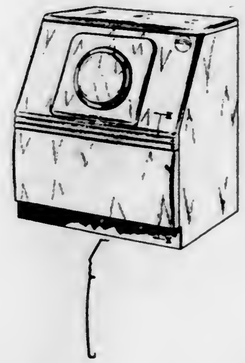
The ornamental design for a lectern, as shown.

150,998
DESIGN FOR A CABINET FOR SOUND RECEIVING AND TRANSMITTING APPARATUS
Fred L. Meagher, New York, N. Y., assignor to Jordanoff Corporation, New York, N. Y., a corporation of New York
Application September 12, 1947, Serial No. 141,345
Term of patent 3½ years
(Cl. D56—4)



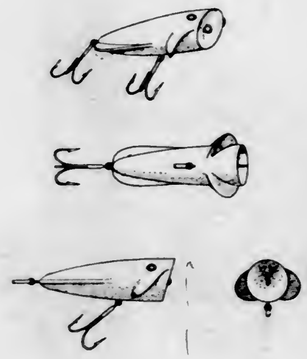
The ornamental design for a cabinet for sound receiving and transmitting apparatus, substantially as shown.

150,999
DESIGN FOR A MOTOR VEHICLE
Gregory Miller and Monte Sinderman, Los Angeles, Calif.
Application October 14, 1946, Serial No. 133,944
Term of patent 3½ years
(Cl. D14—3)



The ornamental design for a motor vehicle, as shown and described.

151,000
DESIGN FOR A DROP-LEAF EXTENSION TABLE
Cedric E. Millspaugh, Westlake, Ohio, assignor to Union-National, Inc., Jamestown, N. Y., a corporation of New York
Application March 27, 1947, Serial No. 137,939
Term of patent 14 years
(Cl. D33—14)

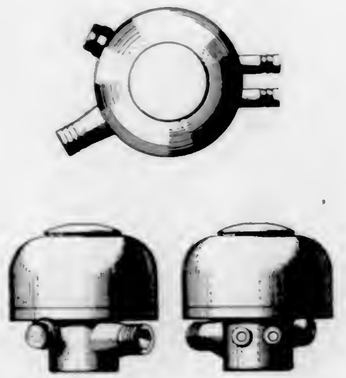


The ornamental design for a drop-leaf extension table, substantially as shown.

151,001
DESIGN FOR A LAUNDRY MACHINE
Frederick W. Perl, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application December 18, 1947, Serial No. 143,213
Term of patent 14 years
(Cl. D49—1)

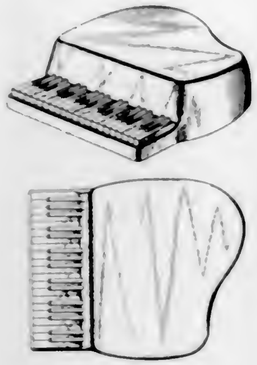
The opposite end of the laundry machine not in view is similar in appearance to the end shown.

151,002
DESIGN FOR AN ARTIFICIAL BAIT
William L. Raschke, Fort Worth, Tex.
Application November 25, 1946, Serial No. 135,049
Term of patent 7 years
(Cl. D31—4)



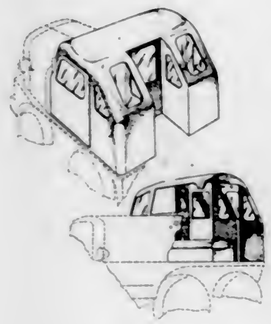
The ornamental design for an artificial bait, substantially as shown.

151,003
DESIGN FOR A MILKING MACHINE CLAW
Emanuel Rawson, Chicago, Ill.
Application October 17, 1946, Serial No. 134,010
Term of patent 3½ years
(Cl. D23—1)



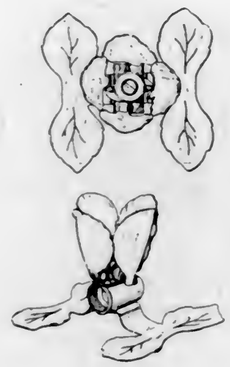
The ornamental design for a milking machine claw, substantially as shown.

151,004
DESIGN FOR A MILKING MACHINE PULSATOR
Emanuel Rawson, Chicago, Ill.
Application October 24, 1946, Serial No. 134,211
Term of patent 3½ years
(Cl. D23—1)



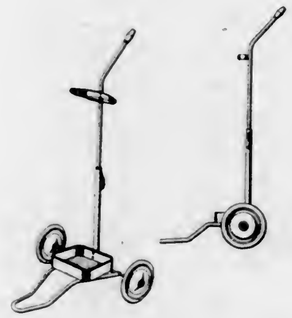
The ornamental design for a milking machine pulsator, substantially as shown.

151,005
DESIGN FOR A MINIATURE PIANO
Harold B. Rhodes, Hollywood, Calif.
Application October 25, 1946, Serial No. 134,243
Term of patent 14 years
(Cl. D56—9)



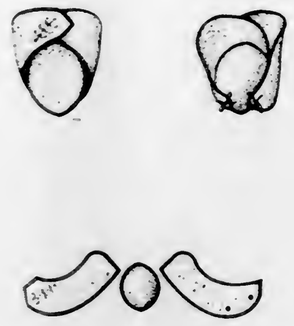
The ornamental design for a miniature piano, substantially as shown.

151,006
DESIGN FOR A MOTOR POWER VEHICLE CAB
Emery Rossner, Brooklyn, N. Y., assignor to Milford Crane & Machine Co., Milford, Conn., a corporation of Connecticut
Application October 19, 1946, Serial No. 134,084
Term of patent 14 years
(Cl. D14—3)



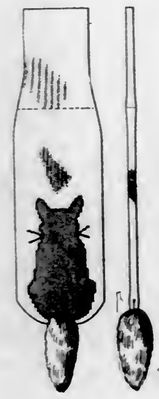
The ornamental design for a motor power vehicle cab, substantially as shown and described.

151,007
DESIGN FOR A LAWN SPRINKLER
Corey L. Russell, Milwaukee, Wis.
Application February 17, 1947, Serial No. 136,949
Term of patent 14 years
(Cl. D91—1)



The ornamental design for a lawn sprinkler, substantially as shown.

151,008
DESIGN FOR A GOLF BAG CARRIER
Carl T. Rycraft, Burbank, Calif.
Application May 20, 1946, Serial No. 129,914
Term of patent 7 years
(Cl. D14—3)

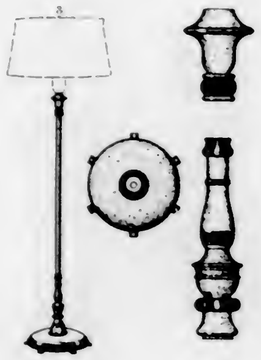


The ornamental design for a golf bag carrier, substantially as shown.

151,009
DESIGN FOR A HAT
Ella Sawtell, Portland, Oreg.
Application October 28, 1946, Serial No. 134,321
Term of patent 7 years
(Cl. D3—13)

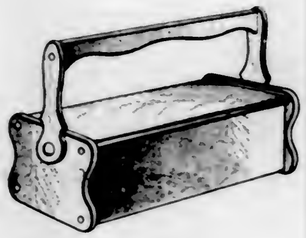
The ornamental design for a hat, substantially as shown.

151,010
DESIGN FOR A CAP
Walter E. Schuessler, Chicago, Ill., assignor to Schuessler Knitting Mills, Inc., Chicago, Ill., a corporation of Illinois
Application March 31, 1947, Serial No. 138,054
Term of patent 7 years
(Cl. D3—13)



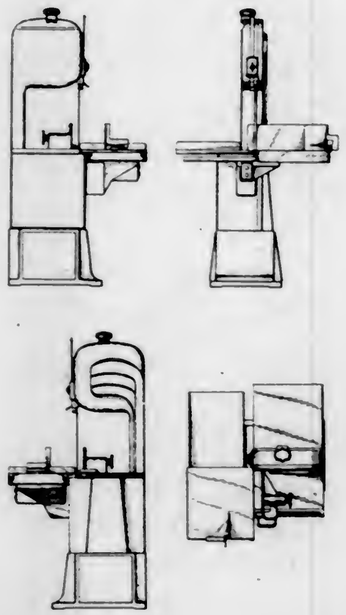
The ornamental design for a cap, as shown and described.

151,011
DESIGN FOR A CAP
Walter E. Schuessler, Chicago, Ill., assignor to Schuessler Knitting Mills, Inc., Chicago, Ill., a corporation of Illinois
Application March 31, 1947, Serial No. 138,055
Term of patent 7 years
(Cl. D3—13)



The ornamental design for a cap, as shown and described.

151,012
DESIGN FOR A LAMP FIXTURE
Frederick Schwartz, Chicago, Ill.
Application April 14, 1947, Serial No. 138,349
Term of patent 7 years
(Cl. D48—20)



The ornamental design for a lamp fixture, substantially as shown and described.

151,013
DESIGN FOR A SEWING CABINET
Edmond J. Spence, New York, N. Y., assignor to Selrite, Inc., New York, N. Y., a corporation of New York
Application October 25, 1946, Serial No. 134,227
Term of patent 3½ years
(Cl. D3—19)

The ornamental design for a sewing cabinet, substantially as shown, and described.

151,014
DESIGN FOR A MEAT CUTTING MACHINE
Ezekiel C. Steiner, Los Angeles, Calif.
Application October 12, 1946, Serial No. 133,913
Term of patent 3½ years
(Cl. D55—1)

The ornamental design for a meat cutting machine, substantially as shown.

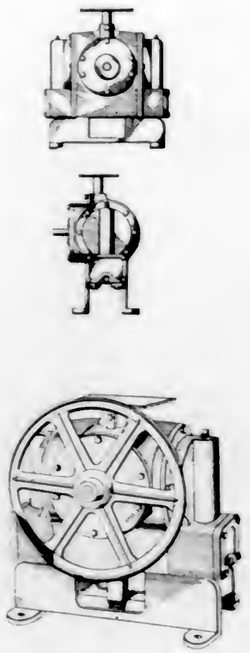
151,015
DESIGN FOR A PORTABLE ELECTRIC HEATER
Harry L. Stiles, Chicago, Ill., assignor to Chicago Electric Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application October 10, 1947, Serial No. 141,856
Term of patent 14 years
(Cl. D81—19)

The ornamental design for a portable electric heater, as shown.

151,016
DESIGN FOR A SUIT
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,751
Term of patent 3½ years
(Cl. 3—4)

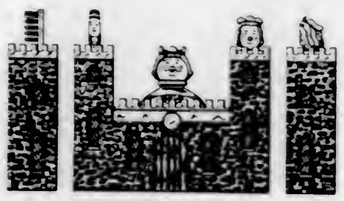
The ornamental design for a suit, substantially as shown.

151,017
DESIGN FOR A SUIT
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,754
Term of patent 3½ years
(Cl. 3—4)



The ornamental design for a suit, substantially as shown.

151,018
DESIGN FOR A SUIT
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,755
Term of patent 3½ years
(Cl. 3—4)

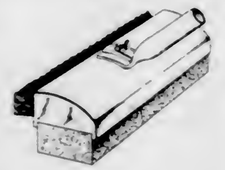


The ornamental design for a suit, substantially as shown.

151,019
DESIGN FOR A WELL PUMP
Elmer E. Theis, Memphis, Tenn., assignor to Ace Pump Corporation, Memphis, Tenn., a corporation of Tennessee
Application April 11, 1946, Serial No. 128,487
Term of patent 3½ years
(Cl. D65—1)

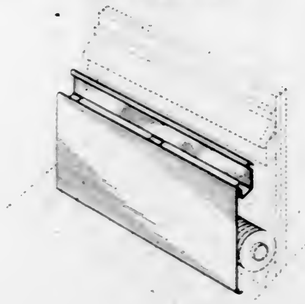
The ornamental design for a well pump, substantially as shown and described.

151,020
DESIGN FOR A DENTAL SUPPLY KIT
Katharine G. Van Dyk, Scarsdale, N. Y.
Application July 30, 1946, Serial No. 132,114
Term of patent 14 years
(Cl. D58—14)

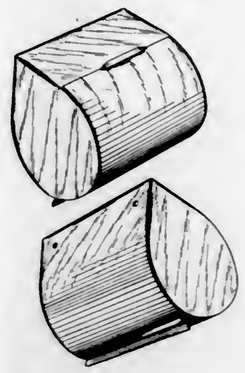


151,020—Continued

The ornamental design for a dental supply kit, as shown and described.



151,021
DESIGN FOR A COMBINATION MOPHEAD UNIT
Peter S. Vosbikian and Thomas S. Vosbikian, Melrose, Pa.
Application December 6, 1947, Serial No. 143,001
Term of patent 14 years
(Cl. D9—2)



The ornamental design for a combination mop head unit, as shown and described.

151,022
DESIGN FOR A BASEBOARD RADIATOR SHIELD UNIT
Henry J. Weber, Franklinville, and Donald F. Bennett, Haddonfield, N. J., assignors to Warren Webster & Company, Camden, N. J., a corporation of New Jersey
Application July 26, 1946, Serial No. 132,009
Term of patent 7 years
(Cl. D81—21)

The ornamental design for a baseboard radiator shield unit, substantially as shown.

151,023
DESIGN FOR A TOILET ROLL RECEPTACLE
John N. Wood, Media, Pa.
Application October 28, 1946, Serial No. 134,329
Term of patent 14 years
(Cl. D4—3)

The ornamental design for a toilet roll receptacle, as shown.

Condition of Applications Under Examination at Close of Business Aug. 31, 1948

Total number of patent applications awaiting action, 155,654. Date of oldest new application, September 20, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	3-19-47	1-23-47	2855
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	1-2-47	8-12-46	3072
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	11-4-47	11-7-47	1472
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	1-2-47	2-8-47	3960
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	1-27-47	9-3-46	1861
6. SURLE, H., Carbon Chemistry (part)	9-24-47	8-9-47	1848
7. HANLIN, GEORGE, Optics; Photographic Apparatus	12-1-47	7-21-47	1683
8. LEWIS, R. O. (Acting), Furniture; Racks and Cabinets	11-15-46	7-16-46	4413
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	6-5-47	1-7-47	2236
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	12-6-47	11-12-47	1714
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	11-18-46	12-22-47	766
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	9-24-47	9-6-46	2139
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	9-20-46	9-3-46	2422
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	11-8-47	9-3-47	1374
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	6-7-47	2-12-47	2105
16. LOVEWELL, N. N., Television; Telephony	10-15-47	6-12-47	1482
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	2-27-47	9-18-46	2104
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combusion Engines.	6-12-47	8-28-46	1982
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	7-19-47	12-4-46	1946
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	3-10-47	11-18-46	2026
21. MADER, R. C., Textiles	10-11-47	8-7-47	1211
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	10-2-47	11-13-46	1751
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	9-6-47	7-24-46	1245
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	8-25-47	8-5-47	2606
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	9-20-47	1-20-47	1776
26. YOUNG, R. R., Electricity—Generation and Motive Power	12-4-47	11-20-46	1330
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	6-16-47	12-4-46	3400
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	7-24-47	7-30-47	1098
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	2-4-47	1-9-47	3179
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	12-1-47	7-5-47	1309
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	12-11-47	12-9-47	2176
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	2-29-47	9-20-46	3220
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	1-2-47	9-5-46	3509
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	12-31-46	8-19-46	1546
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	4-17-47	10-17-46	3269
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	11-4-46	9-9-46	1965
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	10-27-47	2-7-47	1421
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	6-3-47	4-19-47	1901
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	3-7-47	7-27-46	3004
40. DRUMMOND, E. J., Receptacles (part); Packages	10-17-47	10-16-46	3253
41. HERTZ, M., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	1-8-47	9-4-46	2353
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	12-11-47	10-17-47	1195
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	11-12-47	10-10-47	1352
44. HARVEY, L. P., Refrigeration; Preserving	9-28-46	7-22-46	1102
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	2-7-47	9-23-46	2934
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	5-17-47	8-2-46	1893

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 155,654. Date of oldest new application, September 20, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	11-26-47	6-21-47	2206
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	12-1-47	2-24-47	1564
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	1-3-47	5-28-47	1548
50. LEVIN, SAMUEL, Synthetic Resins	11-24-47	7-9-47	2200
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	12-1-47	5-6-47	1835
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	9-22-47	12-9-46	3872
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	3-7-47	8-5-46	3676
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	12-2-47	6-13-47	1794
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	7-1-47	5-15-47	2007
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	10-21-47	10-8-47	1058
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys.	11-2-46	8-24-46	3630
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	12-17-46	10-24-46	2150
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	7-22-47	3-10-47	1981
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	12-16 47	5-7-47	1450
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	11-29-46	6-7-46	3577
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	4-2-47	9-3-46	1975
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	9-8-47	7-3-47	1499
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	1-26-48	1-22-48	1649
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	12-3-47	5-27-47	2078
66. LISANN, L., Geometrical Instruments	3-29-47	4-16-46	2111
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	6-21-47	4-12-47	2064
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	12-18-47	6-17-47	1469
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	5-8-47	11-1-46	1766
DESIGNS: BREHM, G. L.	1-2-47	1-2-48	7867

Total number of trade-mark applications awaiting action (including renewals and republications), 40,802. Date of oldest new application, Aug. 19, 1947; date of oldest amended application, Mar. 5, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	11-28-47	6-10-48	3108
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	9-15-47	3-16-48	5469
3. SUMMERS, G. S., Classes 13, 21, 23, 26	8-19-47	3-22-48	4721
4. BARR, E., Classes 3, 7, 39, 40, 41, 42, 43	9-23-47	3-24-48	4476
5. RACKNOR, M., Classes 8, 17, 20 24, 25, 32, 37, 38, 45, 47, 48, 49	10-1-47	3-11-48	3479
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	11-14-47	6-5-48	3340
7. KEYS, O. M., Classes 16, 19, 55	9-2-47	3-5-48	2225
8. GEDIMAN, H. W. {Renewals / Republications} All Classes	7-8-48	8-7-48	73
	10-6-47	8-10-48	13911

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Ackerman-Johnson Co., Chicago, Ill. Fastening devices. Serial No. 527,543, Sept. 21. Class 13.

Acme Backing Corporation, New York and Brooklyn, N. Y. Processed cotton drill fabric. Serial No. 499,306, Sept. 21. Class 42.

Acme Plastic Henger Co., Inc., Brooklyn, N. Y. Plastic garment hangers. Serial No. 543,376, Sept. 21. Class 50.

Advance Electric and Relay Co., Los Angeles, Calif. Battery chargers. Serial No. 544,679, Sept. 21. Class 21.

Airadio, Incorporated, Stamford, Conn. Radio receivers, transmitters, electrical sound recording apparatus, etc. Serial No. 534,859, Sept. 21. Class 21.

Aktiebolaget Mölnbacka A-Trysil, Forshaga, Sweden. Bleached sulphite pulp for the manufacture of paper and rayon. Serial No. 490,616, Sept. 21. Class 1.

CLASS 11

Carbon paper, inked ribbon, manifolding carbon, etc. Standard Manifold Company. 364,547, Feb. 7, 1939. Republished Sept. 21.
Ink pads, rubber-stamp ink, and numbering machine ink. Office Specialties Co. 222,708, renewed Jan. 4, 1947. O. G. Sept. 21.

CLASS 12

Asphalt compounds. Union Products Company. 246,875, renewed Sept. 18, 1948. O. G. Sept. 21.
Asphalt felt roll roofing and shingles. Western Auto Supply Company. 407,670, June 20, 1944. Republished Sept. 21.
Cedar poles, Treated. National Pole and Treating Company. 386,256, Apr. 1, 1941. Republished Sept. 21.
Cement, Portland. Northwestern States Portland Cement Co. 70,578, re-renewed Sept. 15, 1948. O. G. Sept. 21.
Cement, Portland. Standard Portland Cement Company. 235,387, Nov. 15, 1927. Republished Sept. 21.
Fiber board. Insulite Company. 387,134, May 6, 1941. Republished Sept. 21.
Insulation material, Fire-proofed cotton sheet. Lockport Cotton Batting Co. 401,062, Apr. 20, 1943. Republished Sept. 21.
Lathe, Wire. Pittsburgh Steel Company. 245,545, renewed Aug. 14, 1948. O. G. Sept. 21.
Lime, lump lime, and pulverized quicklime, Masons' hydrated. Ladd Lime and Stone Company. 364,702, Feb. 14, 1939. Republished Sept. 21.
Mortar, Masonry. Ladd Lime & Stone Co. 367,817, May 30, 1939. Republished Sept. 21.
Plaster, Patching. Rutland Fire Clay Co. 161,832, Nov. 21, 1922. Republished Sept. 21.
Reenforcement material for plaster and cement. National Steel Fabric Company. 236,844, Dec. 27, 1927. Republished Sept. 21.
Refractory materials. Exolon Company. 214,323, June 22, 1926. Republished Sept. 21.
Screens, Window. National Screen Company, Inc. 432,109, Aug. 19, 1947. Republished Sept. 21.

CLASS 13

Bindings, binder bars, caps and edgings, Metal and plastic. Kinkead Industries Incorporated. 502,231, Sept. 21; Serial No. 506,245, published June 29, 1948.
Box strapping, Metal. Darling Valve & Manufacturing Company. 410,910, Dec. 26, 1944. Republished Sept. 21.
Brackets, Window shade. Luther O. Draper Shade Company. 440,678, Sept. 21; Serial No. 484,561, published June 29, 1948.
Closet elbows, connections, and sleeves, rubber tank-balls, Rubber, etc. Wolverine Brass Works. 69,313, re-renewed June 2, 1948. O. G. Sept. 21.
Coffee urns, brewers, percolators, etc. S. D. Levings. 440,712, Sept. 21; Serial No. 515,230, published June 29, 1948.
Couplings, Belt. Greene, Tweed & Co. 51,556, Apr. 17, 1906. Republished Sept. 21.
Couplings, Metallic hose. Flex-O-Tube Co. 340,238, Nov. 3, 1936. Republished Sept. 21.
Drinking fountains and parts thereof. Puro Sanitary Drinking Fountain Co. 120,218, Jan. 15, 1918. Republished Sept. 21.
Hose with faucet and drain attachments, Drain flushing. G. A. Norman. 440,715, Sept. 21; Serial No. 516,209, published June 29, 1948.
Kitchen ware, Aluminum. Kent Foundry Company. 440,684, Sept. 21; Serial No. 496,086, published June 29, 1948.

Leg leveler in the nature of a self-adjusting glider. Furniture. Blake Industries. 502,308, Sept. 21; Serial No. 529,349, published June 15, 1948.
Mixing bowls, dish pans, sauce pans, etc. Columbian Enameling and Stamping Co., Inc. 502,287, Sept. 21; Serial No. 528,013, published June 22, 1948.
Nails and staples. Dickson Weatherproof Nail Co. 502,226, Sept. 21; Serial No. 486,405, published June 15, 1948.
Pipe hangers. Piping Specialties, Inc. 440,722, Sept. 21; Serial No. 518,101, published June 15, 1948.
Pipes or conduits, Irrigation, water, liquid, sewer and fluid. Southern Industries. 440,692, Sept. 21; Serial No. 506,480, published June 29, 1948.
Pipes, tubes, fittings, etc. Carbon and graphite. National Carbon Company, Inc. 440,741, Sept. 21; Serial No. 525,371, published June 15, 1948.
Slide fasteners. Talon, Inc. 502,281, Sept. 21; Serial No. 527,879, published June 15, 1948.
Slide fasteners. Talon, Inc. 502,283, Sept. 21; Serial No. 527,886, published June 22, 1948.
Slide fasteners and components therefor. Talon, Inc. 502,282, Sept. 21; Serial No. 527,880, published June 22, 1948.
Slide fasteners and components therefor. Talon, Inc. 502,280, Sept. 21; Serial No. 527,863, published June 15, 1948.
Toilet seats and children's training deflectors, Children's. Kiddie Seat Corporation. 440,701–2, Sept. 21; Serial Nos. 510,703–4, published June 15, 1948.
Traps, adjustable and universal traps, Standard and convertible. Wolverine Brass Works. 69,312, re-renewed June 2, 1948. O. G. Sept. 21.
Valves, Pressure regulating. Alco Valve Company. 502,298, Sept. 21; Serial No. 528,844, published June 29, 1948.

CLASS 14

Castings of ferrous metal. Belle City Malleable Iron Company. 383,485, Dec. 10, 1940. Republished Sept. 21.

CLASS 15

Fuel, Liquid. J. V. Christie. 502,241, Sept. 21; Serial No. 512,766, published May 25, 1948.
Greases, Launching. Fiske Brothers Refining Co. 502,310, Sept. 21; Serial No. 529,448, published June 22, 1948.
Kerosene, Deodorized. Pennsylvania Refining Company. 348,947, Aug. 17, 1937. Republished Sept. 21.
Oil, gasoline, lubricating oil, and greases, Motor-lubricating. Northland Oil Company. 223,223, renewed Jan. 18, 1947. O. G. Sept. 21.
Oils and greases, Motor-lubricating. Nourse Oil Company. 279,339, Jan. 13, 1931. Republished Sept. 21.
Oils, cutting compound, etc., Lubricating. Pure Oil Company. 502,269, Sept. 21; Serial No. 527,283, published June 22, 1948.
Oils, Lubricating. Atlantic Refining Company. 502,242, Sept. 21; Serial No. 512,816, published May 11, 1948.
Oils, Motor. Pennsylvania Refining Company. 241,471, May 1, 1928. Republished Sept. 21.
Oils, rust preventative and preservative oils, Lubricating. Pure Oil Company. 502,268, Sept. 21; Serial No. 527,280, published June 22, 1948.

CLASS 16

Enamel, Shellac. Wm. Zinsser & Co. Inc. 239,060, Feb. 21, 1928. Republished Sept. 21.
Enamel, Stovepipe paint, asphalt roof paint. Rutland Fire Clay Co. 166,201, Mar. 27, 1923. Republished Sept. 21.
Flatting agents. Interchemical Corporation. 440,719, Sept. 21; Serial No. 516,899, published May 25, 1948.
Polish, Furniture. C. M. Kimball Co. 203,402–3, Sept. 15, 1925. Republished Sept. 21.

CLASS 17

Cigarettes and chewing tobacco. P. Lorillard Company. 502,393, Sept. 21; Serial No. 536,925, published June 29, 1948.
Cigarettes and smoking tobacco. Peper, Christian Tobacco Company. 432,256, Aug. 26, 1947. Republished Sept. 21.
Cigars. The Fair. 502,387, Sept. 21; Serial No. 536,369, published June 29, 1948.
Cigars and smoking and chewing tobacco. John Hudson Moore, Inc. 502,239, Sept. 21; Serial No. 512,077, published June 29, 1948.
Cigars, little cigars, and cheroots. Medalist Co., Inc. 502,327, Sept. 21; Serial No. 530,665, published June 29, 1948.
Smoking tobacco. Penn Tobacco Company. 502,404, Sept. 21; Serial No. 539,751, published June 29, 1948.

CLASS 19

Brake drums. Christiana Machine Company. 343,555, Feb. 23, 1937. Republished Sept. 21.
Brake linings, Asbestos, asbestos brake blocks, asbestos clutch facings, etc. Asbestos Manufacturing Company. 227,361, May 3, 1927. Republished Sept. 21.
Casters, Truck. Bond Foundry and Machine Company. 196,094, Mar. 10, 1925. Republished Sept. 21.
Casters, Truck. Bond Foundry and Machine Company. 314,283, June 26, 1934. Republished Sept. 21.
Seat covers for motor vehicles. Western Auto Supply Company. 419,361, Feb. 12, 1946. Republished Sept. 21.
Trucks and passenger automobiles, automobile wheels, radiators, etc. Adolph Saurer, Inc. 210,390, Mar. 16, 1926. Republished Sept. 21.
Trucks, Hand. Bond Foundry and Machine Company. 421,830, June 18, 1946. Republished Sept. 21.

CLASS 21

Batteries and primary batteries or dry cells and parts thereof, etc., Secondary or storage. Willard Storage Battery Company. 502,333, Sept. 21; Serial No. 530,881, published June 22, 1948.
Camera and portable radio receiving set, Combined. Minerva Corporation of America. 440,703, Sept. 21; Serial No. 510,968, published June 15, 1948.
Connectors, Electrical. Reliable Electric Company. 502,276, Sept. 21; Serial No. 527,557, published May 18, 1948.
Controllers, Electric. Electric Controller & Manufacturing Company. 502,324, Sept. 21; Serial No. 530,483, published June 8, 1948.
Electrical and electronic apparatus. Globe-Union Inc. 502,313, Sept. 21; Serial No. 529,635, published June 15, 1948.
Electrical apparatus, machines, and supplies. Ohio Brass Company. 502,297, Sept. 21; Serial No. 528,813, published June 8, 1948.
Electrical starting, lighting, and ignition. Delco-Remy Corporation. 246,572, renewed Sept. 11, 1948. O. G. Sept. 21.
Electrical wire, cable and conductors, both insulated and uninsulated. Crescent Insulated Wire and Cable Co., Inc. 344,512, Mar. 30, 1937. Republished Sept. 21.
Floor lamps, chair-lamps, torchères, Electrically-lighted, etc. Art Lamp Mfg. Co. 132,881, July 6, 1920. Republished Sept. 21.
Interphone communication apparatus for aircraft. Myers-Williams, Inc. 502,360, Sept. 21; Serial No. 532,857, published June 8, 1948.
Irons, Electric. Hoover Company. 502,428, Sept. 21; Serial No. 527,228.
Lamps, electric horns, electric stop signals, etc., Electric. E. A. Laboratories, Inc. 502,348, Sept. 21; Serial No. 531,686, published June 1, 1948.
Lamp holders, Electric. Stone Manufacturing Co. 502,362, Sept. 21; Serial No. 532,881, published June 8.
Loud speakers. Jensen Radio Manufacturing Company. 394,905–6, May 5, 1942. Republished Sept. 21.
Loud speakers, Radio. Jensen Radio Manufacturing Company. 288,872, Nov. 10, 1931. Republished Sept. 21.
Motors, Electric. Robbins & Myers, Inc. 502,228, Sept. 21; Serial No. 495,909, published June 1, 1948.
Phonographs, Electrical. Waters Conley Company. 502,358, Sept. 21; Serial No. 532,776, published June 15, 1948.
Radio receiving sets and radio phonograph combinations. Allied Stores Corporation. 430,272, June 10, 1947. Republished Sept. 21.
Radio receiving sets and radio phonographs. Howard Radio Co. 502,260, Sept. 21; Serial No. 526,508, published June 22, 1948.
Radio receiving sets, electric phonographs and combinations thereof. Universal Camera Corporation. 440,685, Sept. 21; Serial No. 498,955, published May 13, 1947.
Sheaths for electric cables, Metal. Okonite-Callender Cable Company, Incorporated. 502,322, Sept. 21; Serial No. 530,115, published June 22, 1948.
Sound recording wire, Electrical. National-Standard Company. 502,250, Sept. 21; Serial No. 518,312, published June 15, 1948.
Talking machines and parts thereof, Electrical. Zenith Radio Corporation. 440,742, Sept. 21; Serial No. 525,740, published June 8, 1948.
Tone arms, Pick-up. Webster Electric Company. 502,339, Sept. 21; Serial No. 531,168, published June 8, 1948.

CLASS 22

Fish lures. James Heddon's Sons. 502,377–8, Sept. 21; Serial Nos. 534,130–1, published May 11, 1948.
Fishing lures and plugs, Artificial. R. B. Pond. 440,721, Sept. 21; Serial No. 517,866, published Nov. 18, 1947.
Golf clubs and golf balls. Western Auto Supply Company. 377,971, May 21, 1940. Repbulished Sept. 21.
Tennis rackets. C. L. Godfrey. 440,752, Sept. 21; Serial No. 512,665.

CLASS 23

Apparatus for mechanically cooling roasted coffee and other materials. Jabez Burns & Sons, Inc. 275,169, Sept. 16, 1930. Republished Sept. 21.
Apparatus for the treatment of solids suspended in liquids. Dorr Company, Inc. 328,835, Oct. 8, 1935. Republished Sept. 21.
Apparatus for the treatment of solids suspended in liquids. Dorr Company, Inc. 343,664, Mar. 2, 1937. Republished Sept. 21.
Carving sets and knives. Cattaraugus Cutlery Company. 385,884, Mar. 18, 1941. Republished Sept. 21.

Cast rolls of ferrous metal, Finished. Mackintosh-Hemphill Company. 440,689, Sept. 21; Serial No. 501,257, published June 1, 1948.
Crushers, shredders, breakers, etc. Gruendler Patent Crushers and Pulverizer Company. 240,680, Apr. 3, 1928. Republished Sept. 21.
Cutlery. Cattaraugus Cutlery Co. 111,660, July 25, 1916. Republished Sept. 21.
Cutlery of base metal, Household. Cattaraugus Cutlery Company. 367,396, May 16, 1939. Republished Sept. 21.
Drills and socket wrenches, Twist. L. T. Derr. 440,688, Sept. 21; Serial No. 501,170, published June 22, 1948.
Files and rasps. Nicholson File Company. 249,815, renewed Nov. 20, 1948. O. G. Sept. 21.
Filtermass washers, filter sterilizing apparatus, filtermass breakers, etc. Enzinger Union Corporation. 502,289, Sept. 21; Serial No. 528,267, published June 22, 1948.
Fire extinguishers and combination hand fire extinguisher and tire inflator, Hand. Taylor Engineering Company, Inc. 502,294, Sept. 21; Serial No. 528,655, published June 1, 1948.
Fire-extinguishing devices and supplies. New England Fire Appliance Co. 225,331, renewed Mar. 15, 1947. O. G. Sept. 21.
Gasoline pumping apparatus, Non-measuring. V. M. Harman. 440,750, Sept. 21; Serial No. 491,092.
Gears, Automobile transmission. Mack Manufacturing Corporation. 440,679, Sept. 21; Serial No. 488,912, published May 25, 1948.
Hoists, hydraulic wagon jacks, hydraulic sweep rakes and stackers, etc. Hydraulic wagon and trailer. P. S. McFord. 440,725, Sept. 21; Serial No. 519,477; published June 22, 1948.
Jigs and fixtures, Component parts of. Noble & Stanton, Inc. 440,697, Sept. 21; Serial No. 509,236, published July 6, 1948.
Kitchenware and tableware. T. S. Higginbotham, III. 440,683, Sept. 21; Serial No. 493,773, published June 15, 1948.
Kits, Repair. Anchor Rubber Products, Inc. 440,680, Sept. 21; Serial No. 489,896, published June 1, 1948.
Knife. Cattaraugus Cutlery Company. 327,764, Sept. 3, 1935. Republished Sept. 21.
Knife, Pocket. Cattaraugus Cutlery Company. 296,295, Aug. 2, 1932. Republished Sept. 21.
Knife, Sheath. Cattaraugus Cutlery Co. 209,517, Feb. 23, 1926. Republished Sept. 21.
Knives, Butcher, skinning, sticking, boning and steak. Cattaraugus Cutlery Company. 17,700, Mar. 25, 1890. Republished Sept. 21.
Loom pickers, check straps. Charles Bond Company. 198,619, May 19, 1925. Republished Sept. 21.
Loom sundries, etc., Leathered. Charles Bond Company. 199,796, June 16, 1925. Republished Sept. 21.
Lubricant tank and nonmeasuring pump, Combined. Bennett Pumps Corporation. 250,675, renewed Dec. 11, 1948. O. G. Sept. 21.
Lubricators. Lunkenheimer Company. 440,743–4; Sept. 21; Serial Nos. 525,892–3, published June 1, 1948.
Machine for spraying paints, colours and varnish. Connor Patents Limited. 440,704, Sept. 21; Serial No. 511,056, published June 1, 1948.
Machine, Power operated. E. L. Coddington. 430,314, June 10, 1947. Republished Sept. 21.
Machine, Power operated. Western Machine Tool Works. 440,730–31, Sept. 21; Serial Nos. 520,843–4, published June 22, 1948.
Machine tools. Consolidated Machine Tool Corporation. 502,272, Sept. 21; Serial No. 527,450, published June 1, 1948.
Machinery for the use of bakers and confectioners. Union Confectionery Machinery Co., Inc. 228,679–80, June 7, 1927. Republished Sept. 21.
Machines for grinding, cracking, or otherwise treating coffee and other materials. Jabez Burns & Sons, Inc. 399,839, Feb. 2, 1943. Republished Sept. 21.
Metal-working machinery. Consolidated Machine Tool Corporation. 502,273, Sept. 21; Serial No. 527,451, published June 1, 1948.
Milking-machine. Pine Tree Milking Machine Company. 122,816, Sept. 17, 1918. Republished Sept. 21.
Mill machinery and roasters for coffee, Coffee and spice. Jabez Burns & Sons. 73,447, Apr. 20, 1909. Republished Sept. 21.
Packaging machinery. J. L. Ferguson Company. 275,550, Sept. 23, 1930. Republished Sept. 21.
Pea shellers, kitchen shears, jar openers, etc. G. N. Coughlan Co. 362,669, Nov. 29, 1938. Republished Sept. 21.
Penknives, jackknives, kitchen-knives, etc. Cattaraugus Cutlery Co. 139,499, Feb. 8, 1921. Republished Sept. 21.
Piston pins, power transmission clutches and parts thereof. Burgess-Norton Mfg. Co. 266,674, Jan. 28, 1930. Republished Sept. 21.
Plows, plow shares, and plow parts. Minneapolis-Moline Power Implement Company. 502,291, Sept. 21; Serial No. 528,355, published June 1, 1948.
Pocket-knives and hunting knives. Cattaraugus Cutlery Company. 277,075, Nov. 4, 1930. Republished Sept. 21.
Pocket-knives, table knives and forks, etc. Cattaraugus Cutlery Company. 63,389, June 18, 1907. Republished Sept. 21.

Pocket-knives, table knives and forks, shears, etc. Cattaraugus Cutlery Co. 72,060, re-renewed Dec. 29, 1948. O. G. Sept. 21.
Power shovels and mucking machines, Electric. Goodman Manufacturing Company. 502,270, Sept. 21; Serial No. 527,347, published June 22, 1948.
Printing devices for use in addressing and similar machines. Addressograph-Multigraph Corporation. 399,318, Dec. 29, 1942. Republished Sept. 21.
Printing presses, form holders, type locking devices, etc. American Multigraph Sales Company. 92,385, July 8, 1913. Republished Sept. 21.
Pulp presses, Motor driven, screw-type, extrusion. Jackson & Church Company. 502,296, Sept. 21; Serial No. 528,798, published June 22, 1948.
Pumps. Ruthman Machinery Company. 440,740, Sept. 21; Serial No. 525,272, published June 22, 1948.
Razors. Cattaraugus Cutlery Co. 95,599, Mar. 3, 1914. Republished Sept. 21.
Razors. Curvfit Razor Company, Inc. 205,305, Nov. 3, 1925. Corrected. O. G. Sept. 21.
Rocking devices for automobiles. Moto-Sway Corporation of America. 321,389, Jan. 29, 1935. Republished Sept. 21.
Roller bearings, Ball and tapered. Leterstone Sales Company. 502,305, Sept. 21; Serial No. 529,179, published June 22, 1948.
Screw drivers, socket and other open ended wrenches and pliers. Park Metalware Company, Inc. 502,227, Sept. 21; Serial No. 495,816, published June 1, 1948.
Shaft couplings. Charles Bond Company. 261,043, Sept. 3, 1929. Republished Sept. 21.
Shaft couplings. Charles Bond Company. 261,105, Sept. 3, 1929. Republished Sept. 21.
Shaft couplings. Bond Foundry and Machine Company. 79,400, Sept. 6, 1910. Republished Sept. 21.
Shavers, Electric. Eastern Shaver Service Co. 440,713, Sept. 21; Serial No. 515,488, published June 22, 1948.
Sprayers, Hand. Standard Oil Company of California. 440,691, Sept. 21; Serial No. 505,989, published June 22, 1948.
Spraying machines, Compressed-air. De Vilbiss Manufacturing Co. 166,404, Apr. 3, 1923. Republished Sept. 21.
Support and aligner, Combined. Reynolds & Reynolds Company. 440,705, Sept. 21; Serial No. 511,833, published June 22, 1948.
Taps and dies. Winters Brothers Company. 431,234, July 15, 1947. Republished Sept. 21.
Tool kits. Park Metalware Company, Inc. 502,229, Sept. 21; Serial No. 496,460, published June 22, 1948.
Tractors. Heinz and Munschauer. 502,409, Sept. 21; Serial No. 545,323, published June 22, 1948.
Wheels for supporting endless abrasive bands or belts. Columbian Rope Company. 440,711, Sept. 21; Serial No. 514,690, published June 8, 1948.
Winches and accessories. A. W. Evans. 440,706, Sept. 21; Serial No. 512,830, published June 8, 1948.

CLASS 24

Dry cleaning equipment. Wool-O-Matic Manufacturing Co. 440,699, Sept. 21; Serial No. 509,902, published June 29, 1948.
Laundry equipment. General Motors Corporation. 502,399, Sept. 21; Serial No. 537,999, published June 29, 1948.
Washers and ironers, Power driven mechanical. Western Auto Supply Company. 425,528, Nov. 26, 1946. Republished Sept. 21.
Washers, Electric laundry. Chicago Electric Manufacturing Company. 502,309, Sept. 21; Serial No. 529,366, published June 29, 1948.
Washers, Electric laundry. Chicago Electric Manufacturing Company. 502,312, Sept. 21; Serial No. 529,600, published June 29, 1948.

Strassner, John F., New York, N. Y. Dress. 151,090, Sept. 21.

Strassner, John F., New York, N. Y. Dress. 151,091, Sept. 21.

Strassner, John F., New York, N. Y. Dress. 151,092, Sept. 21.

Strassner, John F., New York, N. Y. Dress. 151,093, Sept. 21.

Strassner, John F., New York, N. Y. Dress. 151,094, Sept. 21.

Strassner, John F., New York, N. Y. Dress. 151,095, Sept. 21.

Strassner, John F., New York, N. Y. Dress. 151,096, Sept. 21.

Strassner, John F., New York, N. Y. Dress ensemble. 151,097, Sept. 21.

Strassner, John F., New York, N. Y. Dress. 151,098, Sept. 21.

Strauss, Kate R., assignor to Famous Bathrobe Co., Inc., New York, N. Y. Bootee. 151,099, Sept. 21.

Sunberg, Carl W., Birmingham, assignor to Pratt Manufacturing Company, Coldwater, Mich. Sled knee. 151,100, Sept. 21.

Sunset, Incorporated, assignee: *See*—
Blitzstein, William.

Taber, Clifford W., Pasadena, Calif. Welding electrode holder. 151,101, Sept. 21.

Talge, Henry J., Kansas City, Mo., and A. M. Travis, Kansas City, Kans. Ice crusher. 151,102, Sept. 21.

Talge, Henry J., and E. F. Whitfill, assignors to J. C. Hockery, Kansas City, Mo., as trustee. Fruit juicer. 151,103, Sept. 21.

Tomshinsky, Victor, New York, N. Y. Dress. 151,104, Sept. 21.

Travis, Albert M.: *See*—
Talge, Henry J., and Travis.

Trifari, Krussman, & Fishel, Inc., assignee: *See*—
Philippe, Alfred.

Uihlein, Erwin C., Grafton, assignor to Jos. Schlitz Brewing Company, Milwaukee, Wis. Display sign. 151,105, Sept. 21.

Valiant Appliances, Inc., assignee: *See*—
Yaeger, Paul.

Vaughn, Ray A., Sheboygan, Mich. Fish lure. 151,106, Sept. 21.

Vaughn, Ray A., Sheboygan, Mich. Fish lure. 151,107, Sept. 21.

Verduyn, John W., and L. M. Mason, Long Beach, Calif.; said Mason assignor to said Verhuyn. Cracker tray. 151,108, Sept. 21.

Wagner, Franz, Chicago, Ill., assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio. Military brush. 151,109, Sept. 21.

Walker, William H., Glendale, assignor to American Brazed Products, Los Angeles, Calif. Bicycle frame. 151,110, Sept. 21.

Webster Rubber Company, assignee: *See*—
Hubbard, Flavius B.

Westlake, Edwin, assignor to A. B. A. Specialties, Incorporated, New York, N. Y. Table, desk, or similar article. 151,111, Sept. 21.

Whitfill, Elton F.: *See*—
Talge, Henry J., and Whitfill.

Willson Products, Inc., assignee: *See*—
Lindgren, Orton W., Jr.

Wise, Lambert A., Pittsburgh, Pa. Vehicle toy. 151,112, Sept. 21.

Yaeger, Paul, assignor to Valiant Appliances, Inc., New York, N. Y. Toaster. 151,113, Sept. 21.

Younger, Dwen R., San Francisco, Calif. Airplane hangar. 151,114, Sept. 21.

Zipser, Richard E., New York, N. Y. Child's combined food warmer and service plate. 151,115, Sept. 21.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21ST DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ackerman, Harold S., Dayton, Ohio, assignor to Hubbard and Company, Pittsburgh, Pa. Control apparatus. 2,449,538, Sept. 21.

Acme Visible Records, Inc., assignee: *See*—
Attwood, Charles E.

Admiraa, Daniel J. H., Eindhoven, Netherlands, assignor to General Electric Company. Glow discharge switch. 2,449,632, Sept. 21.

Agren, Carl G., Roberts, Idaho. Portable loading ramp. 2,449,829, Sept. 21.

Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Mast, William C., Rehberg, and Fisher.
Nichols, Peter L., Jr., and Hamilton.
Watson, Paul D.

Albert, Ell: *See*—
Albert, Nathan, J. and E.

Albert, Jack: *See*—
Albert, Nathan, J. and E.

Albert, Nathan, J., and E., New York, N. Y. Headwear. 2,449,633, Sept. 21.

Albert, Robert M., Chicago, Ill. Rod clip. 2,449,830, Sept. 21.

Albin, Joseph, New York, N. Y. Aircraft flare. 2,449,540, Sept. 21.

Allied Chemical & Dye Corporation, assignee: *See*—
Cosby, John N.
Mueller, Max B.

Alltools, Limited, assignee: *See*—
Graves, Arnold, and Dawes.

Alvarez, Octavio J., and E. Osman, assignors of one-half to Alvarez Patent Corporation, and one-half to E. Osman, New York, N. Y. Switch arrangement. 2,449,799, Sept. 21.

Alvarez Patent Corporation, assignee: *See*—
Alvarez, Octavio J., and Osman.

Akerman, John D., and M. Schonberg, Minneapolis, Minn. Differential pressure valve. 2,449,683, Sept. 21.

American Steel Foundries, assignee: *See*—
Baslet, Walter H.

Anaconda Wire and Cable Company, assignee: *See*—
Bechle, Charles W., and Olson.

Andersen, Soren K., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif. Cooler for viscous liquids. 2,449,922, Sept. 21.

Anderson, Earl I., Manhasset, N. Y., assignor to Radio Corporation of America. Timing modulation system. 2,449,923, Sept. 21.

Arms, Merton H. and L. J. Barnard, assignors to Bryant Chucking Grinder Company, Springfield, Vt. Chuck. 2,449,831, Sept. 21.

Arno, Anthony P., U. S. Navy. Discharge nozzle. 2,449,541, Sept. 21.

Aske, Leonard E., Minneapolis, Minn., assignor to General Mills, Inc. Rotor for axial pole induction motors. 2,449,924, Sept. 21.

Aske, Leonard E., Minneapolis, Minn., assignor to General Mills, Inc. Disk type rotor for axial pole induction motors. 2,449,925, Sept. 21.

Atlantic Refining Company, The, assignee: *See*—
Lawhorne, William M.

Atwood, Charles E., assignor to Acme Visible Records, Inc., Chicago, Ill. Visible index signal means. 2,449,576, Sept. 21.

Austen, Walter E., Melbourne, Victoria, Australia. Clinometer. 2,449,870, Sept. 21.

Ayers, Edgar H., Schenectady, N. Y., assignor to General Electric Company. Refrigeration control apparatus. 2,449,800, Sept. 21.

Ayres, Waldemar A., Kew Gardens Hills, and E. C. Streeter, Jr., Old Westbury, N. Y., assignor to The Sperry Corporation. Radio object locating device for producing stereoscopic images. 2,449,542, Sept. 21.

Baade, Henry, assignor to Visioneering Company, Inc., Cleveland, Ohio. Automatic washing machine. 2,449,634, Sept. 21.

Bacon, Reginald G. R., H. Taylor, and L. Wood, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Aqueous polyvinyl chloride/polystyrene dispersions. 2,449,684, Sept. 21.

Bailey, Christopher E. G., Bournemouth, England, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electrical condenser. 2,449,577, Sept. 21.

Baker, Arnold, New Haven, Conn. Link belt unloader. 2,449,543, Sept. 21.

Baldwin Locomotive Works, The, assignee: *See*—
De Forest, Alfred V.

Ballard, Dana R., Madera, Calif. Spare tire carrier attachment for trucks. 2,449,544, Sept. 21.

Balleisen, Charles E., Philadelphia, Pa. Breech block return means for the Browning machine gun. 2,449,545, Sept. 21.

Bancroft, Howard S., Sharon, Pa. Pump. 2,449,832, Sept. 21.

Banker, Oscar H., assignor to New Products Corporation, Chicago, Ill. Automatic change-speed transmission. 2,449,964, Sept. 21.

Barber-Colman Company, assignee: *See*—
Peterson, Burt A.

Barnard, Leon J.: *See*—
Arms, Merton H., and Barnard.

Barnes, James A., Keokuk, Iowa. Sleeve cuff holding device. 2,449,579, Sept. 21.

Barnes, Julius L., Allston, Mass. Valve. 2,449,833, Sept. 21.

Barr, Frank T., Summit, N. J., assignor, by mesne assignments, to Standard Catalytic Company. Production of hydrogen. 2,449,635, Sept. 21.

Barr, Louis L., Pittsburgh, Pa. Stirrer for cooking vessels. 2,449,578, Sept. 21.

Barshdorf, Harry O., Adams, assignor to Sprague Electric Company, North Adams, Mass. Electrical seal. 2,449,759, Sept. 21.

Baselt, Walter H., assignor to American Steel Foundries, Chicago, Ill. Brake cylinder mounting. 2,449,636, Sept. 21.

Bay Chemical Company, Inc., assignee: *See*—
Lippman, Alfred, Jr., Comstock, and Benjamin.

Bechle, Charles W., and J. W. Olson, Sycamore, Ill., assignors to Anaconda Wire and Cable Company. Wire covering machine, method, and product. 2,449,834, Sept. 21.

Bedford, Clay P., Berkeley, assignor to The Kaiser Company, Oakland, Calif. Apparatus for relieving stress in welded plates. 2,449,760, Sept. 21.

Beerbower, Alan, Westfield, and J. C. Zimmer, Union, N. J., assignors to Standard Oil Development Company. Lubricating grease composition. 2,449,580, Sept. 21.

Bell, Alfred B., Philadelphia, Pa., assignor to Heywood-Wakefield Company, Gardner, Mass. Ash receptacle for armrests of vehicle seats. 2,449,965, Sept. 21.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Hefele, John R.

Belmont Radio Corporation, assignee: *See*—
Marholz, Richard C.

Bemis, Robert E., Houston, Tex. Window sash mounting and operating mechanism. 2,449,761, Sept. 21.

Bendix Aviation Corporation, assignee: *See*—
Frei, Jakob R.

Benjamin, Edward B.: *See*—
Lippman, Alfred, Jr., Comstock, and Benjamin.

Best, Clarence S., assignor to National Sewing Machine Company, Belvidere, Ill. Sewing machine bobbin winder. 2,449,835, Sept. 21.

Best, David M.: *See*—
Claypool, Robbins M., and Best.

Bethlehem Steel Company, assignee: *See*—
Jameson, William H., and Durkee.

Bias, Frank J., Scotia, and H. W. Lord, Schenectady, N. Y., assignors to General Electric Company. Oscillograph apparatus. 2,449,801, Sept. 21.

Biehl, John H., Westmont, N. J. Chance spinner device. 2,449,762, Sept. 21.

Birdsell, Harry R., Cleveland, Ohio. Necktie securing device. 2,449,539, Sept. 21.

Blackman, Frank G., Bluefield, W. Va. Musclage container. 2,449,763, Sept. 21.

Blake, Harold D., and W. J. Winninghoff, Cleveland Heights, Ohio, assignors to General Electric Company. Method and apparatus for manufacturing fluorescent lamps. 2,449,637, Sept. 21.

Blake, Ralph K., Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic silver halide emulsions. 2,449,836, Sept. 21.

Bliss, E. W., Company, assignee: *See*—
Cannon, Earl.

Bludworth, Joseph E., M. O. Robeson, and H. A. Truby, Jr., Corpus Christi, Tex., assignors to Celanese Corporation of America. Quantitative determination of unsaturated aldehydes. 2,449,581, Sept. 21.

Bluemink, Gary G., assignor to The Dumore Company, Racine, Wis. Brush holder. 2,449,764, Sept. 21.

Bogen, Samuel, New York, N. Y. Electrical connection of separable character. 2,449,736, Sept. 21.

Bohler, Francis M., Hawthorne, Calif. Foot propelled skate. 2,449,871, Sept. 21.

Boone, Daniel M., Lumberton, and S. C. Boone, Charlotte, N. C. Tobacco stick. 2,449,837, Sept. 21.

Boone, Stephen C.: *See*—
Boone, Daniel M. and S. C.

Borg-Warner Corporation, assignee: *See*—
Carnagua, Harold E.
Le May, Braudice B., Jr.

Bouman, Johannes A. J., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Radio receiver or amplifier arranged to be fed from direct current mains. 2,449,685, Sept. 21.

Bower Roller Bearing Company, assignee: *See*—
Johnson, Glen F.

Brasch, Arno, and W. Huber, Brooklyn, N. Y., assignor, by mesne assignments, to Electronized Chemicals Corporation. Electron discharge vessel. 2,449,872, Sept. 21.

Brattain, Paul L., Azusa, Calif. Multiple circuit stand lamp. 2,449,765, Sept. 21.

Brett, George N., and E. A. Smith, Gravesend, assignors to W. T. Hanley's Telegraph Works Company Limited, London, England. Valve suitable for use with cathode-ray tubes and for other purposes. 2,449,838, Sept. 21.

Bridge, Edward W., Philadelphia, Pa. Slicing, cutting, and core-removing machine. 2,449,737, Sept. 21.

Brinda, Steven S., Minneapolis, Minn. Door stop. 2,449,686, Sept. 21.

Brinda, Steven S., Minneapolis, Minn. Door stop. 2,449,687, Sept. 21.

Brinkoeter, Clinton C., assignor to Ed Friedrich, Inc., San Antonio, Tex. Dehydrator for refrigerating systems. 2,449,688, Sept. 21.

Brinson, R. L., Company, assignee: *See*—
Fulton, Joel B.

British Cotton Industry Research Association, The, assignee: *See*—
Foster, George A. R., and Gregory.

Brittle, David F., Weaverville, N. C. Balsa punch. 2,449,839, Sept. 21.

Brockman, George, New York, N. Y. Sun suit type of apparel. 2,449,873, Sept. 21.

Brown, Clyde A., assignor to Dole Valve Company, Chicago, Ill. Means for producing uniform fluid mixtures. 2,449,766, Sept. 21.

Brown Fintube Company, assignee: *See*—
Brown, John W., Jr.

Brown, John W., Jr., Lakewood, assignor to Brown Fintube Company Elyria, Ohio. Apparatus for manufacturing finned tubes. 2,449,840, Sept. 21.

Bruce, John N.: *See*—
Moulsdale, Andrew G., and Bruce.

Bruce, William F., Havertown, and J. Seifter, Willow Grove, assignors to Wyeth Incorporated, Philadelphia, Pa. Substituted glycinamides. 2,449,638, Sept. 21.

Bruning, James M., Mount Vernon, Wash. Machine for the automatic cooling and heating of baby bottles and food. 2,449,874, Sept. 21.

Brusset, Jean A., Blairmore, Alberta, Canada. Pulsating pneumatic stratifier. 2,449,582, Sept. 21.

Bryant Chucking Grinder Company, assignee: *See*—
Arms, Merton H., and Barnard.
Cornell, Elton S.

Buckendale, Lawrence R., Detroit, Mich., and B. W. Keese, Oshkosh, Wis., assignors to The Timken-Detroit Axle Company, Detroit, Mich. Power transmitting mechanism. 2,449,546, Sept. 21.

Bucy, Roy T.: *See*—
Lotts, Delbert L., Bucy, and Waldron.

Buffalo Ankerite Gold Mines, Ltd., assignee: *See*—
Kinkel, Revere P.

Burns, Fred J., Saginaw, Mich., assignor to The Columbia Mills, Inc., New York, N. Y. Cord lock and bracket. 2,449,583, Sept. 21.

Burns, Henry L., Yellow Springs, Ohio. Automatic control system for high altitude pressure suits. 2,449,548, Sept. 21.

Burton, Samuel, Los Angeles, Calif. Shirt collar construction. 2,449,584, Sept. 21.

Bury, Paul A.: *See*—
Calvert, Francis E., and Bury.

Butler, Henry J., Beechcroft, Sutton Coldfield, assignor to Dunlop Rubber Company Limited, London County, England. Fluid pressure operated brake and the like. 2,449,802, Sept. 21.

Byrene, Maurice E., United States Army, Lewiston, Idaho. Sweep circuit for cathode-ray tubes. 2,449,549, Sept. 21.

Byrkit, Gordon D., Niagara Falls, N. Y., assignor, by mesne assignments, to The Lubrizol Development Corporation, Cleveland, Ohio. Lubricating oil addition agent. 2,449,547, Sept. 21.

Cadwallader, Robert, Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Mounting structure for windows. 2,449,875, Sept. 21.

Cahn, Frank J., assignor to The Emulsol Corporation, Chicago, Ill. Esters of alcohol nontertiary amines. 2,449,926, Sept. 21.

Cal-Pan Corporation, assignee: *See*—
Trautmann, Herbert L.

Calvert, Francis E., and P. A. Bury, assignors to The Drackett Company, Cincinnati, Ohio. Plastic compositions and process of making the same. 2,449,876, Sept. 21.

Camp, Elza Q., Goose Creek, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Suppression of corrosion in ferrous alloy vessels in the treatment of hydrocarbons. 2,449,585, Sept. 21.

Cannon, Earl, Rockville Centre, assignor to E. W. Bliss Company, Brooklyn, N. Y. Hydraulic press system with control means yielding high-speed operation thereof. 2,449,639, Sept. 21.

Carnagua, Harold E., Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Transmission and control therefor. 2,449,586, Sept. 21.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Forsythe, John W.

Carnell, Paul H., Bartlesville, Okla., assignor to Phillips Petroleum Company. Lubricant. 2,449,689, Sept. 21.

Carpenter, Arthur J.: *See*—
Wak, Peter T., Jr., and Carpenter.

Carpenter, Charles C., Grand Forks, N. Dak. Stretcher with skeletal traction facilities. 2,449,767, Sept. 21.

Carpenter Steel Company, The, assignee: *See*—
Fetzer, Maurice C., and Kemper.

Carswell, Thomas S., Longmeadow, and R. F. Hayes, Springfield, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo. Preparation of hydroxyethyl-2,5-dichlorobenzene. 2,449,877, Sept. 21.

Celanese Corporation of America, assignee: *See*—
Bludworth, Joseph E., Robeson, and Truby.

Chain Belt Company, assignee: *See*—
Miller, Arthur E., Viall, and Lindow.

Chambers, John M., Boston, assignor to Arthur D. Little, Inc., Cambridge, Mass. Vertical heating and circulating tube still. 2,449,587, Sept. 21.

Chapman, Fred H., Pepperell, Mass., assignor to The International Paper Box Machine Company, Nashua, N. H. Mechanism for feeding sheets of stiff fibrous material. 2,449,690, Sept. 21.

Charney, Jesse, New York, N. Y., assignor to Wyeth Incorporated, Philadelphia, Pa. Solutions of riboflavin. 2,449,640, Sept. 21.

Checkon, John, Gary, Ind. Atomizer. 2,449,927, Sept. 21.

Cheeseman, Charles H.: *See*—
Putnam, David F., and Cheeseman.

Chrysler Corporation, assignee: *See*—
Cadwallader, Robert.
Edwards, Franklin W.
Lotts, Delbert L., Bucy, and Waldron.
Tansley, John A.

Cidissen, John, Los Angeles, Calif. Abdominal support. 2,449,641, Sept. 21.

Clafford, Floyd R., Park Ridge, Ill. Adjustable pipe union. 2,449,588, Sept. 21.

Clarke, George, Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for operating on shoes. 2,449,589, Sept. 21.

Clausing, George, and C. B. Gary, assignors to Vulcan Corporation, Portsmouth, Ohio. Copying lathe. 2,449,878, Sept. 21.

Claypool, Robbins M., Bellaire, and D. M. Best, Houston, Tex. Apparatus for washing over, releasing, and withdrawing tubular structures from wells. 2,449,841, Sept. 21.

Collison, William J., San Diego, Calif. Cutin fitting. 2,449,803, Sept. 21.

Colpaert, Loger C., Detroit, Mich. Boat speedometer. 2,449,590, Sept. 21.

Columbia Mills, Inc., The, assignee: *See*—
Burns, Fred J.

Commanday-Roth Co., Inc., assignee: *See*—
Roth, Louis H.

Comstock, Rock L.: *See*—
Lippman, Alfred, Jr., Comstock, and Benjamin.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Druliner, Joseph M.

Cook, Richard R., assignee: *See*—
Wilson, Ray.

Coons, William H., Lomita, Calif. Well washer and tester. 2,449,642, Sept. 21.

Corkery, Frank W., Crafton, assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa. Synthetic rubber reclaimed with a reclaiming oil composed of solvent naphtha and an aromatic hydrocarbon oil. 2,449,879, Sept. 21.

Corkery, Frank W., Crafton, assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa. Synthetic rubber plasticized with a composition composed essentially of an aromatic hydrocarbon oil. 2,449,928, Sept. 21.

Corkery, Frank W., Crafton, assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa. Elastomer plasticizing composition composed of coumarone resin and an aromatic hydrocarbon oil. 2,449,929, Sept. 21.

Cornell, Elton S., Charlestown, N. H., assignor to Bryant Chucking Grinder Company, Springfield, Vt. Work gauge. 2,449,842, Sept. 21.

Cornell, Robert C., Jackson, assignor to The Dow Chemical Company, Midland, Mich. Heat-treating magnesium-alloy die castings. 2,449,768, Sept. 21.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Corte, Joseph P. D.: *See*—
Penfold, Hilliard F., and Corte.

Cosby, John N., Morristown, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Benzonitrile production from benzene or diphenyl and HCN. 2,449,643, Sept. 21.

Couse, Kibbey W., Newark, N. J. Protective packing means. 2,449,591, Sept. 21.

Cox, Arthur, assignor to Taylor, Taylor & Hobson Limited, Leicester, England. Modified optical objective having a simple divergent component air spaced between two compound convergent components. 2,449,769, Sept. 21.

Cox, James L., Ramsey, assignor to Duro-Test Corporation, North Bergen, N. J. Light source. 2,449,880, Sept. 21.

Crandall, Bee C., Memphis, Tenn. Venturi ring machine. 2,449,881, Sept. 21.

Cread Engineering and Research Company, assignee: *See*—
Gilman, Wilbert M.

Curtis, Helene, Industries, Inc., assignee: *See*—
Nemeth, Otto R.

Cutten, Arthur F., assignee: *See*—
Slatkin, Alfred D.

Daddario, Joseph D., Franklin, Mass. Distributor for airborne fibers. 2,449,592, Sept. 21.

Dake, George E., Parkersburg, W. Va., and J. A. Lyne, Houston, Tex., assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va. Oil emulsion treater. 2,449,738, Sept. 21.

D'Alello, Gaetano F., Northampton, and J. W. Underwood, Pittsfield, Mass., assignors to General Electric Company. Nitroalcohol esters of acrylic acid and interpolymers produced from the same. 2,449,804, Sept. 21.

Danforth, Joseph D., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Production of N,N dibutyl phenethylamine. 2,449,644, Sept. 21.

Daniels, Amy J., North Wilbraham, Mass. Holder for intravenous apparatus. 2,449,882, Sept. 21.

Davenport, Belle F.: *See*—
Neuhoff, Ermaline G., and Davenport.

Davey, Paul H., Kent, Ohio. Compressor. 2,449,930, Sept. 21.

Davis, John L.: *See*—
Sellers, Jesse E., and Davis.

Dawes, Travis J.: *See*—
Graves, Arnold, and Dawes.

Deal, Mildred T., Cleveland, Ohio. Reweaving machine. 2,449,691, Sept. 21.

De Forest, Alfred V., Marlboro, N. H., assignor to The Baldwin Locomotive Works. Fatigue indicator. 2,449,883, Sept. 21.

Demattels, Julian, Batavia, Iowa. Turbine. 2,449,931, Sept. 21.

Dempsey, Harold L., Columbus, Ohio, assignor to Ditto, Incorporated, Chicago, Ill. Running direct process gummed units. 2,449,770, Sept. 21.

Develay, Cesar, and G. M. Galvier, Paris, France. Automatic cupping device. 2,449,805, Sept. 21.

Di Monico, George S.: *See*—
Leathers, Ward, and Di Monico.

Disney, Walt, Productions, assignee: *See*—
Iwerks, Ubbe E.
Jones, Richard.

Distillers Company, Limited, The, assignee: *See*—
Staudinger, Hanns P., Faulkner, and Wright.

Ditto, Incorporated, assignee: *See*—
Dempsey, Harold L.
Hess, Arthur L.

Diversified Designing & Machine Products Corporation, assignee: *See*—
Williams, Eugene D.

Dolan, Charles H., II, Old Greenwich, Conn. Liner for engine cylinders. 2,449,771, Sept. 21.

Dole Valve Company, assignee: *See*—
Brown, Clyde A.

Domler, Charles A., Johnston, R. I. Strap. 2,449,884, Sept. 21.

Domler, Charles A., Johnston, R. I. Strap with inseparable ends. 2,449,885, Sept. 21.

Dougherty, John S., Jackson Heights, N. Y. Apparatus for magnifying the images on television screens. 2,449,886, Sept. 21.

Dow Chemical Company, The, assignee: *See*—
Cornell, Robert C.
Meyer, Frederick J.

Drackett Company, The, assignee: *See*—
Calvert, Francis E., and Bury.

Drake, Frederick H., Boonton, N. J. Jib sheet shackle. 2,449,593, Sept. 21.

Druliner, Joseph M., North Hollywood, assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Collator. 2,449,594, Sept. 21.

Dumore Company, The, assignee: *See*—
Bluemink, Gary G.

Dunlop Rubber Company Limited, assignee: *See*—
Butler, Henry J.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Blake, Ralph K.
Du Pont, James Q., and Jones.
Filbert, William F.
Miller, Henry C., and Pratt.

Du Pont, James Q., Wilmington, Del., and E. R. Jones, Philadelphia, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Blasting plug. 2,449,645, Sept. 21.

Durkee, E. Leland: *See*—
Jameson, William H., and Durkee.

Duro-Test Corporation, assignee: *See*—
Cox, James L.

Duttera, William S., Lynbrook, N. Y., assignor to Radio Corporation of America. Apparatus for detecting variations in load impedances. 2,449,739, Sept. 21.

Eastman Kodak Company, assignee: *See*—
Hanson, Wesley T., Jr.
Weissberger, Arnold.

Eastman Oil Well Survey Company, assignee: *See*—
Schmidt, Fred H.

Edel, Robert O., Frankenmuth, and L. Sutton, Bridgeport, Mich. Collet chuck. 2,449,887, Sept. 21.

Edwards, Franklin W., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Compressor drive control. 2,449,888, Sept. 21.

Eichberg, Robert L., Arlington, Va., and H. R. Montague, Washington, D. C. Battery adapter. 2,449,550, Sept. 21

Eichendorff, Bruno E., San Francisco, Calif. Spoon leader. 2,449,692, Sept. 21.

Eisen, Carl, Bronx, N. Y. Fluid press motor and control valve therefor. 2,449,889, Sept. 21.

Electronized Chemicals Corporation, assignee: *See*—
Brasch, Arno, and Huber.

Ellis, William D., III, Atlanta, Ga. Reinforced plastic material. 2,449,595, Sept. 21.

Emde, Kurt, Itasca, Ill., assignor to Zenith Radio Corporation. Vacuum tube lock. 2,449,646, Sept. 21.

Emulsol Corporation, The, assignee: *See*—
Cahn, Frank J.

Ericson, Sigge H., Brooklyn, N. Y. Sludge pumping apparatus. 2,449,596, Sept. 21.

Fairbanks, Henry N., Beverly Hills, assignor to Mitchell Camera Corporation, West Hollywood, Calif. Kinetograph movement. 2,449,693, Sept. 21.

Fairchild Camera and Instrument Corporation, assignee: *See*—
Penfold, Hilliard F., and Corte.

Faulkner, Donald: *See*—
Staudinger, Hanns P., Faulkner, and Wright.

Felser, Joseph, Jr., Guam, Marianas Islands. Pressure unloader for compressors. 2,449,740, Sept. 21.

Ferrenberg, Roy R., assignor of twenty-five per cent to S. Switzer, Latrobe, Pa. Window blind and curtain rod holder. 2,449,597, Sept. 21.

Fetzer, Maurice C., Wyomissing, and W. H. Kemper, Temple, assignors to The Carpenter Steel Company, Reading, Pa. Cold hobbable steel. 2,449,806, Sept. 21.

Filbert, William F., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Nitration product of a hydroxy amide. 2,449,843, Sept. 21.

Filtrol Corporation, assignee: *See*—
Gary, Wright W., and Secor.

Fisher, Charles H.: *See*—
Mast, William C., Rehberg, and Fisher.

Fitzgerald, Reginald P., assignor to Pneumatic Drop Hammer Company, Braintree, Mass. Drop hammer. 2,449,647, Sept. 21.

Fitzpatrick, Genevieve M., Portland, Oreg. Baby harness for chairs. 2,449,741, Sept. 21.

Flaws, John, Jr., East Cleveland, Ohio, assignor to General Electric Company. Method of and apparatus for manufacturing flash lamps. 2,449,648, Sept. 21.

Foltis, Anestis, Jackson Heights, N. Y. Toilet paper holder attachment. 2,449,598, Sept. 21.

Forney, James D., Fort Collins, Colo. Welding transformer. 2,449,649, Sept. 21.

Forsythe, John W., deceased, by M. A. Forsythe, executrix, Wilkinsburgh, and E. J. Smotzer, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation. Thawing materials. 2,449,932, Sept. 21.

Forsythe, Mary A., executrix: *See*—
Forsythe, John W.

Foster, George A. R., and J. Gregory, assignors to The British Cotton Industry Research Association, Didsbury, Manchester, England. Method and apparatus for doffing spinning frames and the like. 2,449,742, Sept. 21.

Frei, Jakob R., Sidney, assignor to Bendix Aviation Corporation, New York, N. Y. Coupling means. 2,449,807, Sept. 21.

French, Frederick A.: *See*—
Souders, Mott, Jr., and French.

Friedrich, Ed, Inc., assignee: *See*—
Brinkoeter, Clinton C.

Froelich, Edward, New York, N. Y. Eyeglass. 2,449,694, Sept. 21.

Frondel, Clifford, Flushing, assignor to Reeves-Ely Laboratories, Inc., New York, N. Y. Quartz oscillator plates. 2,449,844, Sept. 21.

Fulton, Joel B., assignor to R. L. Brinson Company, trading as Transport Apparatus and Device Company, High Point, N. C. Air controlled throttle. 2,449,599, Sept. 21.

Galloway, Arthur L., assignor to Tobacco By-Products and Chemical Corporation, Louisville, Ky. Fumigating package. 2,449,695, Sept. 21.

Galvier, Gaston M.: *See*—
Develay, Cesar, and Galvier.

Garand, John C., Springfield, Mass., assignor to United States of America, as represented by the Secretary of War. Telescope mount. 2,449,551, Sept. 21.

Garlick, Robert C., East Longmeadow, Mass. Pick for stringed instruments. 2,449,890, Sept. 21.

Garrett Corporation, Airesearch Manufacturing Company division, The, assignee: *See*—
Andersen, Soren K.

Gary, Charles B.: *See*—
Clausing, George, and Gary.

Gary, Wright W., Los Angeles, and R. B. Secor, South Gate, assignors to Filtrol Corporation, Los Angeles, Calif. Ammoniated acid activated montmorillonite catalyst and preparation thereof. 2,449,891, Sept. 21.

Gates Rubber Company, assignee: *See*—
Nassimbene, Ernest.

Geddes, Walter H., and P. W. Schanke, assignors to United Aircraft Products, Inc., Dayton, Ohio. Oil temperature regulator. 2,449,696, Sept. 21.

Geiger, John F., Buffalo, N. Y. Cargo tie down. 2,449,600, Sept. 21.

General Aniline & Film Corporation, assignee: *See*—
Ney, William O.

General Electric Company, assignee: *See*—
Admiraal, Daniel J. H.
Ayers, Edgar H.
Bias, Frank J., and Lord.
Blake, Harold D., and Winninghoff.
D'Alello, Gaetano F., and Underwood.
Flaws, John, Jr.
Greiner, Alfred.
Isaac, Elmer B., and Rippl.
Keiffer, Raymond L.
Newkirk, Arthur E.
Seaman, Joseph W.
Seitz, August W.
Sellers, Jesse E., and Davis.
Van Horn, Irving H.
Von Hoorn, Fred G.
Welsh, Charles E.
Wilcock, Donald F.

General Mills, Inc., assignee: *See*—
Aske, Leonard E.

General Motors Corporation, assignee: *See*—
Martin, Edward J., and Sproull.
Rippingille, Edward V.

General Tire & Rubber Company, The, assignee: *See*—
Kraft, Herman T.

Ghisletta, Franklin C., Patterson Calif. Hair clip. 2,449,845, Sept. 21.

Giammaria, John J., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Making phosphorus- and sulfur-containing organic reaction products. 2,449,933, Sept. 21.

Giammaria, John J., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,449,934, Sept. 21.

Gibbs, William J., Brooklyn, N. Y. Apparatus for storing stacked articles. 2,449,892, Sept. 21.

Gilman, David M., Chelsea, Mass. Lock bolt or nut. 2,449,846, Sept. 21.

Gilman, Frederick C., Pompton Lakes, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Hermetically sealed submersible pumping structure. 2,449,772, Sept. 21.

Gilman, Martin J., Gilman, Conn. Toy football dummy. 2,449,935, Sept. 21.

Gilman, Wilbert M., Wellesley Hills, Mass., assignor to Cread Engineering and Research Company, Cranston, R. I. Clutch and brake mechanism. 2,449,893, Sept. 21.

Glasgow, Frances K., Long Beach, assignor of forty per cent to H. H. Jamieson, Los Angeles, Calif. Foot wrapper. 2,449,936, Sept. 21.

Glick, Jack, Bronx, assignor to The Gluckin Corporation, New York, N. Y. Brassière. 2,449,808, Sept. 21.

Gluckin Corporation, The, assignee: *See*—
Glick, Jack.

Gohr, Edwin J., Summit, H. Z. Martin, Roselle, and C. W. Tyson, Summit, N. J., assignors to Standard Oil Development Company. Apparatus for contacting solids and gaseous fluids. 2,449,601, Sept. 21.

Goldman, Maurice A., assignor to Johnson & Johnson, New Brunswick, N. J. Corrugated disk filter. 2,449,809, Sept. 21.

Goodman Manufacturing Company, assignee: *See*—
Holstein, John H.
Sloane, William W.

Gorham, John E., Spring Lake, and H. A. Zahl, Long Branch, N. J. Spark gap. 2,449,552, Sept. 21.

Grant Oil Tool Company, assignee: *See*—
Santiago, James J.

Graves, Arnold, Surbiton, and T. J. Dawes, Bridgefield, Farnham, assignors to Alltools, Limited, Brentwood, Middlesex, England. Ionization chambers, Geiger-Muller tubes, and the like. 2,449,697, Sept. 21.

Gregory, James: *See*—
Foster, George A. R., and Gregory.

Greiner, Alfred, Cleveland Heights, Ohio, assignor to General Electric Company. Incandescent lamp and method of manufacture. 2,449,650, Sept. 21.

Groetchen, Richard, Chicago, Ill. Rotary cooker. 2,449,937, Sept. 21.

Gross, Frederick B.: *See*—
Helber, Carlyle L., and Gross.

Guenther, Frank S., Trenton, N. J. Device for decorating materials. 2,449,810, Sept. 21.

Gyro-Balance Corporation, assignee: *See*—
Minorsky, Nicolai.

H-P-M Development Corporation, assignee: *See*—
Waldie, George A.

Hall, Fred B., assignor to Riley Stoker Corporation, Worcester, Mass. Stoker tuyère. 2,449,602, Sept. 21.

Hallock, Robert L., Larchmont, N. Y. Grid for ice trays. 2,449,743, Sept. 21.

Hamilton, Robert M.: *See*—
Nichols, Peter L., Jr., and Hamilton.

Hammon, Lester, Poplar Bluff, Mo. Cornstalk lifting device. 2,449,603, Sept. 21.

Hammond Machinery Builders, Inc., assignee: *See*—
Krueger, Edward C.

Hansel, Paul G., Red Bank, N. J. Radio compass. 2,449,553, Sept. 21.

Hansen, Fred E., Lakewood, Ohio. Coupling. 2,449,938, Sept. 21.

Hanson, Wesley T., Jr., Knoxville, assignor to Eastman Kodak Company, Rochester, N. Y. Integral mask for color film. 2,449,966, Sept. 21.

Hardt, Ben F.: *See*—
Noble, John C., and Hardt.

Hardwick, Pierre M., Los Angeles, Calif. Swivel coupling. 2,449,744, Sept. 21.

Harford, Dwight L., assignor to A. P. Johnson, Downey, Calif. Multivoltage dry battery. 2,449,811, Sept. 21.

Hargreaves, Robert, and A. O. Roy, assignors to Whitin Machine Works, Whitinsville, Mass. Spindle brake. 2,449,773, Sept. 21.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Bailey, Christopher E. G.
Bouman, Johannes A. J.

Hartley, Leonard, Mount Shasta, Calif. Pole butt. 2,449,698, Sept. 21.

Haseltine, Stacy B., La Grange, assignor to W. H. Miner, Inc., Chicago, Ill. Retractable keeper for door fasteners. 2,449,774, Sept. 21.

Hathaway, Claude M., assignor to M. S. Merrill, Denver, Colo. Electronic circuit for triggering stroboscopic devices. 2,449,651, Sept. 21.

Hayes, Ralph F.: *See*—
Carswell, Thomas S., and Hayes.

Hays, John H., assignee: *See*—
Van Riper, John C.

Heard, Llewellyn, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Manufacturing alumina gel from amalgamated aluminum. 2,449,847, Sept. 21.

Hefele, John R., Yonkers, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Pulse-actuated circuit. 2,449,848, Sept. 21.

Helber, Carlyle L., U. S. Navy, and F. B. Gross, Langley, Va. Hydropneumatic accumulator type power plant with differential speed motor. 2,449,554, Sept. 21.

Hendriksen, Wealtha E., assignor to Hydrocarbon Research, Inc., New York, N. Y. Catalytic synthesis of hydrocarbons. 2,449,775, Sept. 21.

Henley's, W. T., Telegraph Works Company Limited, assignee: *See*—
Brett, George N., and Smith.

Hennessy, James J., Montclair, N. J. Lubricator distributor. 2,449,894, Sept. 21.

Hennessy, James J., Montclair, N. J. Railway journal bearing. 2,449,895, Sept. 21.

Hennie, Doris J., Little Falls, N. J. Blouse anchor. 2,449,896, Sept. 21.

Herman Pneumatic Machine Company, assignee: *See*—
Johnston, Loyal L.

Hervey, Laurence R. B., Concord, and A. C. Whitaker, Boston, Mass., assignors to the United States of America, as represented by the Secretary of War. Water-soluble coating composition for paper. 2,449,812, Sept. 21.

Hess, Arthur L., Cincinnati, Ohio, assignor to Ditto, Incorporated, Chicago, Ill. Unit strip assembly method and apparatus. 2,449,776, Sept. 21.

Heston, Allen L., assignor to National Rubber Machinery Company, Akron, Ohio. Extrusion press. 2,449,652, Sept. 21.

Heyberger, Francis, Old Greenwich, Conn. Writing instrument. 2,449,939, Sept. 21.

Heywood-Wakefield Company, assignee: *See*—
Bell, Alfred B.

Higgins, John M., Boulder City, Nev. Tourist film guide. 2,449,699, Sept. 21.

Hinkle, George A., New York, and A. T. Weger, Baldwin, N. Y. Knee lock for artificial legs. 2,449,897, Sept. 21.

Hixson, Arthur W., Leonia, N. J., and R. Miller, New York, N. Y., assignors to The Chemical Foundation, Incorporated. Recovery of acidic gases. 2,449,537, Sept. 21.

Holmes, Robert E., Los Angeles, Calif., assignor to Hughes Tool Company, Houston, Tex. Locking means for flexible chutes. 2,449,849, Sept. 21.

Holstein, John H., assignor to Goodman Manufacturing Company, Chicago, Ill. Feeding mechanism for shaker conveyers. 2,449,777, Sept. 21.

Hopkins, Werner B., and T. T. Oberg, Dayton, Ohio. Overload release flexible coupling. 2,449,555, Sept. 21.

Hower, Bruce A., Gary, Ind. Cadaver lifter. 2,449,898, Sept. 21.

Hubbard and Company, assignee: *See*—
Ackerman, Harold S.

Hubbard, Harriette E., assignee: *See*—
Hubbard, Irvin R.

Hubbard, Irvin R., Beaver Dam, Wis., assignor, by decree of court, to H. E. Hubbard. Fish lure. 2,449,700, Sept. 21.

Huber, Wolfgang: *See*—
Brasch, Arno, and Huber.

Hughes Tool Company, assignee: *See*—
Holmes, Robert E.

Huhle, Alwin P., Elmont, N. Y. Automobile jack. 2,449,850, Sept. 21.

Hyde, Frank J., Sharon, Pa. Clothes pole and cap therefor. 2,449,778, Sept. 21.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Organo-di-siloxanes and making them. 2,449,940, Sept. 21.

Hydrocarbon Research, Inc., assignee: *See*—
Hendriksen, Wealtha E.

Imperial Chemical Industries Limited, assignee: *See*—
Bacon, Reginald G. R., Taylor, and Wood.

Imperial, Michael, University City, assignor to Skinner & Kennedy Stationery Company, St. Louis, Mo. Folding hand fan. 2,449,701, Sept. 21.

International Business Machines, assignee: *See*—
Leathers, Ward, and Di Monico.

International Paper Box Machine Company, The, assignee: *See*—
Chapman, Fred H.

Isaac, Dorothy J., administratrix: *See*—
Isaac, Elmer B., and Rippl.

Isaac, Elmer B., deceased, by D. J. Isaac, administratrix, University Heights, and F. J. Rippl, Cleveland, Ohio, assignors to General Electric Company. Filament forming apparatus. 2,449,653, Sept. 21.

Iwerks, Ubbe E., Van Nuys, assignor to Walt Disney Productions, Burbank, Calif. Animating device. 2,449,702, Sept. 21.

Jackson, Byron, Co., assignee: *See*—
Lundeen, Chester A.

Jackson, Corwill, assignor to Jackson Vibrators, Inc., Ludington, Mich. Concrete placement machine. 2,449,851, Sept. 21.

Jackson, James O., Crafton, Pa., assignor to Pittsburgh-Des Moines Company. Quick-acting valve. 2,449,604, Sept. 21.

Jackson Vibrators, Inc., assignee: *See*—
Jackson, Corwill.

Jaeschke, Ralph L., Kenosha, Wis., assignor to M. P. Winther, Waukegan, Ill. Speed control for dynamoelectric apparatus. 2,449,779, Sept. 21.

Jameson, William H., and E. L. Durkee, Bethlehem, Pa., assignors to Bethlehem Steel Company. Wing raising device for floating dry docks. 2,449,780, Sept. 21.

Jameson, William H., and E. L. Durkee, Bethlehem, Pa., assignors to Bethlehem Steel Company. Apparatus for lifting massive objects. 2,449,781, Sept. 21.

Jamieson, Hamer H., assignee: *See*—
Glasgow, Frances K.

Jauhiainen, Donald, Iron River, Mich. Eggshell remover. 2,449,941, Sept. 21.

Jefferson Electric Company, assignee: *See*—
Rickmeyer, Ernst W.

Jessop, Robert E. E., West Vancouver, British Columbia, Canada. Shaft coupling. 2,449,654, Sept. 21.

Jewell, Walter E., Los Angeles, Calif. Shot blasting machine. 2,449,745, Sept. 21.

Johns, Henry S., Cleveland Heights, Ohio. Basket. 2,449,899, Sept. 21.

Johnson, A. Parley, assignee: *See*—
Harford, Dwight L.

Johnson, Cloyd B., Tulsa, Okla. Snatch block. 2,449,703, Sept. 21.

Johnson, Glen F., assignor to Bower Roller Bearing Company, Detroit, Mich. Making antifriction bearing assemblies. 2,449,942, Sept. 21.

Johnson, Glen F., assignor to Bower Roller Bearing Company, Detroit, Mich. Making antifriction bearings. 2,449,943, Sept. 21.

Johnson, Glen F., assignor to Bower Roller Bearing Company, Detroit, Mich. Assembling roller bearings and lock rings therefor. 2,449,944; Sept. 21.

Johnson & Johnson, assignee: *See*—
Goldman, Maurice A.

Johnston, Loyal L., Zelienople, assignor to Herman Pneumatic Machine Company, Pittsburgh, Pa. Apparatus for forming molds for centrifugal casting and centrifugally casting products therein. 2,449,900, Sept. 21.

Jones, Earl R.: *See*—
Du Pont, James Q., and Jones.

Jones, Frank L., Millbank, London, assignor to Minister of Supply, in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England. Spark gap. 2,449,967, Sept. 21.

Jones, Kenneth W., Enfield, assignor to K. Warner-Jones and Company Limited, London, England. Gear drive for printing and other machines. 2,449,852, Sept. 21.

Jones, Philip, Los Angeles, Calif. Inclinometer. 2,449,704, Sept. 21.

Jones, Richard, assignor to Walt Disney Productions, Burbank, Calif. Sound picture magazine projector of the continuously moving film type. 2,449,705, Sept. 21.

Jones, Theodore C., Louisville, Ky. Galvanic water processing apparatus. 2,449,706, Sept. 21.

Kaiser Company, The, assignee: *See*—
Bedford, Clay P.

Kaiser, William A., Syracuse, N. Y. Electromagnetic drive. 2,449,901, Sept. 21.

Karp, George, Los Angeles, Calif. Inhaler. 2,449,853. Sept. 21.

Keese, Beverly W.: *See*—
Buckendale, Lawrence R., and Keese.

Keiffer, Raymond L., Cleveland Heights, Ohio, assignor to General Electric Company. Coating apparatus for tubular objects. 2,449,655, Sept. 21.

Kell, Robert W., Oak Park, assignor to National Aluminate Corporation, Chicago, Ill. Process of minimizing the production of foam in steam generators. 2,449,656, Sept. 21.

Kelton, Gilbert P., Dorris, Calif. Rotary cylindrical splitter and planer head. 2,449,605, Sept. 21.

Kemper, William H.: *See*—
Fetzer, Maurice C., and Kemper.

Kershaw, Knox: *See*—
Praytor, Dennis M., and Kershaw.

Kertesz, Carl: *See*—
Tanguay, Edgar, Kertesz, and Krakauer.

Klersted, Wynkoop, Jr., Scarsdale, assignor to The Texas Company, New York, N. Y. Filtration. 2,449,902, Sept. 21.

Kinetic Chemicals, Inc., assignee: *See*—
Rhodes, William W.

Kinkel, Revere P., assignor to Buffalo Ankerite Gold Mines, Ltd., South Porcupine, Ontario, Canada. Wear plate for jaw crushers. 2,449,746, Sept. 21.

Kirkley, Henry B., Camden, N. J. Differential leakage indicator. 2,449,556, Sept. 21.

Kishline, Floyd F., assignor to Nash-Kelvinator Corporation, Kenosha, Wis. Piston. 2,449,657, Sept. 21.

Klause, Edward J.: *See*—
Linder, Otto A., and Klause.

Knauert, William F., Yonkers, assignor to Sonotone Corporation, Elmsford, N. Y. Electromagnetic earphone receiver. 2,449,557, Sept. 21.

Knitter, Chester C., Chicago, Ill. Bicycle stoplight. 2,449,782, Sept. 21.

Kraft, Herman T., assignor to The General Tire & Rubber Company, Akron, Ohio. Flexible cover for tire repair vulcanizers and method of making. 2,449,606, Sept. 21.

Krakauer, Samuel: *See*—
Tanguay, Edgar, Kertesz, and Krakauer.

Krakauer, Wallace: *See*—
Tanguay, Edgar, Kertesz, and Krakauer.

Kramer, Ferdinand, Port Chester, N. Y. Lounge chair. 2,449,747. Sept. 21.

Kraus, Michael B., Jr.: *See*—
Shriro, Morris A., and Kraus.

Krueger, Edward C., Otsego, assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich. Casting machine. 2,449,854, Sept. 21.

Laidig, Alfred H., Bloomfield, and F. T. May, Verona, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Apparatus for coating the inside surfaces of tubular vitreous envelopes. 2,449,783, Sept. 21.

La Macchia, Pasquale, Gilroy, Calif. Drying tray. 2,449,658, Sept. 21.

Lane, Russell C., San Carlos, Calif. Quick coupling for hose. 2,449,659, Sept. 21.

Langstaff, Robert, Donora, Pa. Sectional dining table. 2,449,903, Sept. 21.

Lanier, Harold H., United States Navy, Langdale, Ala., and R. E. Mueller, United States Navy, St. Louis, Mo. Cathode-ray tube. 2,449,558, Sept. 21.

La Riccia, Anthony, Cleveland Heights, and T. W. Plante, Cleveland, Ohio. Pipe coupling. 2,449,607, Sept. 21.

Lawhorne, William M., Primos, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa. Cable connector. 2,449,660, Sept. 21.

Lawson, Anna, Detroit, Mich. Safety lowering device for use as a fire escape. 2,449,813, Sept. 21.

Leathers, Chester F., Detroit, Mich. Welding mechanism. 2,449,707, Sept. 21.

Leathers, Ward, and G. S. Di Monico, Brooklyn, assignors to International Business Machines Corporation, New York, N. Y. Magnetic leveling device for gyroscopic rotors. 2,449,661, Sept. 21.

Leeson, Stanley R., Dallas, Tex. Journal bearing sleeve. 2,449,662, Sept. 21.

Le May, Braudice B., Jr., Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Transmission and control therefor. 2,449,608, Sept. 21.

Lewis, Arthur T., Toronto, Ontario, Canada. Apparatus for handling rolls of flexible sheet material. 2,449,945, Sept. 21.

Liman, Kerupe H., Rye, N. Y. Safety device for motorists. 2,449,784, Sept. 21.

Linder, Otto A., and E. J. Klause, Philadelphia, Pa. Ladder foot. 2,449,609, Sept. 21.

Lindow, Rudolph F.: *See*—
Miller, Arthur E., Viall, and Lindow.

Lindsay, Leslie B., Kirkland Lake, Ontario, Canada. Hockey goal. 2,449,708, Sept. 21.

Lippman, Alfred, Jr., R. L. Comstock, Weeks, and E. B. Benjamin, assignors to Bay Chemical Company, Inc., New Orleans, La. Composition and process for curing lumber and product. 2,449,785, Sept. 21.

Little, Arthur D., Inc., assignee: *See*—
Chambers, John M.

Lockwood, George H., and D. F. Way, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Getter. 2,449,786, Sept. 21.

Long, John D., Westfield, N. J., assignor to Standard Oil Development Company. Extractive distillation of butanes and butenes with acetone solvent. 2,449,610, Sept. 21.

Lord, Harold W.: *See*—
Bias, Frank J., and Lord.

Lorraine, Edward C., Elmhurst, N. Y. Edge molding. 2,449,904, Sept. 21.

Lotts, Delbert L., Kent, Ohio, R. T. Bucy, and H. E. Waldron, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Power unit. 2,449,905, Sept. 21.

Lubrizol Development Corporation, The, assignee: *See*—
Byrkit, Gordon D.

Luft, Homer G., Dearborn, Mich. Snap-action latch for work holding vice. 2,449,748, Sept. 21.

Lundeen, Chester A., Los Angeles, assignor to Byron Jackson Co., Vernon, Calif. Well pipe elevator. 2,449,559, Sept. 21.

Lupton, McSherry, Winchester, Va. Endless conveyer for fruit grading machines. 2,449,611, Sept. 21.

Lyne, Joe A.: *See*—
Dake, George E., and Lyne.

Mackie-Lovejoy Manufacturing Company, assignee: *See*—
Renner, William M.

Magnavox Company, The, assignee: *See*—
Pridham, Edwin S.

Marcalus, Nicholas, West Englewood, N. J. Interfolding. 2,449,663, Sept. 21.

Marholz, Richard C., assignor to Belmont Radio Corporation, Chicago, Ill. Longitudinal actuating apparatus. 2,449,855, Sept. 21.

Marisic, Milton M., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Preparation of spheroidal silica-alumina gel particles. 2,449,664, Sept. 21.

Markem Machines Company, assignee: *See*—
Putnam, David F., and Cheeseman.

Marshall, Samuel W., Jr., U. S. Army. Gas operation of firearms action slides. 2,449,560, Sept. 21.

Martin, Edward J., Pleasant Ridge, and W. T. Sproull, assignors to General Motors Corporation, Detroit, Mich. Method and means for demagnetizing. 2,449,946, Sept. 21.

Martin, Homer Z.: *See*—
Gohr, Edwin J., Martin, and Tyson.

Mast, William C., Philadelphia, C. E. Rehberg, Glenside, and C. H. Fisher, Abington, Pa., assignors to The United States of America as represented by the Secretary of Agriculture. Synthetic rubberlike materials. 2,449,612, Sept. 21.

May, Frederick T.: *See*—
Laidig, Alfred H., and May.

McGary, Charles E.: *See*—
McGary, Francis L. and C. E.

McGary, Francis L., and C. E. Hardinsburg, Ky. Shear. 2,449,561, Sept. 21.

McNitt, Robert J., Perth Amboy, N. J. Apparatus for regulating the transfer of heat in fused bath electrolytic cells. 2,449,856, Sept. 21.

Meadows, Robert L., Arlington, Va. Heavy duty trailer and tractor lifting unit. 2,449,947, Sept. 21.

Meier, Allen S., Xenia, Ohio, assignor to The United States of America as represented by the Secretary of War. Antenna. 2,449,562, Sept. 21.

Melanson, Joseph W., Toronto, Ontario, Canada. Saw set. 2,449,814, Sept. 21.

Merrill, Marcellus S., assignee: *See*—
Hathaway, Claude M.

Mesite, James V., Baltimore, Md. Refrigerator defrosting deflector. 2,449,709, Sept. 21.

Metals & Controls Corporation, assignee: *See*—
Ottmar, Jerome.

Metzger, William J., East Cleveland, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio. Uncoupling mechanism. 2,449,665, Sept. 21.

Meyer, Frederick J., assignor to The Dow Chemical Company, Midland, Mich. Preservation of cellulosic materials. 2,449,787, Sept. 21.

Miller, Arthur E., G. K. Viall, Milwaukee, and R. F. Lindow, Wauwatosa, assignors to Chain Belt Company, Milwaukee, Wis. Concrete spreading apparatus. 2,449,710, Sept. 21.

Miller, Henry C., Claymount, and B. C. Pratt, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Reactions of inorganic polyisocyanates and polyisothiocyanates. 2,449,613, Sept. 21.

Milligon, Joseph H., Framingham, Mass. Door lock. 2,449,711, Sept. 21.

Milne, John S., assignor to Sears, Roebuck and Co., Chicago, Ill. Flush tank mechanism. 2,449,948, Sept. 21.

Miner, W. H., Inc., assignee: *See*—
Haseltine, Stacy B.

Minorsky, Nicolai, Bethesda, Md., assignor to Gyro-Balance Corporation, Greenwich, Conn. Balancing machine. 2,449,563, Sept. 21.

Mitchell Camera Corporation, assignee: *See*—
Fairbanks, Henry N.

Monsanto Chemical Company, assignee: *See*—
Carswell, Thomas S., and Hayes.

Montague, Homer R.: *See*—
Eichberg, Robert L., and Montague.

Morris, Rupert C.: *See*—
Shokal, Edward C., and Morris.

Morris, Rupert C., and J. L. Van Winkle, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Hydrogenated linear polymers and copolymers of branch-chain hexadienes. 2,449,949, Sept. 21.

Moseley, Nicholas, Sandy Hook, Conn. Culinary strainer for puréeing food. 2,449,686, Sept. 21.

Moulsdale, Andrew G., Abingdon, and J. N. Bruce, Baltimore, Md. Eyepiece adapter. 2,449,564, Sept. 21.

Mueller, Max B., Dumont, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Oxidation of heterocyclic aromatic nitrogen compounds. 2,449,906, Sept. 21.

Mueller, Robert E.: *See*—
Lanier, Harold H., and Mueller.

Mulvany, Harry A., Berkeley, Calif. Heating element support. 2,449,712, Sept. 21.

Nageotte, Neil S., Lansing, Mich. Equipment for attaching price tags to greeting cards. 2,449,614, Sept. 21.

Nash-Kelvinator Corporation, assignee: *See*—
Kishline, Floyd F.

Nassimbene, Ernest, assignor to Gates Rubber Company, Denver, Colo. Connector for belt. 2,449,950, Sept. 21.

National Aluminate Corporation, assignee: *See*—
Kell, Robert W.

National Malleable and Steel Castings Company, assignee: *See*—
Metzger, William J.

National Rubber Machinery Company, assignee: *See*—
Heston, Allen L.

National Sewing Machine Company, assignee: *See*—
Best, Clarence S.

Nemeth, Otto R., Chicago, Ill., assignor, by mesne assignments, to Helene Curtis Industries, Inc. Cooling system for portable motion-picture projectors. 2,449,713, Sept. 21.

Neuhoff, Ermaline G., and B. F. Davenport, Los Angeles, Calif. Combination undergarment. 2,449,857, Sept. 21.

Newkirk, Arthur E., Schenectady, N. Y., assignor to General Electric Company. Resolution of azeotropic mixtures of chlorosilanes. 2,449,815, Sept. 21.

New Products Corporation, assignee: *See*—
Banker, Oscar H.

Ney, William O., Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y. Stabilized heat polymerizable N-vinyl pyrrole compositions. 2,449,951, Sept. 21.

Nichols, Peter L., Jr., and R. M. Hamilton, Philadelphia, Pa., assignors to The United States of America as represented by the Secretary of Agriculture. Plastic material from allyl starch. 2,449,816, Sept. 21.

Noble, John C., Bath Township, Greene County, and B. F. Hardt, Dayton, Ohio. Radio system. 2,449,565, Sept. 21.

Nordell, Robert, Sundbyberg, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden. Device for signalling or releasing by electric power capacitors. 2,449,817, Sept. 21.

Oberg, Ture T.: *See*—
Hopkins, Werner B., and Oberg.

Olin, Norman E., New York, N. Y. Picture frame. 2,449,907, Sept. 21.

Olsen, Arnold O., Brooklyn, N. Y. Brush cleaning device. 2,449,818, Sept. 21.

Olson, John W.: *See*—
Bechle, Charles W., and Olson.

Osborn Manufacturing Company, The, assignee: *See*—
Peterson, Ruben O.

Osman, Ertogroul: *See*—
Alvarez, Octavio J., and Osman.

Ottmar, Jerome, assignor to Metals & Controls Corporation, Attleboro, Mass. Burner safety control system. 2,449,858, Sept. 21.

Parkersburg Rig & Reel Company, The, assignee: *See*—
Dake, George E., and Lyne.

Parkes, Ralph C., Glenside, Pa. Drying machine. 2,449,667, Sept. 21.

Partridge, Maurice W.: *See*—
Short, Wallace F., and Partridge.

Paulus, Charles L., Dayton, Ohio. Aircraft flight stabilizing control unit and system. 2,449,566, Sept. 21.

Peck, Edward B., Elizabeth, N. J., assignor to Standard Oil Development Company. Distillation of oil shale under fluidized conditions. 2,449,615, Sept. 21.

Peet, Nick P., Goose Creek, Tex., assignor to Standard Oil Development Company. Catalytic cracking process. 2,449,617, Sept. 21.

Penfold, Hilliard F., Flushing, and J. P. Della Corte, Forest Hills, N. Y., assignors to Fairchild Camera and Instrument Corporation. Automatic radio compass. 2,449,859, Sept. 21.

Pennella, Samuel, Pompton Lakes, N. J. Surface condenser. 2,449,616, Sept. 21.

Pennsylvania Industrial Chemical Corporation, assignee: *See*—
Corkery, Frank W.

Perwas, Ludwig F., Bronx, N. Y. Fountain pen. 2,449,567, Sept. 21.

Peterson, Burt A., assignor to Barber-Colman Company, Rockford, Ill. Winder. 2,449,788, Sept. 21.

Peterson, Ruben O., University Heights, assignor to The Osborn Manufacturing Company, Cleveland, Ohio. Method of and apparatus for making brushes. 2,449,668, Sept. 21.

Philco Corporation, assignee: *See*—
Shoemaker, Malcolm G.

Phillips Petroleum Company, assignee: *See*—
Carnell, Paul H.

Pittsburgh-Des Moines Company, assignee: *See*—
Jackson, James O.

Plante, Thomas W.: *See*—
La Riccia, Anthony, and Plante.

Pneumatic Drop Hammer Company, assignee: *See*—
Fitzgerald, Reginald P.

Pohlers, Alfred J., Joliet, Ill. Garment conveyer. 2,449,669, Sept. 21.

Pointer, Robert W., Portland, Oreg. Fifth wheel assembly. 2,449,749, Sept. 21.

Pratt, Burt C.: *See*—
Miller, Henry C., and Pratt.

Praytor, Dennis M., and K. Kershaw, Birmingham, Ala. Ballast stripper. 2,449,714, Sept. 21.

Prevost, Charles, assignor to Societe Des Usines Chimiques Rhone-Poulenc, Paris, France. Preparation of 2-amino-4-methyl pyrimidine. 2,449,908, Sept. 21.

Pridham, Edwin S., Oakland, Calif., assignor to The Magnavox Company, Fort Wayne, Ind. Manufacturing condensers. 2,449,952, Sept. 21.

Pritchard, Lena L., Los Angeles, Calif. Foldable cart and car seat. 2,449,618, Sept. 21.

Puddicombe, Albert B., North Hollywood, assignor to B. H. Stauffer, Los Angeles, Calif. Posture demonstrating device. 2,449,715, Sept. 21.

Purington, Ellison S., Gloucester, Mass., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Multiplex radio communication. 2,449,819, Sept. 21.

Putnam, David F., Keene, and C. H. Cheeseman, Marlboro, assignors to Markem Machine Company, Keene, N. H. Ink reservoir for marking machines. 2,449,909, Sept. 21.

Quiring-Owston, Inc., assignee: *See*—
Quiring, William.

Quiring, William, assignor to Quiring-Owston, Inc., Wichita, Kans. Folding golf club cart. 2,449,910, Sept. 21.

Radio Corporation of America, assignee: *See*—
Anderson, Earl I.
Duttera, William S.
Purington, Ellison S.
Roberts, Walter V. B.
Snyder, Richard L., Jr.

Rapp, John, Rapid City, S. Dak. House moving dolly. 2,449,670, Sept. 21.

Raybourn, Claude D., Denver, Colo. Nail driving attachment for pneumatic hammers. 2,449,860, Sept. 21.

Redmond, Rollen, Arlington, Mass. Fastener for storm windows and the like. 2,449,750, Sept. 21.

Reeves-Ely Laboratories, Inc., assignee: *See*—
Frondel, Clifford.

Rehberg, Chessie E.: *See*—
Mast, William C., Rehberg, and Fisher.

Reiber, Albert H., deceased, by E. Y. Reiber, executrix, Evanston, assignor to Teletype Corporation, Chicago, Ill. Mechanical deciphering system. 2,449,789, Sept. 21.

Reiber, Emily Y., executrix: *See*—
Reiber, Albert H.

Reichold, Ludwig, Winsted, assignor to The Silex Company, Hartford, Conn. Seal breaker for coffee makers. 2,449,619, Sept. 21.

Reichold, Ludwig, Winsted, assignor to The Silex Company, Hartford, Conn. Filtering device for coffee makers. 2,449,620, Sept. 21.

Reney, Jules F., Victoria, British Columbia, Canada. Automatic fireguard for motion-picture projectors. 2,449,716, Sept. 21.

Renner, William M., assignor to Mackie-Lovejoy Manufacturing Company, Chicago, Ill. Shoe tree. 2,449,861, Sept. 21.

Rhodes, William W., Westtown, Pa., assignor to Kinetic Chemicals, Inc., Wilmington, Del. Pyrethrum extract and propellant solution containing it. 2,449,671, Sept. 21.

Rich, William A., Leipsic, Ohio. Sand blast nozzle control. 2,449,672, Sept. 21.

Rickmeyer, Ernst W., Elmhurst, assignor to Jefferson Electric Company, Bellewood, Ill. Centrifugal circuit breaker. 2,449,862, Sept. 21.

Riley Stoker Corporation, assignee: *See*—
Hall, Fred B.

Rippingille, Edward V., Farmington, assignor to General Motors Corporation, Detroit, Mich. Pressure responsive automatic control. 2,449,953, Sept. 21.

Rippl, Francis J.: *See*—
Isaac, Elmer B., and Rippl.

Roberts, Ingham S., Ridley Park, Pa. Slide rule. 2,449,954, Sept. 21.

Roberts, Walter V., Princeton, N. J., assignor to Radio Corporation of America. Comparison of radio frequency circuit losses. 2,449,621, Sept. 21.

Robertson, Charles A., San Francisco, Calif. Hydraulic clutch. 2,449,717, Sept. 21.

Robeson, Max O.: *See*—
Bludworth, Joseph E., Robeson, and Truby.

Roethell, Bruno E., Cranford, N. J., assignor to Standard Oil Development Company. Multiple stage regeneration of spent catalysts. 2,449,622, Sept. 21.

Rogers, George V., Waterford, Conn. Lathe chuck. 2,449,751, Sept. 21.

Rosen, Harry, Drexel Hill, assignor to Wyeth Incorporated, Philadelphia, Pa. Extraction and isolation of digitoxin. 2,449,673, Sept. 21.

Rosen, Raphael: *See*—
Zimmer, John C., and Rosen.

Ross, Thomas N., near Seattle, Wash. Cathode-ray tube. 2,449,752, Sept. 21.

Ross, William A., assignor to Weaver Manufacturing Company, Springfield, Ill. Load lifting appliance. 2,449,863, Sept. 21.

Roth, Louis H., Forest Hills, assignor to Commanday-Roth Co., Inc., New York, N. Y. Foldable display device with triangular base. 2,449,911, Sept. 21.

Roy, Albert O.: *See*—
Hargreaves, Robert, and Roy.

Rue, Charles H., Fargo, N. Dak. Snatch block. 2,449,718, Sept. 21.

Rumble, Roy W., Pretoria, Transvaal, Union of South Africa. Mold for forming concrete walls in situ. 2,449,912, Sept. 21.

Rumsey, Edward C., deceased, by L. G. Rumsey, executrix, Detroit, Mich., assignor to L. G. Rumsey. Nozzle holder. 2,449,719, Sept. 21.

Rumsey, Lillian G., assignee, executrix: *See*—
Rumsey, Edward C.

Rutgers Research and Endowment Foundation, assignee: *See*—
Waksman, Selman A., and Schatz.

Saathoff, Clinton W., San Antonio, Tex. Bank or jewelry box. 2,449,722, Sept. 21.

Sanderson, Robert I., Gary, and E. R. Trostle, East Gary, Ind. Grip mechanism for testing machines. 2,449,955, Sept. 21.

Santiago, James J., assignor, by mesne assignments, to Grant Oil Tool Company, Los Angeles, Calif. Sand pump. 2,449,720, Sept. 21.

Santiago, James J., assignor to Grant Oil Tool Company, Los Angeles, Calif. Bailer unloading rack. 2,449,721, Sept. 21.

Sawyer, John F., Millis, Mass. Fish scaling device. 2,449,753, Sept. 21.

Schanke, Phillip W.: *See*—
Geddes, Walter H., and Schanke.

Schatz, Albert: *See*—
Waksman, Selman A., and Schatz.

Schermuly, Alfred J.: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Charles: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Conrad D., A. J., and C., Parkgate, Newdigate, England. Water-borne flare and the like. 2,449,913, Sept. 21.

Schibbye, Lauritz B., Essvik, assignor to Svenska Cellulosa Aktiebolaget, Stockholm, Sweden. Heat exchanging apparatus. 2,449,822, Sept. 21.

Schmidt, Fred H., Dallas, Tex., assignor to Eastman Oil Well Survey Company, Denver, Colo. Inclination indicating device. 2,449,674, Sept. 21.

Schonberg, Mihkel: *See*—
Akerman, John D., and Schonberg.

Schowalter, Lawrence V., Cleveland, Ohio. Blanket wrapper. 2,449,675, Sept. 21.

Schworm, Louis, Jr., Washington, D. C. Bottle warming device. 2,449,723, Sept. 21.

Seaman, Joseph W., Kennett Square, Pa., assignor to General Electric Company. Tripping and interlocking device for circuit breakers. 2,449,820, Sept. 21.
Sears, Roebuck and Co., assignee: *See*—
Milne, John S.
Sebald, Joseph F., Bloomfield, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Separator. 2,449,790, Sept. 21.
Secor, Robert B.: *See*—
Gary, Wright W., and Secor.
Seifter, Joseph: *See*—
Bruce, William F., and Seifter.
Seitz, August W., Euclid, Ohio, assignor to General Electric Company. Method of manufacturing electric incandescent lamps. 2,449,676, Sept. 21.
Seitz, Oskar, Baden, Switzerland. Fitting for connecting pipes by welding. 2,449,754, Sept. 21.
Sellers, Jesse E., Scotia, and J. L. Davis, Schenectady, N. Y., assignors to General Electric Company. Preparing organo-silicon compounds. 2,449,821, Sept. 21.
Setzler, Paul H., Hamilton, Ohio. Welding rod feeder. 2,449,677, Sept. 21.
Shell Development Company, assignee: *See*—
Morris, Rupert C., and Van Winkle.
Shokal, Edward C., and Morris.
Souders, Mott, Jr., and French.
Wachter, Aaron, and Stillman.
Sheridan, Henry M., Erie, Pa. Tool bit and holder therefor. 2,449,823, Sept. 21.
Shoemaker, Malcolm G., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Controlled humidity refrigerator. 2,449,824, Sept. 21.
Shokal, Edward C., Oakland, and R. C. Morris, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Dialkylcyclohexyl glycols and certain derivatives thereof. 2,449,956, Sept. 21.
Short, Wallace F., and M. W. Partridge, Nottingham, England. Manufacture of amidines. 2,449,724, Sept. 21.
Shriro, Morris A., Elberon, and M. B. Kraus, Jr., Red Bank, N. J. Battery mount. 2,449,568, Sept. 21.
Siemens Electric Lamps and Supplies Limited, assignee: *See*—
Treece, Harold R., and Wilkinson.
Silex Company, The, assignee: *See*—
Reichold, Ludwig.
Silverman, Henry H., Jamaica, N. Y. Work holder for lapping latches. 2,449,791, Sept. 21.
Simonetti, Harvey, Hyattsville, Md. Detachable heel. 2,449,914, Sept. 21.
Skinner & Kennedy Stationery Company, assignee: *See*—
Imperial, Michael.
Slater, Frazeur S., Chicago, Ill. Form for molding concrete walls. 2,449,725, Sept. 21.
Slatkin, Alfred D., Toronto, Ontario, Canada, assignor to A. F. Cutten. Direct coating of silver on iron or steel. 2,449,726, Sept. 21.
Sloane, Doris K., New Bedford, Mass. Casing for removably enclosing identifying tags. 2,449,727, Sept. 21.
Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Feeding device for shaker conveyers. 2,449,623, Sept. 21.
Smiley, Hugh, Jr., Henniker, N. H. Cutter bit grinding jig. 2,449,957, Sept. 21.
Smith, Arthur E., Los Angeles, Calif. Hypodermic syringe. 2,449,968, Sept. 21.
Smith, Ernest A.: *See*—
Brett, George N., and Smith.
Smotzer, Edward J.: *See*—
Forsythe, John W.
Snell, Francis A., Chenango Forks, N. Y. Mechanism for converting rotary motion into approximately hypocycloidal motion. 2,449,958, Sept. 21.
Snethun, Hans J., Vancouver, British Columbia, Canada. Artificial hand and arm. 2,449,728, Sept. 21.
Snyder, Richard L., Jr., Princeton, N. J., assignor to Radio Corporation of America. Cathode-ray tube scanning circuit. 2,449,792, Sept. 21.
Societe Des Usines Chimiques Rhone-Poulenc, assignee: *See*—
Prevost, Charles.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Glammaria, John J.
Marisic, Milton M.
Sonotone Corporation, assignee: *See*—
Knauert, William F.
Souders, Mott, Jr., Piedmont, and F. A. French, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Extraction of unsaturated hydrocarbons and selective solvent therefor. 2,449,793, Sept. 21.
Spaht, James F., Baton Rouge, La., assignor to Standard Oil Development Company. Boiler detention trough. 2,449,624, Sept. 21.
Sperry Corporation, The, assignee: *See*—
Ayres, Waldemar A., and Streeter.
Varian, Russell H.
Sprague Electric Company, assignee: *See*—
Barschdorf, Harry O.
Sproull, Wayne T.: *See*—
Martin, Edward J., and Sproull.
Stalder, Herbert F., Harper, Kans. Indicator attachment for planters. 2,449,915, Sept. 21.
Stallcup, Lester B., Phoenix, Ariz. Control syringe. 2,449,678, Sept. 21.
Standard Catalytic Company, assignee: *See*—
Barr, Frank T.
Standard Oil Development Company, assignee: *See*—
Beerbower, Alan, and Zimmer.
Camp, Eliza Q.
Gohr, Edwin J., Martin, and Tyson.
Heard, Llewellyn.
Long, John D.
Peck, Edward B.
Peet, Nick P.
Roethell, Bruno E.
Spaht, James F.
Sweeney, William J.
Zimmer, John C., and Rosen.
Staudinger, Hanns P., Ewell, D. Faulkner, Cambridge, and G. T. Wright, Manchester, England, assignors to The Distillers Company Limited, Edinburgh, Scotland. Vinylidene chloride resin plasticized with a di-ester of endomethylene tetra-hydrophthalic acid. 2,449,959, Sept. 21.
Stauffer, Bernard H.: *See*—
Puddicombe, Albert B., and Stauffer.
Steele, Howard L., Jr., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electron discharge device. 2,449,794, Sept. 21.
Steinschlaeger, Michael, London, England. Production of industrial or power gases. 2,449,729, Sept. 21.
Stillman, Nathan: *See*—
Wachter, Aaron, and Stillman.
Stillwagon, Crawford K., assignor to Well Equipment Mfg. Corp., Houston, Tex. Pipe coupling. 2,449,795, Sept. 21.
Strauss, Morris, Brooklyn, N. Y. Third dimension animated display device, including movable frames. 2,449,825, Sept. 21.
Streeter, Edward C., Jr.: *See*—
Ayres, Waldemar A., and Streeter.
Stuart, Joseph, II, Wilmington, Del., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Die assembly. 2,449,625, Sept. 21.
Supply, Minister of, in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, assignee: *See*—
Jones, Frank L.
Suskind, Joseph, Newport News, Va. Door mat. 2,449,796, Sept. 21.
Suthann, Robert A., Los Angeles, Calif. Magazine type camera. 2,449,626, Sept. 21.
Sutton, Leo: *See*—
Edel, Robert O., and Sutton.
Svenska Cellulosa Aktiebolaget, assignee: *See*—
Schibbye, Lauritz B.
Sweeney, William J., Summit, N. J., assignor to Standard Oil Development Company. Oil prospecting method. 2,449,627, Sept. 21.
Swintosky, Edward P., Kewaunee, Wis. Milk can drying rack. 2,449,628, Sept. 21.
Switzer, Sue, assignee: *See*—
Ferrenberg, Roy R.
Symons, Arthur H., Chicago, Ill. Tie device for wall forms. 2,449,864, Sept. 21.
Tandet, William H., Stamford, Conn. Coupling device. 2,449,916, Sept. 21.
Tanguay, Edgar, Bloomfield, N. J., C. Kertesz, Jamaica, and W. Krakauer, assignors to S. Krakauer, Rockaway Park, N. Y. Machine for forming and applying clips to wire members. 2,449,865, Sept. 21.
Tansley, John A., New Castle, Ind., assignor to Chrysler Corporation, Highland Park, Mich. Surface treatment of metal. 2,449,917, Sept. 21.
Taylor, Harold: *See*—
Bacon, Reginald G. R., Taylor, and Wood.
Taylor, Riley H., Portland, Oreg. Electric heating and ventilating unit. 2,449,755, Sept. 21.
Taylor, Taylor & Hobson Limited, assignee: *See*—
Cox, Arthur.
Taylor, William H., Waukesha County, assignor to The Vilter Manufacturing Company, Milwaukee, Wis. Slush ice making machine. 2,449,730, Sept. 21.
Telefonaktiebolaget L. M. Ericsson, assignee: *See*—
Nordell, Robert.
Teletype Corporation, assignee: *See*—
Reiber, Albert H.
Texas Company, The, assignee: *See*—
Kiersted, Wynkoop, Jr.
Wolf, Alexander.
Therrien, Robert F., Toledo, Ohio. Growth poisoning sewer joint. 2,449,731, Sept. 21.
Thompson, Edward B., Downers Grove, Ill. Child's folding seat. 2,449,629, Sept. 21.
Timken-Detroit Axle Company, The, assignee: *See*—
Buckendale, Lawrence R., and Keese.
Tobacco By-Products and Chemical Corporation, assignee: *See*—
Galloway, Arthur L.
Toles, Louis A., Edgeville Corners, Ohio. Lever operated axially shifting tire removing device. 2,449,960, Sept. 21.

Transport Apparatus and Device Company: *See*—
Fulton, Joel B.
Trautmann, Herbert L., Los Angeles, assignor to Cal-Pan Corporation, Alhambra, Calif. Tail pipe extension. 2,449,756, Sept. 21.
Treece, Harold R., and R. A. Wilkinson, assignors to Siemens Electric Lamps and Supplies Limited, Preston, England. Electrical protective device. 2,449,961, Sept. 21.
Trostle, Eugene R.: *See*—
Sanderson, Robert L., and Trostle.
Truby, Harry A., Jr.: *See*—
Bludworth, Joseph E., Robeson, and Truby.
Tyson, Charles W.: *See*—
Gohr, Edwin J., Martin, and Tyson.
Underwood, James W.: *See*—
D'Alelio, Gaetano F., and Underwood.
United Aircraft Products, Inc., assignee: *See*—
Geddes, Walter H., and Schanke.
Wilkening, Herbert C.
United Shoe Machinery Corporation, assignee: *See*—
Clarke, George.
Universal Oil Products Company, assignee: *See*—
Danforth, Joseph D.
Universal Winding Company, assignee: *See*—
Winslow, Albert E.
Valentine, Harry W., deceased, Oakland, by H. B. Valentine, administratrix, Berkeley, Calif. Sash hardware. 2,449,918, Sept. 21.
Valentine, Helen B., administratrix: *See*—
Valentine, Harry W.
Varian, Russell H., Wantagh, N. Y., assignor to The Sperry Corporation. Electron beam apparatus. 2,449,569, Sept. 21.
Van De Boe, Rexford C., Drexel Hill, Pa. Door check and closer. 2,449,826, Sept. 21.
Van Horn, Irving H., East Cleveland, Ohio, assignor to General Electric Company. Lamp filament support and connection. 2,449,679, Sept. 21.
Van Riper, John C., Radburn, assignor to J. H. Hays, Morristown, N. J. Spinner control mechanism. 2,449,630, Sept. 21.
Van Winkle, John L.: *See*—
Morris, Rupert C., and Van Winkle.
Viall, George K.: *See*—
Miller, Arthur E., Viall, and Lindow.
Vilter Manufacturing Company, The, assignee: *See*—
Taylor, William H.
Violette, Richard J., Washington, D. C. Electrical connector. 2,449,570, Sept. 21.
Visioneering Company, Inc., assignee: *See*—
Baade, Henry.
Vissat, Anthony L., Pittsburgh, Pa. Transversely sliding railway frog. 2,449,757, Sept. 21.
Voege, Clayton B., Indianapolis, Ind. Mold for forming cementitious blocks. 2,449,732, Sept. 21.
Von Hoorn, Fred G., Nichols, Conn., assignor to General Electric Company. Renewable fuse. 2,449,827, Sept. 21.
Vulcan Corporation, assignee: *See*—
Clausing, George, and Gary.
Wachter, Aaron, and N. Stillman, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Dicyclohexylammonium nitrite and its preparation. 2,449,962, Sept. 21.
Wak, Peter T., Jr., and A. J. Carpenter, Lake Orion, Mich. Vehicle tow bar. 2,449,680, Sept. 21.
Waksman, Selman A., New Brunswick, and A. Schatz, Passaic, N. J., assignors to Rutgers Research and Endowment Foundation. Streptomycin and process of preparation. 2,449,866, Sept. 21.
Waldie, George A., Worthington, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Electronic control circuit. 2,449,797, Sept. 21.
Waldman, Rose, Jersey City, N. J. Suit hanger. 2,449,868, Sept. 21.
Waldron, Harold E.: *See*—
Lotts, Delbert L., Bucy, and Waldron.
Walker, Brooks, Piedmont, Calif. Silencer for firearms. 2,449,571, Sept. 21.
Wallace, James M., North Braddock, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,449,867, Sept. 21.
War, United States of America, as represented by the Secretary of, assignee: *See*—
Garand, John C.
Hervey, Laurence R. B., and Whitaker.
Meier, Allen S.
Stuart, Joseph, II.
Ward, Clayton N., Madison, Wis. Method and means for protecting shore and other structures against damage by ice. 2,449,963, Sept. 21.
Warner-Jones, K., and Company Limited, assignee: *See*—
Jones, Kenneth W.
Watson, Paul D., Arlington, Va., assignor to United States of America as represented by the Secretary of Agriculture. Polylactylic acid resins and process for making them. 2,449,828, Sept. 21.
Watson, William F., Bronx, N. Y. Connector. 2,449,869, Sept. 21.
Way, Donald F.: *See*—
Lockwood, George H., and Way.
Weaver Manufacturing Company, assignee: *See*—
Ross, William A.
Weber, Edwin L., Venice, Calif. Hose clamp. 2,449,798, Sept. 21.
Weger, Alfred T.: *See*—
Hinkle, George A., and Weger.
Weissberger, Arnold, assignor to Eastman Kodak Company, Rochester, N. Y. 3-methylsulfonamido-4-amino dimethyl aniline photographic developer. 2,449,919, Sept. 21.
Well Equipment Mfg. Corp., assignor: *See*—
Stillwagon, Crawford K.
Welsch, Charles E., Schenectady, N. Y., assignor to General Electric Company. Polysiloxane resins. 2,449,572, Sept. 21.
Westinghouse Electric Corporation, assignee: *See*—
Laidig, Alfred H. and May.
Lockwood, George H. and Way.
Steele, Howard L., Jr.
Wallace, James M.
Whitaker, Alvin C.: *See*—
Hervey, Laurence R. B., and Whitaker.
White, William S., Denver, Colo. Safety device for fluid supply lines. 2,449,573, Sept. 21.
Whitin Machine Works, assignee: *See*—
Hargreaves, Robert, and Roy.
Wikmark, Elsa H. C., Stockholm, Sweden. Bed equipment. 2,449,758, Sept. 21.
Wilcock, Donald F., Marblehead, Mass, assignor to General Electric Company. Lubricated bearing. 2,449,574, Sept. 21.
Wilhelm, Seymour K., United States Army, Detroit, Mich. Cushioned knob. 2,449,575, Sept. 21.
Wilkening, Herbert C., assignor to United Aircraft Products, Inc., Dayton, Ohio. Valve actuating mechanism. 2,449,733, Sept. 21.
Wilkinson, Ralph A.: *See*—
Treece, Harold R., and Wilkinson.
Williams, Eugene D., Cleveland Heights, assignor, by mesne assignments, to Diversified Designing & Machine Products Corporation, Cleveland, Ohio. Conduit coupling. 2,449,920, Sept. 21.
Wilson, Ray, assignor to R. R. Cook, Chicago, Ill. Air purifier. 2,449,681, Sept. 21.
Winninghoff, Wilford J.: *See*—
Blake, Harold D., and Winninghoff.
Winslow, Albert E., Norwich, Conn., assignor, by mesne assignments, to Universal Winding Company, Cranston, R. I. Yarn winder. 2,449,682, Sept. 21.
Winther, Martin P., assignee: *See*—
Jaeschke, Ralph L.
Wolf, Alexander, Houston, Tex., assignor to The Texas Company, New York, N. Y. Seismic method of locating faults. 2,449,921, Sept. 21.
Wood, Leonard: *See*—
Bacon, Reginald G. R., Taylor, and Wood.
Worthington Pump and Machinery Corporation, assignee: *See*—
Gilman, Frederick C.
Sebald, Joseph F.
Wright, George T.: *See*—
Staudinger, Hanns P., Faulkner, and Wright.
Wunsch, Oscar O., Gulfport, Miss. Medicinal atomizer. 2,449,734, Sept. 21.
Wyeth Incorporated, assignee: *See*—
Bruce, William F., and Seifter.
Charney, Jesse.
Rosen, Harry.
Wyss, Chris, Tillamook, Oreg. Irrigation pipe coupling. 2,449,735, Sept. 21.
Zahl, Harold A.: *See*—
Gorham, John E., and Zahl.
Zenith Radio Corporation, assignee: *See*—
Emde, Kurt.
Zimmer, John C.: *See*—
Beerbower, Alan, and Zimmer.
Zimmer, John C., Union, and B. Rosen, Elizabeth, N. J., assignors to Standard Oil Development Company. Oil composition. 2,449,631, Sept. 21.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Baby pants. L. H. Rand. Re. 23,040, Sept. 21.
Motorcycle windshield. A. T. Comiskey, Sr. Re. 23,039, Sept. 21.
Piston and piston rod assembly. T. R. Smith. Re. 23.041, Sept. 21.

LIST OF PLANT INVENTIONS

Ivy plant. J. Bach. 807, Sept. 21.
Rose plant. P. Mordigan. 806, Sept. 21.

LIST OF DESIGN INVENTIONS

Airplane hanger. D. R. Younger. 151,114, Sept. 21.
Altar, Portable. R. T. Gudell and G. A. Feeny. 151,041, Sept. 21.
Beach bag. E. N. Graham. 151,040, Sept. 21.
Belt, Supporting. J. J. Goldstein. 151,039, Sept. 21.
Boot or similar article, Child's. H. E. Rosen. 151,071, Sept. 21.
Bootee. K. R. Strauss. 151,099, Sept. 21.
Bottle. W. Blitzstein. 151,028, Sept. 21.
Box, Utility. Z. E. Marvin, Jr. 151,061, Sept. 21.
Bracelet, Link. I. and H. Stern. 151,087, Sept. 21.
Brooch or similar article. M. Boucher. 151,029, Sept. 21.
Brooch or the like. A. Casciano. 151,031, Sept. 21.
Cabinet, Frozen food storage and display. J. W. P. Fleming. 151,035–6, Sept. 21.
Camera cover. C. E. Main. 151,059, Sept. 21.
Candelabrum or similar article. W. L. Orme. 151,067, Sept. 21.
Chain for a bracelet or similar article, Expansible link. E. E. Fachon. 151,034, Sept. 21.
Coat. J. F. Strassner. 151,083, Sept. 21.
Cutter, Combined biscuit, doughnut, and pastry. E. J. Kilgore. 151,049, Sept. 21.
Dispensing machine, Popcorn. F. P. Emerson. 151,033, Sept. 21.
Display dispenser. R. G. Jones. 151,048, Sept. 21.
Display sign. E. C. Uihlein. 151,105, Sept. 21.
Dress. M. Macpherson. 151,057–8, Sept. 21.
Dress. J. F. Strassner. 151,094–96, Sept. 21.
Dress. J. F. Strassner. 151,098, Sept. 21.
Dress. V. Tomshinsky. 151,104, Sept. 21.
Dress ensemble. J. F. Strassner. 151,097, Sept. 21.
Earring or similar article. A. Philippe. 151,069, Sept. 21.
Eye shield cups for sun bathing, Pair of. O. W. Lindgren, Jr. 151,051, Sept. 21.
Fish lure. R. A. Vaughn. 151,106–7, Sept. 21.
Food mincer. M. A. Besozzi. 151,026, Sept. 21.
Food warmer and server. C. B. Stevens. 151,082, Sept. 21.
Food warmer and service plate, Child's combined. R. E. Zipser. 151,115, Sept. 21.
Frame, Bicycle. W. H. Walker. 151,110, Sept. 21.
Frame or similar article, Spectacle. N. Buckley. 151,030, Sept. 21.
Fruit juicer. H. J. Talge and E. F. Whitfill. 151,103, Sept. 21.
Game board. D. L. Kreider. 151,050, Sept. 21.
Grid, Baking iron. M. Severson and D. Kraske. 151,077–8, Sept. 21.
Handbag or similar article. D. M. Scott and E. Steinberg. 151,075–6, Sept. 21.
Hobbyhorse. G. St. John. 151,080, Sept. 21.
Holder, Comb. H. E. Dahlen. 151,032, Sept. 21.
Holder, Flash lamp. J. W. Barnes. 151,025, Sept. 21.
Holder, Welding electrode. C. W. Taber. 151,101, Sept. 21.
Housing, Rotary mower. W. H. Huff. 151,045–6, Sept. 21.
Ice crusher. H. J. Talge and A. M. Travis. 151,102, Sept. 21.
Jewelry component. C. D. B. Arcularius. 151,024, Sept. 21.
Lamp. J. Frank and S. R. Geist. 151,037, Sept. 21.
Light shade for an electrical fixture. C. D. McCann. 151,053–4, Sept. 21.
Maintenance machine, Floor. J. Sassano. 151,073, Sept. 21.
Military brush. F. Wagner. 151,109, Sept. 21.
Necklace or similar article. A. Philippe. 151,068, Sept. 21.
Ophthalmic wire. W. A. Rohman. 151,070, Sept. 21.
Pencil, Mechanical. S. G. Lipic. 151,052, Sept. 21.
Portable drainboard, serving tray, and cooling rack, Combined. D. G. Jensen. 151,047, Sept. 21.
Oiler, Hog. G. J. Saffert. 151,072, Sept. 21.
Opener, Fruit jar and bottle. H. L. Nichols. 151,065, Sept. 21.
Receptacle, Heat insulated storage. L. M. Schnitzer. 151,074, Sept. 21.
Robe, Chenille. G. H. McLaughlin. 151,055–6, Sept. 21.
Routing machine. W. F. Huck. 151,044, Sept. 21.
Scale. D. A. Meeker and K. C. Allen. 151,062, Sept. 21.
Shield for a tubular lamp, Diffusing. R. O'Connell. 151,066, Sept. 21.
Shoe sole or similar article. F. B. Huzzard. 151,043, Sept. 21.
Sled knee. C. W. Sunberg. 151,100, Sept. 21.
Strip for shoe soles, Binding. R. B. Harrison. 151,042, Sept. 21.
Suit, Swimming. J. O. Gantner, Jr. 151,038, Sept. 21.
Table, desk, or similar article. E. Westlake. 151,111, Sept. 21.
Thermometer. B. Blecher. 151,027, Sept. 21.
Toaster. P. Yaeger. 151,113, Sept. 21.
Tray, Cracker. J. W. Verduyn and L. M. Mason. 151,108, Sept. 21.
Tray, Serving. V. Sherry, H. A. and G. F. Plocky. 151,079, Sept. 21.
Tray, Toilet. Z. E. Marvin, Jr. 151,060, Sept. 21.
Vehicle toy. L. A. Wise. 151,112, Sept. 21.
Vending machine, Candy. W. E. Moore. 151,063, Sept. 21.
Vending machine, Cigarette. W. E. Moore. 151,064, Sept. 21.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abdominal support. J. Cidissen. 2,449,641, Sept. 21.
Acid activated montmorillonite catalyst and preparation thereof, Ammoniated. W. W. Gary and R. B. Secor. 2,449,891, Sept. 21.
Actuating apparatus, Longitudinal. R. C. Marholz. 2,449,855, Sept. 21.
Aircraft flare. J. Albin. 2,449,540, Sept. 21.
Aircraft flight stabilizing control unit and system. C. L. Paulus. 2,449,566, Sept. 21.
Air purifier. R. Wilson. 2,449,681, Sept. 21.
Alumina gel from amalgamated aluminum, Manufacturing. L. Heard. 2,449,847, Sept. 21.
Anchor, Blouse. D. J. Hennie. 2,449,896, Sept. 21.
Animating device. U. E. Iwerks. 2,449,702, Sept. 21.
Antenna. A. S. Meier. 2,449,562, Sept. 21.
Antifriction bearing assemblies, Making. G. F. Johnson. 2,449,942, Sept. 21.
Antifriction bearings, Making. G. F. Johnson. 2,449,943, Sept. 21.
Apparatus for coating the inside surfaces of tubular vitreous envelopes. A. H. Laidig and F. T. May. 2,449,783, Sept. 21.
Apparatus for contacting solids and gaseous fluids. E. J. Gohr, H. Z. Martin, and C. W. Tyson. 2,449,601, Sept. 21.
Apparatus for detecting variations in load impedances. W. S. Duttera. 2,449,739, Sept. 21.
Apparatus for forming molds for centrifugal casting and centrifugally casting products. L. L. Johnston. 2,449,900, Sept. 21.
Apparatus for handling rolls of flexible sheet material. A. T. Lewis. 2,449,945, Sept. 21.
Apparatus for lifting massive objects. W. H. Jameson and E. L. Durkee. 2,449,781, Sept. 21.
Apparatus for magnifying the images of television screens. J. S. Dougherty. 2,449,886, Sept. 21.
Apparatus for manufacturing finned tubes. J. W. Brown, Jr. 2,449,840, Sept. 21.
Apparatus for regulating the transfer of heat in fused bath electrolytic cells. R. J. McNitt. 2,449,856, Sept. 21.
Apparatus for relieving stress in welded plates. C. P. Bedford. 2,449,760, Sept. 21.
Apparatus for storing stacked articles. W. J. Gibbs. 2,449,892, Sept. 21.
Apparatus for washing over, releasing, and withdrawing tubular structures from wells. R. M. Claypool and D. M. Best. 2,449,841, Sept. 21.
Artificial hand and arm. H. J. Snethun. 2,449,728, Sept. 21.
Ash receptacle for armrests of vehicle seats. A. B. Bell. 2,449,965, Sept. 21.
Atomizer. J. Checkon. 2,449,927, Sept. 21.
Atomizer, Medicinal. O. O. Wunsch. 2,449,734, Sept. 21.
Automatic control, Pressure responsive. E. V. Rippingille. 2,449,953, Sept. 21.
Automobile jack. A. P. Huhle. 2,449,850, Sept. 21.
Bailer unloading rack. J. J. Santiago. 2,449,721, Sept. 21.
Balancing machine. N. Minorsky. 2,449,563, Sept. 21.
Balsa punch. D. F. Brittle. 2,449,839, Sept. 21.
Bank or jewelry box. C. W. Saathoff. 2,449,722, Sept. 21.
Bar: *See*—
  Vehicle tow bar.
Basket. H. S. Johns. 2,449,899, Sept. 21.
Battery adapter. R. L. Eichberg and H. R. Montague. 2,449,550, Sept. 21.
Battery mount. M. A. Shriro and M. B. Kraus, Jr. 2,449,568, Sept. 21.
Beam apparatus, Electron. R. H. Varian. 2,449,569, Sept. 21.
Bearing: *See*—
  Lubricated bearing. Railway journal bearing.
Bed equipment. E. H. C. Wikmark. 2,449,758, Sept. 21.
Belt unloader, Link. A. Baker. 2,449,543, Sept. 21.
Benzonitrile production from benzene or diphenyl and HCN. J. N. Cosby. 2,449,643, Sept. 21.
Bit and holder therefor, Tool. H. M. Sheridan. 2,449,823, Sept. 21.
Blasting machine, Shot. W. E. Jewell. 2,449,745, Sept. 21.
Blasting plug. J. Q. du Pont and E. R. Jones. 2,449,645, Sept. 21.
Block: *See*—
  Snatch block.
Bobbin winder, Sewing machine. C. S. Best. 2,449,835, Sept. 21.
Bolt or nut, Lock. D. M. Gilman. 2,449,846, Sept. 21.
Bottle warming device. L. Schworm, Jr. 2,449,723, Sept. 21.
Box: *See*—
  Bank or jewelry box.
Brake: *See*—
  Spindle brake.
Brake cylinder mounting. W. H. Baselt. 2,449,636, Sept. 21.
Brassière. J. Glick. 2,449,808, Sept. 21.
Breech block return means for the Browning machine gun. C. E. Balleisen. 2,449,545, Sept. 21.
Brush holder. G. G. Bluemink. 2,449,764, Sept. 21.
Cable connector. W. M. Lawhorne. 2,449,660, Sept. 21.
Cadaver lifter. B. A. Hower. 2,449,898, Sept. 21.
Cargo tie down. J. F. Geiger. 2,449,600, Sept. 21.
Cart and car seat, Foldable. L. L. Pritchard. 2,449,618, Sept. 21.
Cart, Folding golf club. W. Quiring. 2,449,910, Sept. 21.
Casing for removably enclosing indentifying tags. D. K. Sloane. 2,449,727, Sept. 21.
Casting machines. E. C. Krueger. 2,449,854, Sept. 21.
Catalytic synthesis of hydrocarbons. W. E. Hendriksen. 2,449,775, Sept. 21.
Cathode-ray tube. H. H. Lanier and R. E. Mueller. 2,449,558, Sept. 21.
Cathode-ray tube. T. N. Ross. 2,449,752, Sept. 21.
Cathode-ray tube scanning circuit. R. L. Snyder, Jr. 2,449,792, Sept. 21.
Chair: *See*—
  Lounge chair.
Chambers, Geiger-Müller tubes, and the like, Ionization. A. Graves and T. J. Dawes. 2,449,697, Sept. 21.
Change-speed transmission, Automatic. O. H. Banker. 2,449,964, Sept. 21.
Child's folding seat. E. B. Thompson. 2,449,629, Sept. 21.
Chuck. M. H. Arms and L. J. Barnard. 2,449,831, Sept. 21.
Chuck, Collet. R. O. Edel and L. Sutton. 2,449,887, Sept. 21.
Chuck, Lathe. G. V. Rogers. 2,449,751, Sept. 21.
Circuit: *See*—
  Cathode-ray tube scanning circuit. Electronic control circuit. Pulse-actuated circuit.
Circuit breaker, Centrifugal. E. W. Rickmeyer. 2,449,862, Sept. 21.
Circuit for cathode-ray tubes, Sweep. M. E. Byrne. 2,449,549, Sept. 21.
Circuit for triggering stroboscopic devices, Electronic. C. M. Hathaway. 2,449,651, Sept. 21.
Circuit, Interrupting. J. M. Wallace. 2,449,867, Sept. 21.
Clamp: *See*—
  Hose clamp.
Cleaning device, Brush. A. O. Olsen. 2,449,818, Sept. 21.
Clinometer. W. E. Austen. 2,449,870, Sept. 21.
Clip: *See*—
  Hair clip. Rod clip.
Clothes pole and cap therefor. F. J. Hyde. 2,449,778, Sept. 21.
Clutch: *See*—
  Hydraulic clutch.
Clutch and brake mechanism. W. M. Gilman. 2,449,893, Sept. 21.
Coating apparatus for tubular objects. R. L. Keiffer. 2,449,655, Sept. 21.
Coating composition for paper, Water-soluble. L. R. B. Hervey and A. C. Whitaker. 2,449,812, Sept. 21.
Coating of silver on iron or steel, Direct. A. D. Slatkin. 2,449,726, Sept. 21.
Collar construction, Shirt. S. Burton. 2,449,584, Sept. 21.
Collator. J. M. Druliner. 2,449,594, Sept. 21.
Communication, Multiplex radio. E. S. Purington. 2,449,819, Sept. 21.
Comparison of radio frequency circuit losses. W. V. Roberts. 2,449,621, Sept. 21.
Compass, Automatic radio. H. F. Penfold and J. P. Della Corte. 2,449,859, Sept. 21.
Compass, Radio. P. G. Hansel. 2,449,553, Sept. 21.
Composition and process for curing lumber and product. A. Lippman, Jr., R. L. Comstock, and E. B. Benjamin. 2,449,785, Sept. 21.
Compressor. P. H. Davey. 2,449,930, Sept. 21.
Concrete placement machine. C. Jackson. 2,449,851, Sept. 21.
Concrete spreading apparatus. A. E. Miller, G. K. Viall, and R. F. Lindow. 2,449,710, Sept. 21.
Condenser: *See*—
  Electrical condenser. Surface condenser.
Condensers, Manufacturing. E. S. Pridham. 2,449,952, Sept. 21.
Conduit coupling. E. D. Williams. 2,449,920, Sept. 21.

Connector: *See*—
Cable connector. Electrical connector.
Connector. W. F. Watson. 2,449,869, Sept. 21.
Connector for belt. E. Nassimbene. 2,449,950, Sept. 21.
Container: *See*—
Mucilage container.
Control apparatus. H. S. Ackerman. 2,449,538, Sept. 21.
Control syringe. L. B. Stallcup. 2,449,678, Sept. 21.
Control system for high altitude pressure suits, Automatic. H. L. Burns. 2,449,548, Sept. 21.
Controlled humidity refrigerator. M. G. Shoemaker. 2,449,824, Sept. 21.
Conveyer for fruit grading machines, Endless. McS. Lupton. 2,449,611, Sept. 21.
Cooker, Rotary. R. Groetchen. 2,449,937, Sept. 21.
Cooler for viscous liquids. S. K. Andersen. 2,449,922, Sept. 21.
Cooling system for portable motion-picture projectors. O. R. Nemeth. 2,449,713, Sept. 21.
Cornstalk lifting device. L. Hammon. 2,449,603, Sept. 21.
Corrugated disk filter. M. A. Goldman. 2,449,809, Sept. 21.
Coupling: *See*—
Conduit coupling. Pipe coupling.
Irrigation pipe coupling. Shaft coupling.
Overload release flexible coupling. Swivel coupling.
Coupling. F. E. Hansen. 2,449,938, Sept. 21.
Coupling device. W. H. Tandet. 2,449,916, Sept. 21.
Coupling for hose, Quick. R. C. Lane. 2,449,659, Sept. 21.
Coupling means. J. R. Frei. 2,449,807, Sept. 21.
Cover for tire repair vulcanizers and method of making, Flexible. H. T. Kraft. 2,449,606, Sept. 21.
Cracking process, Catalytic. N. P. Peet. 2,449,617, Sept. 21.
Cuff holding device, Sleeve. J. A. Barnes. 2,449,579, Sept. 21.
Cupping device, Automatic. C. Develay and G. M. Galvier. 2,449,805, Sept. 21.
Cutin fitting. W. J. Collison. 2,449,803, Sept. 21.
Deciphering system, Mechanical. A. H. Reiber. 2,449,789, Sept. 21.
Defrosting deflector, Refrigerator. J. V. Mesite. 2,449,709, Sept. 21.
Dehydrator for refrigerating systems. C. C. Brinkoeter. 2,449,688, Sept. 21.
Device for decorating materials. F. S. Guenther. 2,449,810, Sept. 21.
Device for signalling or releasing by electric power capacitors. R. Nordell. 2,449,817, Sept. 21.
Dialkylcyclohexyl glycols and certain derivatives thereof. E. C. Shokal and R. C. Morris. 2,449,956, Sept. 21.
Dicyclohexylammonium nitrite and its preparation. A. Wachter and N. Stillman. 2,449,962, Sept. 21.
Die assembly. J. Stuart, II. 2,449,625, Sept. 21.
Die casting, Heat-treating magnesium-alloy. R. C. Cornell. 2,449,768, Sept. 21.
Differential leakage indicator. H. B. Kirkley. 2,449,556, Sept. 21.
Differential pressure valve. J. D. Akerman and M. Schonberg. 2,449,683, Sept. 21.
Discharge device, Electron. H. L. Steele, Jr. 2,449,794, Sept. 21.
Discharge vessel, Electron. A. Brasch and W. Huber. 2,449,872, Sept. 21.
Disk type rotor for axial pole induction motors. L. E. Aske. 2,449,925, Sept. 21.
Display device, including movable frames, Third dimension animated. M. Strauss. 2,449,825, Sept. 21.
Display device with triangular base, Foldable. L. H. Roth. 2,449,911, Sept. 21.
Distillation of oil shale under fluidized conditions. E. B. Peck. 2,449,615, Sept. 21.
Distributor for air-borne fibers. J. D. Daddario. 2,449,592, Sept. 21.
Dolly, House moving. J. Rapp. 2,449,670, Sept. 21.
Door check and closer. R. C. Van De Boe. 2,449,826, Sept. 21.
Door lock. J. H. Milligan. 2,449,711, Sept. 21.
Door mat. J. Suskind. 2,449,796, Sept. 21.
Door stop. S. S. Brinda. 2,449,686, Sept. 21.
Door stop. S. S. Brinda. 2,449,687, Sept. 21.
Drive control, Compressor. F. W. Edwards. 2,449,888, Sept. 21.
Drive, Electromagnetic. W. A. Kaiser. 2,449,901, Sept. 21.
Dry battery, Multivoltage. D. L. Harford. 2,449,811, Sept. 21.
Drying machine. R. C. Parkes. 2,449,667, Sept. 21.
Earphone receiver, Electromagnetic. W. F. Knauert. 2,449,557, Sept. 21.
Eggshell remover. D. Jauhiainen. 2,449,941, Sept. 21.
Elastomer plasticizing composition composed of coumarone resin and an aromatic hydrocarbon oil. F. W. Corkery. 2,449,929, Sept. 21.
Electrical condenser. C. E. G. Bailey. 2,449,577, Sept. 21.
Electrical connection of separable character. S. Bogen. 2,449,736, Sept. 21.
Electrical connector. R. J. Violette. 2,449,570, Sept. 21.
Electronic control circuit. G. A. Waldie. 2,449,797, Sept. 21.
Elevator, Well pipe. C. A. Lundeen. 2,449,559, Sept. 21.
Equipment for attaching price tags to greeting cards. N. S. Nageotte. 2,449,614, Sept. 21.
Esters of alcohol nontertiary amines. F. J. Cahn. 2,449,926, Sept. 21.
Extraction and isolation of digitoxin. H. Rosen. 2,449,673, Sept. 21.
Extraction of unsaturated hydrocarbons and selective solvent therefor. M. Souders, Jr., and F. A. French. 2,449,793, Sept. 21.
Extractive distillation of butanes and butenes with acetone solvent. J. D. Long. 2,449,610, Sept. 21.
Extrusion press. A. L. Heston. 2,449,652, Sept. 21.
Eyeglass. E. Froelich. 2,449,694, Sept. 21.
Eyepiece adapter. A. G. Moulsdale and J. N. Bruce. 2,449,564, Sept. 21.
Fan, Folding hand. M. Imperial. 2,449,701, Sept. 21.
Fastener for storm windows and the like. R. Redmond. 2,449,750, Sept. 21.
Fatigue indicator. A. V. de Forest. 2,449,883, Sept. 21.
Feeder: *See*—
Welding rod feeder.
Feeding device for shaker conveyers. W. W. Sloane. 2,449,623, Sept. 21.
Feeding mechanism for shaker conveyers. J. H. Holstein. 2,449,777, Sept. 21.
Filament forming apparatus. E. B. Isaac and F. J. Rippl. 2,449,653, Sept. 21.
Film guide, Tourist. J. M. Higgins. 2,449,699, Sept. 21.
Filter: *See*—
Corrugated disk filter.
Filtering device for coffee makers. L. Reichold. 2,449,620, Sept. 21.
Filtration. W. Kiersted, Jr. 2,449,902, Sept. 21.
Fireguard for motion-picture projectors, Automatic. J. F. Reney. 2,449,716, Sept. 21.
Fish lure. I. R. Hubbard. 2,449,700, Sept. 21.
Fitting for connecting pipes by welding. O. Seitz. 2,449,754, Sept. 21.
Flare and the like, Water-borne. C. D., A. J., and C. Schermuly. 2,449,913, Sept. 21.
Fluid mixtures, Producing uniform. C. A. Brown. 2,449,766, Sept. 21.
Fluid pressure operated brake and the like. H. J. Butler 2,449,802, Sept. 21.
Foam in steam generators, Minimizing the production of. R. W. Kell. 2,449,656, Sept. 21.
Foot wrapper. F. K. Glasgow. 2,449,936, Sept. 21.
Form for molding concrete walls. F. S. Slater. 2,449,725, Sept. 21.
Frame: *See*—
Picture frame.
Fumigating package. A. L. Galloway. 2,449,695, Sept. 21.
Fuse, Renewable. F. G. von Hoorn. 2,449,827, Sept. 21.
Garment conveyer. A. J. Pohlers. 2,449,669, Sept. 21.
Gas operation of firearms action slides. S. W. Marshall, Jr. 2,449,560, Sept. 21.
Gauge: *See*—
Work gauge.
Gear drive for printing and other machines. K. W. Jones. 2,449,852, Sept. 21.
Getter. G. H. Lockwood and D. F. Way. 2,449,786, Sept. 21.
Glow discharge switch. D. J. H. Admiraal. 2,449,632, Sept. 21.
Glycinamides, Substituted. W. F. Bruce and J. Seifter. 2,449,638, Sept. 21.
Goal, Hockey. L. B. Lindsay. 2,449,708, Sept. 21.
Grease composition, Lubricating. A. Beerbower and J. C. Zimmer. 2,449,580, Sept. 21.
Grid for ice trays. R. L. Halliock. 2,449,743, Sept. 21.
Grip mechanism for testing machines. R. I. Sanderson and E. R. Trostle. 2,449,955, Sept. 21.
Growth poisoning sewer joint. R. F. Therrien. 2,449,731, Sept. 21.
Gummed units, Running direct process. H. L. Dempsey. 2,449,770, Sept. 21.
Hair clip. F. C. Ghisletta. 2,449,845, Sept. 21.
Halide emulsions, Photographic silver. E. K. Blake. 2,449,836, Sept. 21.
Hammer, Drop. R. P. Fitzgerald. 2,449,647, Sept. 21.
Hanger: *See*—
Suit hanger.
Harness for chairs, Baby. G. M. Fitzpatrick. 2,449,741, Sept. 21.
Headwear. N. J. and E. Albert. 2,449,633, Sept. 21.
Heat exchanging apparatus. L. B. Schibbye. 2,449,822 Sept. 21.
Heat polymerizable N-vinyl pyrrole compositions, Stabilized. W. O. Ney. 2,449,951, Sept. 21.
Heating and ventilating unit, Electric. R. H. Taylor. 2,449,755, Sept. 21.
Heating element support. H. A. Mulvany. 2,449,712, Sept. 21.
Heel, Detachable. H. Simonetti. 2,449,914, Sept. 21.
Holder: *See*—
Brush holder. Window blind and curtain rod holder.
Nozzle holder.
Holder attachment, Toilet paper. A. Foltis. 2,449,598, Sept. 21.

Holder for intravenous apparatus. A. J. Daniels. 2,449,882, Sept. 21.
Hose clamp. E. L. Weber. 2,449,798, Sept. 21.
Hydraulic clutch. C. A. Robertson. 2,449,717, Sept. 21.
Hydrogen, Production of. F. T. Barr. 2,449,635, Sept. 21.
Hydroxyethyl-2,5-dichlorobenzene, Preparation of. T. S. Carswell and R. F. Hayes. 2,449,877, Sept. 21.
Ice making machine, Slush. W. H. Taylor. 2,449,730, Sept. 21.
Incandescent lamp and manufacture. A. Greiner. 2,449,650, Sept. 21.
Incandescent lamps, Manufacturing electric. A. W. Seitz. 2,449,676, Sept. 21.
Inclination indicating device. F. H. Schmidt. 2,449,674, Sept. 21.
Inclinometer. P. Jones. 2,449,704, Sept. 21.
Index signal means, Visible. C. E. Attwood. 2,449,576, Sept. 21.
Indicator: *See*—
Differential leakage indicator. Fatigue indicator.
Indicator attachment for planters. H. F. Stalder. 2,449,915, Sept. 21.
Industrial or power gases, Production of. M. Steinschlaeger. 2,449,729, Sept. 21.
Inhaler. G. Karp. 2,449,853, Sept. 21.
Ink reservoir for marking machines. D. F. Putnam and C. H. Cheeseman. 2,449,909, Sept. 21.
Interfolding. N. Marcalus. 2,449,663, Sept. 21.
Irrigation pipe coupling. C. Wyss. 2,449,735, Sept. 21.
Jack: *See*—
Automobile jack.
Jig, Cutter bit grinding. H. Smiley, Jr. 2,449,957, Sept. 21.
Joint: *See*—
Growth poisoning sewer joint.
Journal bearing sleeve. S. R. Leeson. 2,449,662, Sept. 21.
Keeper for door fasteners, Retractable. S. B. Haseltine. 2,449,774, Sept. 21.
Kinetograph movement. H. N. Fairbanks. 2,449,693, Sept. 21.
Knee-lock for artificial legs. G. A. Hinkle and A. T. Weger. 2,449,897, Sept. 21.
Knob, Cushioned. S. K. Wilhelm. 2,449,575, Sept. 21.
Ladder foot. O. A. Linder and E. J. Klause. 2,449,609, Sept. 21.
Lamp: *See*—
Multiple circuit stand lamp.
Latch for work holding vise, Snap-action. H. G. Luft. 2,449,748, Sept. 21.
Lathe, Copying. G. Clausing and C. B. Gary. 2,449,878, Sept. 21.
Leveling device for gyroscopic rotors, Magnetic. W. Leathers and G. S. Di Monico. 2,449,661, Sept. 21.
Lifter: *See*—
Cadaver lifter.
Lifting appliance, Load. W. A. Ross. 2,449,863, Sept. 21.
Light source. J. L. Cox. 2,449,880, Sept. 21.
Linear polymers and copolymers of branch-chain hexadienes, Hydrogenated. R. C. Morris and J. L. Van Winkle. 2,449,949, Sept. 21.
Liner for engine cylinders. C. H. Dolan, II. 2,449,771, Sept. 21.
Loading ramp, Portable. C. G. Agren. 2,449,829, Sept. 21.
Locating device for producing stereoscopic images, Radio object. W. A. Ayres and E. C. Streeter, Jr. 2,449,542, Sept. 21.
Lock: *See*—
Door lock. Vacuum tube lock.
Lock and bracket, Cord. F. J. Burns. 2,449,583, Sept. 21.
Locking means for flexible chutes. R. E. Holmes. 2,449,849, Sept. 21.
Lounge chair. F. Kramer. 2,449,747, Sept. 21.
Lowering device for use as a fire escape, Safety. A. Lawson. 2,449,813, Sept. 21.
Lubricant. P. H. Carnell. 2,449,689, Sept. 21.
Lubricated bearing. D. F. Wilcock. 2,449,574, Sept. 21.
Lubricating oil addition agent. G. D. Byrkit. 2,449,547, Sept. 21.
Lubricator distributor. J. J. Hennessy. 2,449,894, Sept. 21.
Machine for forming and applying clips to wire members. E. Tanguay, C. Kertesz, and W. Krakauer. 2,449,865, Sept. 21.
Machine for operating on shoes. G. Clarke. 2,449,589, Sept. 21.
Machine for the automatic cooling and heating of baby bottles and food. J. M. Bruning. 2,449,874, Sept. 21.
Magazine type camera. R. A. Suthann. 2,449,626, Sept. 21.
Manufacture of amidines. W. F. Short and M. W. Partridge. 2,449,724, Sept. 21.
Mask for color film, Integral. W. T. Hanson, Jr. 2,449,966, Sept. 21.
Mechanism for converting rotary motion into approximately hypocycloidal motion. F. A. Snell. 2,449,958, Sept. 21.
Mechanism for feeding sheets of stiff fibrous material. F. H. Chapman. 2,449,690, Sept. 21.
Metal, Surface treatment of. J. A. Tansley. 2,449,917, Sept. 21.
Method and apparatus for doffing spinning frames and the like. G. A. R. Foster and J. Gregory. 2,449,742, Sept. 21.
Method and apparatus for manufacturing fluorescent lamps. H. D. Blake and W. J. Winninghoff. 2,449,637, Sept. 21.
Method and means for demagnetizing. E. J. Martin and W. T. Sproull. 2,449,946, Sept. 21.
Method and means for protecting shore and other structures against damage by ice. C. N. Ward. 2,449,963, Sept. 21.
Method of and apparatus for making brushes. R. O. Peterson. 2,449,668, Sept. 21.
Method of and apparatus for manufacturing flash lamps. J. Flaws, Jr. 2,449,648, Sept. 21.
Milk can drying rack. E. P. Swintosky. 2,449,628, Sept. 21.
Mineral oil composition. J. J. Giammaria. 2,449,934, Sept. 21.
Mold for forming cementitious blocks. C. B. Voege. 2,449,732, Sept. 21.
Mold for forming concrete walls in situ. R. W. Rumble. 2,449,912, Sept. 21.
Molding, Edge. E. C. Lorraine. 2,449,904, Sept. 21.
Mounting: *See*—
Brake cylinder mounting.
Mounting and operating mechanism, Window sash. R. E. Bemis. 2,449,761, Sept. 21.
Mounting structure for windows. R. Cadwallader. 2,449,875, Sept. 21.
Mucilage container. F. G. Blackman. 2,449,763, Sept. 21.
Multiple circuit stand lamp. P. L. Brattain. 2,449,765, Sept. 21.
N,N dibutyl phenethylamine, Production of. J. D. Danforth. 2,449,644, Sept. 21.
Nail driving attachment for pneumatic hammers. C. D. Raybourn. 2,449,860, Sept. 21.
Necktie securing device. H. R. Birdsell. 2,449,539, Sept. 21.
Nitration product of a hydroxy amide. W. F. Filbert. 2,449,843, Sept. 21.
Nitroalcohol esters of acrylic acid and interpolymers produced from the same. G. F. D'Alelio and J. W. Underwood. 2,449,804, Sept. 21.
Nozzle control, Sand blast. W. A. Rich. 2,449,672, Sept. 21.
Nozzle, Discharge. A. P. Arno. 2,449,541, Sept. 21.
Nozzle holder. E. C. Rumsey. 2,449,719, Sept. 21.
Objective having a simple divergent component air spaced between two compound convergent components, Modified optical. A. Cox. 2,449,769, Sept. 21.
Oil composition. J. C. Zimmer and R. Rosen. 2,449,631, Sept. 21.
Oil emulsion treater. G. E. Dake and J. A. Lyne. 2,449,738, Sept. 21.
Oil prospecting method. W. J. Sweeney. 2,449,627, Sept. 21.
Oil temperature regulator. W. H. Geddes and P. W. Schanke. 2,449,696, Sept. 21.
Organo-di-siloxanes and making them. J. F. Hyde. 2,449,940, Sept. 21.
Organo-silicon compounds, Preparing. J. E. Sellers and J. L. Davis. 2,449,821, Sept. 21.
Oscillator plates, Quartz. C. Frondel. 2,449,844, Sept. 21.
Oscillograph apparatus. F. J. Bias and H. W. Lord. 2,449,801, Sept. 21.
Overload release flexible coupling. W. B. Hopkins and T. T. Oberg. 2,449,555, Sept. 21.
Oxidation of heterocyclic aromatic nitrogen compounds. M. B. Mueller. 2,449,906, Sept. 21.
Packing means, Protective. K. W. Couse. 2,449,591, Sept. 21.
Pen, Fountain. L. F. Perwas. 2,449,567, Sept. 21.
Phosphorus- and sulfur-containing organic reaction products, Making. J. J. Giammaria. 2,449,933, Sept. 21.
Pick for stringed instruments. R. C. Garlick. 2,449,890, Sept. 21.
Picture frame. N. E. Olin. 2,449,907, Sept. 21.
Pipe coupling. A. La Riccia and T. W. Plante. 2,449,607, Sept. 21.
Pipe coupling. C. K. Stillwagon. 2,449,795, Sept. 21.
Pipe extension, Tail. H. L. Trautmann. 2,449,756, Sept. 21.
Pipe union, Adjustable. F. R. Clafford. 2,449,588, Sept. 21.
Piston. F. F. Kishline. 2,449,657, Sept. 21.
Plastic compositions and making the same. F. E. Calvert and P. A. Bury. 2,449,876, Sept. 21.
Plastic material from allyl starch. P. L. Nichols, Jr., and R. M. Hamilton. 2,449,816, Sept. 21.
Plastic material, Reinforced. W. D. Ellis, III. 2,449,595, Sept. 21.
Plate for jaw crushers, Wear. R. P. Kinkel. 2,449,746, Sept. 21.
Plug: *See*—
Blasting plug.
Pole butt. L. Hartley. 2,449,698, Sept. 21.
Polylactylic acid resins and making them. P. D. Watson. 2,449,828, Sept. 21.
Polysiloxane resins. C. E. Welsh. 2,449,572, Sept. 21.

Polyvinyl chloride/polystyrene dispersions, Aqueous. R. G. R. Bacon, H. Taylor, and L. Wood. 2,449,684 Sept. 21.
Posture demonstrating device. A. B. Puddicombe. 2,449,715, Sept. 21.
Power plant with differential speed motor, Hydropneumatic accumulator type. C. L. Helber and F. B. Gross. 2,449,554, Sept. 21.
Power transmitting mechanism. L. R. Buckendale and B. W. Keese. 2,449,546, Sept. 21.
Power unit. D. L. Lotts, R. T. Bucy, and H. E. Waldron. 2,449,905, Sept. 21.
Preservation of cellulosic materials. F. J. Meyer. 2,449,787, Sept. 21.
Press: *See*—
Extrusion press.
Press motor and control valve therefor, Fluid. C. Eisen. 2,449,889, Sept. 21.
Press system with control means yielding high-speed operation thereof, Hydraulic. E. Cannon. 2,449,639, Sept. 21.
Pressure unloader for compressors. J. Felser, Jr. 2,449,740, Sept. 21.
Projector of the continuously moving film type, Sound picture magazine. R. Jones. 2,449,705, Sept. 21.
Protective device, Electrical. H. R. Treece and R. A. Wilkinson. 2,449,961, Sept. 21.
Pulse-actuated circuit. J. R. Hefele. 2,449,848, Sept. 21.
Pump: *See*—
Sand pump.
Pump. H. S. Bancroft. 2,449,832, Sept. 21.
Pumping apparatus, Sludge. S. H. Ericson. 2,449,596, Sept. 21.
Pumping structure, Hermetically sealed submersible. F. C. Gilman. 2,449,772, Sept. 21.
Pyrethrum extract and propellant solution containing It. W. W. Rhodes. 2,449,671, Sept. 21.
Quantitative determination of unsaturated aldehydes. J. E. Bludworth, M. O. Robeson, and H. A. Truby, Jr. 2,449,581, Sept. 21.
Quick-acting valve. J. O. Jackson. 2,449,604, Sept. 21.
Rack: *See*—
Bailer unloading rack. Milk can drying rack.
Radio system. J. C. Noble and B. F. Hardt. 2,449,565, Sept. 21.
Railway frog, Transversely sliding. A. L. Vissat. 2,449,757, Sept. 21.
Railway journal bearing. J. J. Hennessy. 2,449,895, Sept. 21.
Reactions of inorganic polyisocyanates and polyisothiocyanates. H. C. Miller and B. C. Pratt. 2,449,613, Sept. 21.
Receiver or amplifier arranged to be fed from direct current mains, Radio. J. A. J. Bouman. 2,449,685, Sept. 21.
Recovery of acidic gases. A. W. Hixson and R. Miller. 2,449,537, Sept. 21.
Refrigeration control apparatus. E. H. Ayers. 2,449,800, Sept. 21.
Regulator: *See*—
Oil temperature regulator.
Resolution of azeotropic mixtures of chlorosilanes. A. E. Newkirk. 2,449,815, Sept. 21.
Reweaving machine. M. T. Deal. 2,449,691, Sept. 21.
Ring machine, Venturi. B. C. Crandall. 2,449,881, Sept. 21.
Rod clip. R. M. Albert. 2,449,830, Sept. 21.
Roller bearings and lock rings therefor, Assembling. G. F. Johnson. 2,449,944, Sept. 21.
Rotor for axial pole induction motors. L. E. Aske. 2,449,924, Sept. 21.
Rubber plasticized with a composition composed essentially of an aromatic hydrocarbon oil, Synthetic. F. W. Corkery. 2,449,928, Sept. 21.
Safety control system, Burner. J. Ottmar. 2,449,858, Sept. 21.
Safety device for fluid supply lines. W. S. White. 2,449,573, Sept. 21.
Safety device for motorists. K. B. Liman. 2,449,784, Sept. 21.
Sand pump. J. J. Santiago. 2,449,720, Sept. 21.
Sash hardware. H. W. Valentine. 2,449,918, Sept. 21.
Saw set. J. W. Melanson. 2,449,814, Sept. 21.
Scaling device, Fish. J. F. Sawyer. 2,449,753, Sept. 21.
Seal breaker for coffee makers. L. Reichold. 2,449,619, Sept. 21.
Seal, Electrical. H. O. Barschdorf. 2,449,759, Sept. 21.
Seat: *See*—
Child's folding seat.
Sectional dining table. R. Langstaff. 2,449,903, Sept. 21.
Seismic locating faults. A. Wolf. 2,449,921, Sept. 21.
Separator. J. F. Sebald. 2,449,790, Sept. 21.
Shaft coupling. R. E. E. Jessop. 2,449,654, Sept. 21.
Shear. F. L. and C. E. McGary. 2,449,561, Sept. 21.
Sheet shackles, Jib. F. H. Drake. 2,449,593, Sept. 21.
Shoe tree. W. M. Renner. 2,449,861, Sept. 21.
Silencer for firearms. B. Walker. 2,449,571, Sept. 21.
Skate, Foot propelled. F. M. Bohler. 2,449,871, Sept. 21.
Slicing, cutting, and core-removing machine. E. W. Bridge. 2,449,737, Sept. 21.
Slide rule. I. S. Roberts. 2,449,954, Sept. 21.
Snatch block. C. B. Johnson. 2,449,703, Sept. 21.
Snatch block. C. H. Rue. 2,449,718, Sept. 21.
Solutions of riboflavin. J. Charney. 2,449,640, Sept. 21.
Spark gap. J. E. Gorham and H. A. Zahl. 2,449,552, Sept. 21.
Spark gap. F. L. Jones. 2,449,967, Sept. 21.
Speed control for dynamoelectric apparatus. R. L. Jaeschke. 2,449,779, Sept. 21.
Speedometer, Boat. R. C. Colpaert. 2,449,590, Sept. 21.
Spheroidal silica-alumina gel particles, Preparation of. M. M. Marisic, 2,449,664, Sept. 21.
Spindle brake. R. Hargreaves and A. O. Roy. 2,449,773, Sept. 21.
Spinner control mechanism. J. C. Van Riper. 2,449,630, Sept. 21.
Spinner device, Chance. J. H. Biehl. 2,449,762, Sept. 21.
Splitter and planer head, Rotary cylindrical. G. P. Kelton. 2,449,605, Sept. 21.
Spoon leader. B. E. Eichendorff. 2,449,692, Sept. 21.
Stage regeneration of spent catalysts, Multiple. B. E. Roethell. 2,449,622, Sept. 21.
Steel, Cold hobbable. M. C. Fetzer and W. H. Kemper. 2,449,806, Sept. 21.
Stirrer for cooking vessels. L. L. Barr. 2,449,578, Sept. 21.
Stoker tuyère. F. B. Hall. 2,449,602, Sept. 21.
Spotlight, Bicycle. C. C. Knitter. 2,449,782, Sept. 21.
Strainer for puréeing food, Culinary. N. Moseley. 2,449,666, Sept. 21.
Strap. C. A. Domler. 2,449,884, Sept. 21.
Strap with inseparable ends. C. A. Domler. 2,449,885, Sept. 21.
Stratifier, Pulsating pneumatic. J. A. Brusset. 2,449,582, Sept. 21.
Streptomycin and preparation. S. A. Waksman and A. Schatz. 2,449,866, Sept. 21.
Stretcher with skeletal traction facilities. C. C. Carpenter. 2,449,767, Sept. 21.
Strip assembly method and apparatus, Unit. A. L. Hess. 2,449,776, Sept. 21.
Stripper, Ballast. D. M. Praytor and K. Kershaw. 2,449,714, Sept. 21.
Suit hanger. R. Waldman. 2,449,868, Sept. 21.
Suit type of apparel, Sun. G. Brockman. 2,449,873, Sept. 21.
Support: *See*—
Abdominal support. Heating element support.
Support and connection, Lamp filament. I. H. Van Horn. 2,449,679, Sept. 21.
Suppression of corrosion in ferrous alloy vessels in the treatment of hydrocarbons. E. Q. Camp. 2,449,585, Sept. 21.
Surface condenser. S. Pennella. 2,449,616, Sept. 21.
Switch: *See*—
Glow discharge switch.
Switch arrangement. O. J. Alvarez and E. Osman. 2,449,799, Sept. 21.
Swivel coupling. P. M. Hardwick. 2,449,744, Sept. 21.
Synthetic rubberlike materials. W. C. Mast, C. E. Rehberg, and C. H. Fisher. 2,449,612, Sept. 21.
Synthetic rubber reclaimed with a reclaiming oil composed of solvent naptha and an aromatic hydrocarbon oil. F. W. Corkery. 2,449,879, Sept. 21.
Syringe, Hypodermic. A. E. Smith. 2,449,968, Sept. 21.
Table: *See*—
Sectional dining table.
Tank mechanism, Flush. J. S. Milne. 2,449,948, Sept. 21.
Telescope mount. J. C. Garand. 2,449,551, Sept. 21.
Thawing materials. J. W. Forsythe and E. J. Smotzer. 2,449,932, Sept. 21.
3-Methylsulfonamido-4-amino dimethyl aniline photographic developer. A. Weissberger. 2,449,919, Sept. 21.
Throttle, Air controlled. J. B. Fulton. 2,449,599, Sept. 21.
Tie device for wall forms. A. H. Symons. 2,449,864, Sept. 21.
Timing modulation system. E. I. Anderson. 2,449,923, Sept. 21.
Tire carrier attachment for trucks, Spare. D. R. Ballard. 2,449,544, Sept. 21.
Tire removing device, Lever operated axially shifting. L. A. Toles. 2,449,960, Sept. 21.
Tobacco stick. D. M. and S. C. Boone. 2,449,837, Sept. 21.
Toy football dummy. M. J. Gilman. 2,449,935, Sept. 21.
Trailer and tractor lifting unit, Heavy duty. R. L. Meadows. 2,449,947, Sept. 21.
Transmission and control therefor. H. E. Carnagua. 2,449,586, Sept. 21.
Transmission and control therefor. B. B. Le May, Jr. 2,449,608, Sept. 21.
Tray, Drying. P. La Macchia. 2,449,658, Sept. 21.
Tripping and interlocking device for circuit breakers. J. W. Seaman. 2,449,820, Sept. 21.
Trough, Boiler detention. J. F. Spaht. 2,449,624, Sept. 21.
Tube: *See*—
Cathode-ray tube.
Turbine. J. Dematteis. 2,449,931, Sept. 21.

2-amino-4-methyl pyrimidine, Preparation of. C. Prevost. 2,449,908, Sept. 21.
Uncoupling mechanism. W. J. Metzger. 2,449,665, Sept. 21.
Undergarment, Combination. E. G. Neuhoff and B. F. Davenport. 2,449,857, Sept. 21.
Vacuum tube lock. K. Emde. 2,449,646, Sept. 21.
Valve: *See*—
Differential pressure valve. Quick-acting valve.
Valve. J. L. Barnes. 2,449,833, Sept. 21.
Valve actuating mechanism. H. C. Wilkening. 2,449,733, Sept. 21.
Valve suitable for use with cathode-ray tubes and for other purposes. G. N. Brett and E. A. Smith. 2,449,838, Sept. 21.
Vehicle tow bar. P. T. Wak, Jr. and A. J. Carpenter. 2,449,680, Sept. 21.
Vertical heating and circulating tube still. J. M. Chambers. 2,449,587, Sept. 21.
Vinylidene chloride resin plasticized with a di-ester of endomethylene tetra-hydrophthalic acid. H. P. Staudinger, D. Faulkner, and G. T. Wright. 2,449,959, Sept. 21.
Washer and tester, Well. W. H. Coons. 2,449,642, Sept. 21.
Washing machine, Automatic. H. Baade. 2,449,634, Sept. 21.
Water processing apparatus, Galvanic. T. C. Jones. 2,449,706, Sept. 21.
Welding mechanism. C. F. Leathers. 2,449,707, Sept. 21.
Welding rod feeder. P. H. Setzler. 2,449,677, Sept. 21.
Welding transformer. J. D. Forney. 2,449,649, Sept. 21.
Wheel assembly, Fifth. R. W. Pointer. 2,449,749, Sept. 21.
Winder. B. A. Peterson. 2,449,788, Sept. 21.
Winder, Yarn. A. E. Winslow. 2,449,682, Sept. 21.
Window blind and curtain rod holder. R. R. Ferrenberg. 2,449,597, Sept. 21.
Wing raising device for floating dry docks. W. H. Jameson and E. L. Durkee. 2,449,780, Sept. 21.
Wire covering machine, method, and product. C. W. Bechle and J. W. Olson. 2,449,834, Sept. 21.
Work gauge. E. S. Cornell. 2,449,842, Sept. 21.
Work holder for lapping lathes. H. H. Silverman. 2,449,791, Sept. 21.
Wrapper, Blanket. L. V. Schowalter. 2,449,675, Sept. 21.
Writing instrument. F. Heyberger. 2,449,939, Sept. 21.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 21, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

U. S. GOVERNMENT PRINTING OFFICE: 1948

NOTICES

One Year Right of Priority under R. S. 4887

The second paragraph of R. S. 4887 (35 U. S. C. 32) provides for the right of priority in the case of an application for patent filed in the United States based upon an application previously filed (within one year) in "a foreign country, which, by treaty, convention, or *law*, affords similar privileges to citizens of the United States."

Such similar privileges are accorded to citizens of the United States by the Republic of the Philippines, by virtue of a similar provision in the patent law of the Philippines, and the provisions of the second paragraph of R. S. 4887 are considered applicable in the case of applications for patent in the United States based upon applications previously filed in the Philippines and otherwise complying with R. S. 4887.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

August 31, 1948.

Examination

In accordance with the provisions of Rule 17 of the Rules of Practice, an examination for the registration of attorneys and agents to practice before the United States Patent Office will be held on Monday, November 15, 1948.

This examination will be given under the direction of the Civil Service Commission, and may be taken in any of the cities of the country in which the Civil Service Commission regularly conducts examinations. Applications to take the examination must be directed to the Commissioner of Patents and filed in the Patent Office not later than October 20, 1948.

Application blanks may be obtained from the Clerk of the Committee on Enrollment, Room 1859, Department of Commerce Building.

THOMAS F. MURPHY,
Chairman, Committee on Enrollment.

August 16, 1948.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,398,775, H. L. Beekley, R. H. Gilbert, and R. H. Lacart, Valve, decided June 21, 1948, claims 1, 2, and 3.

Pat. 2,368,298, L. B. Harris, Aircraft structure, decided July 7, 1948, claims 1, 2, and 5.

Public Laws 690 and 220

The following two countries are added to the list of countries with respect to which reciprocity under Public Laws 690 and 220 is recognized (see 613 O. G. 253 for tabulation), with February 29, 1948, as the latest date of the extension of time for filing applications with extended right of priority, or taking other action:

Australia
Philippines

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

August 31, 1948.

Public Laws 690 and 220, Poland

In the notice published in the OFFICIAL GAZETTE for August 10, 1948, 613 O. G. 253, giving the list of countries with respect to which reciprocity under Public Laws 690 and 220 has been recognized, footnote 4 opposite Poland is canceled. The extension of time for filing applications with extended right of priority or taking other action is February 29, 1948, without the qualification indicated in the canceled footnote.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

September 2, 1948.

Adjudicated Patents

(C. C. A. Calif.) Barili patent, No. 1,844,142, for a stuffed pastry machine, claim 4 *Held* valid and infringed. *Bianchi* v. *Barili*, 168 F.2d 793; 78 USPQ 5.

(D. C. N. J.) Germer patent, No. 2,202,199, for a discharge device, claims 2 to 10, 12, 13, 15 to 19, and 21 to 24 *Held* not infringed. *Westinghouse Electric Corp.* v. *Hanovia Chemical and Manufacturing Co.*, 78 F. Supp. 403; 78 USPQ 35.

(D. C. Ohio) Braswell patent, No. 2,238,306, for a curb feeler for automobiles, *Held* valid and infringed. *Braswell* v. *Joseph Shaw Co.*, 78 F. Supp. 363; 78 USPQ 139.

(D. C. Mich.) Turnham patent, No. 2,242,408, for merchandise handler, claims 4 to 6 *Held* valid and infringed. *Bradley* v. *Great Atlantic & Pacific Tea Co.*, 78 F. Supp. 388; 77 USPQ 343.

(D. C. N. J.) Schoeninger patent, No. 2,324,241, for a basket weave bracelet, *Held* valid but not infringed. *Forstner Chain Corp.* v. *Margrove Mfg. Co.*, 78 F. Supp. 351; 78 USPQ 40.

(C. C. A. N. C.) Mayo reissue patent, No. 22,221, for air-conditioned tobacco barn, *Held* valid and infringed. *Florence-Mayo Nuway Co* v. *Hardy*, 168 F.2d 778; 77 USPQ 439.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,443,152. LAWN MOWER SHARPENER. Patented June 8, 1948. A holder clamping a steel file is guided by tie rod of lawn mower frame for sharpening blades of cutting wheel. Holder comprises a flat body member having an outwardly tapered end with raised V-shaped guiding edges and a curved loop-like portion at other end, with an inverted V-shaped bight and a terminal abutment extension. The bight provides a seat for tie rod of mower. The file is placed against inner face of body with handle tine of file passed through an opening in the loop-like end. A clamping loop holds file in position and guides it to move longitudinally of blade. Position of holder may be adjusted to sharpen the stationary blade. (Owner) Francis Marion Slack, 3631 Crestline Road, Fort Worth 7, Tex. Group 35—22. Reg. No. 9,936.

Pat. 2,442,994. BOAT TRAILER. Patented June 8, 1948. A trailer for attachment to an automotive vehicle for lifting, transporting, and launching a canoe or outboard-motor boat. Welded tubing forms a boat-shape frame to which supporting wheels are cantilevered by use of depending arms and leaf spring. Conventional winch and cable arrangement raises or lowers boat by means of hoist hooks at prow and stern, and straps are placed beneath hull. Straps, which are of resilient metal lined to prevent scratching, are adjusted by frictional clamps to support boat against suitable stops on frame. A mounting bracket is provided for an outboard motor. (Owner) George Herman Clary, 816 5th St. South, Belle Fourche, S. Dak. Groups 37—32; 38—41. Reg. No. 9,937.

The following five patents are owned by the American Cyanamid Company. Inquiries concerning licenses to practice the processes should be addressed to American Cyanamid Company, 30 Rockefeller Plaza, New York 20, N. Y.

Pat. 2,291,079. PAPER HAVING HIGH WET STRENGTH AND PROCESS OF PRODUCING THE SAME. Patented July 28, 1942. Group 26—11—39. Reg. No. 9,938.

Pat. 2,291,080. METHOD OF PRODUCING PAPER HAVING HIGH WET STRENGTH AND PRODUCT THEREOF. Patented July 28, 1942. Group 26—11—39. Reg. No. 9,939.

These two related patents describe a process for treating paper in various ways. Paper so treated may be used as a filter paper (for commercial filter presses), as a packaging for corrosive materials, as stock paper for laminating, as a wrapping paper for meat, for paper towels, toilet tissues, etc. Generally, paper is impregnated with a 0.5%—5% aqueous solution (based on the weight of the dry paper) of the condensation products of either melamine-formaldehyde (Pat. 2,291,079) or aminotriazine-aldehyde (Pat. 2,291,080).

Pat. 2,345,543. CATIONIC MELAMINE-FORMALDEHYDE RESIN SOLUTION. Patented Mar. 28, 1944. This patent provides a ready method of obtaining controlled deposition of extremely thin resin films on negatively charged materials such as cellulosic fibers, or on metallic surfaces, etc. Aqueous solutions of the acid-type melamine-formaldehyde condensation products undergo a progressive polymerization which gradually increases the size of the resin particles until the colloidal range is reached. In this colloidal range, the resin carries a definite positive electric charge which may be controlled. The process has many uses. For example, a great improvement in the wet strength of paper is obtained by adding a positive-charge colloidal solution to a well-beaten paper stock before it is formed into finished sheets. Group 26—11—39. Reg. No. 9,940.

Pat. 2,394,273. DEFIBERING OF WET STRENGTH PAPER. Patented Feb. 5, 1946. This process provides an effective method of defibering and recovering strength-improved paper impregnated with an acid-curing resin. Paper trimmings, etc., ordinarily discarded as waste are first soaked in an alum solution for about half an hour and then heated to 100–200° F. The heat treatment may take half an hour or more depending upon the amount of resin in the paper or the alum used. After the heat treatment, the paper is mechanically disintegrated. Recovered stock may be mixed with fresh pulp or used for any other purpose. Group 26—11—39. Reg. No. 9,941.

Pat. 2,423,097. BEATER FOR DISINTEGRATING PAPER CONTAINING RESIN. Patented July 1, 1947. Conventional beater is constructed to allow the introduction of superheated jets of steam at high pressure at several points within the beater tub. By the creation of increased circulation and turbulence, the steam functions to burst and cook the stock, clear the back fall, and prevent the formation and matting of films which ordinarily tend to clog the beater and stop circulation. Special stocks which could not previously be inexpensively treated in conventional beaters may be thoroughly separated and prepared in a relatively short time. The apparatus also permits the production of a superior paper in that the beater roll is held high off the beater plate to prevent damage to the fibers. Applicable to sulphate and sulphite pulps; rag, cotton linter, and flax pulps; etc. Group 35—54. Reg. No. 9,942.

Pat. 2,443,999. STARTING DEVICE, COMPRESSION RELIEF WITH AUTOMATIC LOCK RELEASE. Patented June 22, 1948. This device enables a pilot to open the exhaust valves of a compression type of internal combustion engine and hold them open while the engine is turned over by the starter, to permit excessive oil in the combustion chambers to be exhausted before starting the engine. Vertically swinging cams for opening the valves may be either hydraulically or manually actuated. The conventional valve rocker which opens an exhaust valve during normal operation of the engine is actuated by the cam, engaging a roller on its inner end. One end of a release lever is connected to a fixed crank on a stub shaft carrying each cam. The other end of the lever is connected by a bell-crank lever to a connecting rod. The connecting rod is operatively connected to hydraulic mechanism. The outer end of the release lever is also connected to a pull cord to permit manual operation in case of failure of the hydraulic mechanism. (Owner) James F. Wright, 4 Mountain Place, Upper Montclair, N. J. Group 37—21—22. Reg. No. 9,943.

Pat. 2,411,430. DIAPER CONTAINER. Patented Nov. 19, 1946. Outside ornamental container with conventional hinged cover operated by foot pedal has supported within it a secondary open-top container for diapers. An auxiliary cover plate is slipped into raised channels secured in U-shape on undersurface of primary hinged cover to fit over open top of secondary container when cover is lowered. Cover plate is enclosed in odor-absorbent material fastened by elastic tapes for easy removal for washing. (Owner) H. C. Hodson, Hodson Chemical Company, Plainfield Ind. Groups 25—52; 33—73; 34—95; 39—81. Reg. No. 9,944.

Pat. 2,442,572. TIMING DEVICE. Patented June 1, 1948. An adjustable timing device for mechanical and electrical control system. Produces a snap movement after the elapse of a desired time interval and effects instantaneous response of a control mechanism. A spring detent is mounted on a support to engage and lock a vertically movable bolt in its lowered position against the tension of the spring. A fluid-filled cylinder rotatably mounted by means of a pin between the sides of a U-shaped bracket secured to the support effects tripping of spring detent after a timed interval. A yoke pivotally mounted on the pin extends over the cylinder and rotates independently as the cylinder pivots downward. A gravity-influenced ball within the cylinder travels away from its axis of pivoting and overcomes the tendency for the yoke to hold the cylinder in a downward position. The yoke passes to other side of center and allows the cylinder to pivot downward under influence of the ball, thereby gathering momentum and abruptly actuating the control mechanism as it reaches its lowest position. (Owner) Thomas H. Sheehan, 16205 Washburn, Detroit 21, Mich. Groups 33—59; 34—61. Reg. No. 9,945.

Pat. 2,443,382. SEXTANT. Patented June 15, 1948. An instrument for determining the elevation of celestial bodies, having a time piece arranged beyond a mirror in which the image of the bubble is reflected. When the operator has the image properly located, he can at the same time view the timepiece and note the time on the tape of a drum at side of casing without taking his eye from the sight opening of the sextant. (Owner) Russell Parry Ferlen, 303 Nevada St., Northfield, Minn. Group 39—11. Reg. No. 9,946.

Pat. 2,442,709. RINSING, DRYING, AND CANNING RACK. Patented June 1, 1948. A rack for rinsing and drying dishes may also be used for holding jars or cans during canning. An open-work wire frame is rotatably mounted on a tubular support. Circular wire rings at spaced intervals provide an outer rim for the container, a base for the device, and a support for the dishes. Upright supporting wires are secured to the outer rim and to the lower extremity of the tubular support. An additional rack for silverware is detachably mounted across the circular rack. When the device is used for canning, the racks are removed from the base and the cans positioned on the base rings and placed in the canning kettle. (Owner) Sydney N. Ramsdell, 100 South State St., Tama, Iowa. Groups 33—49; 34—41. Reg. No. 9,947.

Pat. 2,443,896. DOOR CLOSER. Patented June 22, 1948. Automatic door closer for prevention of slamming. One bore in body of device contains a piston working against fluid, with a by-pass for fluid to flow from one end of bore to other. A spring-controlled crosshead is slidable in another bore. Rods are connected to piston and crosshead, with an attaching plate connecting ends of rods to move piston and crosshead in unison. Plate is fastened to door jamb, body to door. Opening push on door exerts pull on connecting rods, extending the spring as crosshead moves toward head. Oil in top bore flows freely through piston, unseating the valve and allowing door to swing open unhindered. When opening pressure is released, the spring moves door toward closed position, reseating valve and forcing oil through by-pass. Speed with which door closes is governed by adjustment of needle valve in by-pass. (Owner) Joseph D. Denburger, 3347 Division St., Los Angeles 41, Calif. Group 33—59. Reg. No. 9,948.

The following 8 patents are owned by Herbert E. Page, 2846 Westshire Drive, Hollywood 28, Calif.

Pat. 1,887,719. GARMENT OR IRONING PRESS. Patented Nov. 15, 1932. The press head of this power-operated garment-pressing machine may be preliminarily closed to "safety-first" position by depressing either a hand lever or a foot pedal. To finally close the press head under heavy pressure, it is necessary for an operator to use both hands to simultaneously depress dual hand levers. If operator desires to hold the press head in final closed position, the levers are fully depressed so that latches will engage and maintain them in such position. Depressing either a second foot pedal or another hand lever will release the latches and permit the press head to return to its fully open position. When it is desired to press some garments with an intermittent pressing action, another hand lever is elevated, and such operation is automatically performed as long as the lever is held in such position. When the lever is released, the press head stops in its fully open position. Group 35—82. Reg. No. 9,949.

Pat. 2,046,531. TWO-HAND CONTROL DEVICE. Patented July 7, 1936. Device for controlling operation of a fluid motor of a garment-pressing machine compels an operator to use both hands and simultaneously depress dual hand controls during pressing operations. If either control is released before the press is closed, the motor is automatically de-energized and device rendered inoperative. If one control is held or tied down, the other lever will not operate the device. After an elapsed period (which may be varied) the device opens the press and returns to its starting position. When desired, the press may be opened by depressing a foot pedal. The hand levers are connected, respectively, to the arms of a T-lever which moves vertically and carries an operating member with it when both levers are simultaneously depressed. Depressing either hand lever without depressing the other will cause the T-lever to pivot to either one side or the other without moving the operating lever. Group 35—82. Reg. No. 9,950.

Pat. 2,051,739. GARMENT PRESSING MACHINE. Patented Aug. 18, 1936. Power-operated garment-pressing machine is provided with differential lever mechanism which quickly closes the press head to "safety-first" position through a short leverage, and then shifts to a longer leverage to finally close the press head under heavy pressure. During preliminary closing the differential lever is restrained from fulcruming to shift to the longer leverage until a roller on the end of one of its arms reaches the end of an inclined track and climbs upon the end of a vertical fulcrum rod. This fulcrum rod may be manually adjusted to compensate for material of different thicknesses. Group 35—82. Reg. No. 9,951.

Pat. 2,058,495. GARMENT PRESSING MACHINE. Patented Oct. 27, 1936. In this garment-pressing machine a single-cylinder fluid motor is floatingly mounted between two successively actuated levers which move in opposite directions. One of the levers (which carries the press head) is connected to the side of the cylinder, while the second lever at a lower level is connected to the piston rod. The motor first acts through a quick-acting short leverage to preliminarily close the press head to "safety-first" position, and finally closes it under heavy pressure by longer leverage. Movement of the lower lever is delayed until after the press is closed. Once the press is

closed, it will remain closed without further attention from operator. Dual hand controls require the operator to use both hands to operate the machine. Group 35—82. Reg. No. 9,952.

Pat. 2,148,085. PRESSING MACHINE. Patented Feb. 21, 1939. Garment-pressing machine is provided with a single controlling member which may be manually set in three positions for operating machine in different ways. When set in one position, the press mechanism is moved by power, governed by operator depressing a foot pedal lightly. The press head may be stopped at any point between fully open and closed position by depressing foot pedal various degrees and holding it. If pedal is released at any intermediate point, the press head automatically returns to open position. When pedal is fully depressed, the press head is automatically locked in closed position, and released only by depressing another foot pedal. Setting the control in another position converts the machine into a hand-controlled power press, with foot pedal inoperative. When set in a neutral or third position, the press may be manually operated by foot pedal independently of any power. Group 35—82. Reg. No. 9,953.

Pat. 2,175,127. GARMENT-PRESSING MACHINE. Patented Oct. 3, 1939. Power-operated pressing machine is designed to apply uniform pressure to garments of different thicknesses. A differential lever mechanism and a floating follow-up fulcrum means quickly close the press head under light pressure through short leverage, and shift to longer leverage to apply heavy pressure. The differential lever is restrained from pivoting during closing of the press and fulcrums only when resistance of the material to be pressed is encountered. Should an operator's hand be caught in the press, the fulcrum means will move so as to prevent application of heavy pressure. Adjustment of this machine is necessary only when pressing abnormally thick material. Group 35—82. Reg. No. 9,954.

Pat. 2,191,117. PRESSING MACHINE. Patented Feb. 20, 1940. Power-operated pressing machine is provided with a revolving buck having a pressing surface on each side and two press heads which move in an arcuate or orbital path about the buck and radially to open and close the press. During each pressing cycle the buck revolves one-half revolution to present a different pressing surface each time it stops so that an operator can unload and load the press while the other pressing face is engaged in a pressing operation. This permits an operator to accomplish the work of two machines. When the buck is loaded, it moves practically out of reach of operator before a press head closes. If desired, the buck may be held stationary and the press used as an ordinary machine. The pressing force is applied directly on top of the pressing elements without being passed through several levers. Group 35—82. Reg. No. 9,955.

Pat. 2,295,126. PRESSING MACHINE. Patented Sept. 8, 1942. Power-operated garment-pressing machine, in addition to the usual movable press head, is provided with a vertically movable buck. The press head is preliminarily closed under light pressure by quick-acting leverage without moving the buck, and heavy pressure then applied to both the head and buck through a change in leverage to finally close the press. Strains created during pressing operations are not transmitted to the yoke lever of the press head or to frame of machine. An upper lever for moving the press head and a lower lever for moving the buck are restrained from any substantial pivotal movement by cam means until the press is preliminarily closed, and then released to fulcrum in opposite directions to finally close the press. A cam roller on the inner end of upper lever rides over a cam surface on top of press head to close it and apply final heavy pressure. The outer ends of upper and lower levers are pivotally connected, respectively, to a piston rod and a cam projection on the bottom of the cylinder in a floating single-cylinder motor. These levers, near their inner ends, are pivoted to opposite ends of a floating C-shaped carrier, which is entirely free of the frame of the machine. Group 35—82. Reg. No. 9,956.

Pat. 2,433,261. PROCESS FOR MAKING ALL PLASTIC ARTIFICIAL EYES AND PRODUCT THEREOF. Patented Dec. 23, 1947. This patent describes an individually fitted artificial eye made of plastic material. The scleral portion is formed of layers of thermoplastic material of various translucencies and colors which, because of their blending of light absorption and reflection properties, give the eye a natural appearance and depth. The iris is molded into a socket by means of translucent colored plastic material which overlaps the edge of the iris to form a soft transition between the scleral portion and the iris, thus eliminating the staring effect of an artificial eye. (Owner) A. J. Brent, Brent Laboratories Limited, 62 Avenue Road, Toronto 5, Canada. Group 39—14. Reg. No. 9,957.

Pat. 2,445,519. DEVICE FOR EXERCISING OCULAR MUSCLES. Patented July 20, 1948. In this eye-exercising device a luminous object is moved between two fixed points, one close and the other relatively distant. The device consists of a tilted base provided with a head board (that includes an adjustable chin rest) and a foot board. Both boards support a pair of guide rods on which a fixation object is movable back and forth. The fixation object comprises a light bulb mounted on a housing for a switch and batteries. The exercise is preferably performed in a darkened room. The operator places his chin on the rest and slides the housing toward himself, focusing his eyes on the illuminated light bulb to a point where proper focus is not possible. At this time, the fixation object is withdrawn, extinguishing the light so that the eye muscles are relaxed, after which the operation is repeated for a period of time. (Owner) Merle E. Floegel, 9308 Glenville Road, Silver Spring, Md. Group 39—11. Reg. No. 9,958.

Dedicated Patents

The following patents and application held by Glass Science, Inc., having its principal office at 15 Broad St., New York, N. Y., have been dedicated to the public of the United States by instruments recorded in the United States Patent Office. The instruments read in part as follows: "• • • hereby grant to the public of the United States, and each and every member thereof, including persons, firms and corporations, the right to make, to use and to vend to others to be used, the said inventions . . . without any liability . . . to the said Glass Science, Inc. • • •."

Pat. 2,428,600. METHOD OF STAINING GLASS WITH COPPER HALIDE VAPORS. Patented Oct. 7, 1947. Ordinary soda lime glass (such as that used for window panes or bottles) may be successfully colored when volatile copper salts (such as cuprous chloride) are caused to react with the glass heated at temperatures ranging from 500° to 800° C., for varying lengths of time. If a high temperature and salt concentration is used, the glass will be coated with a reflecting metallic surface, or, if low concentrations are used, colors ranging from faint pink to deep red may be obtained, depending on the length of time the glass is subjected to treatment. The process may be advantageously used for treating individual glass articles for decorative and other purposes. The mirrored surfaces obtained cannot be dissolved by nitric acid. Group 32—39.

Pat. 2,430,520. DEPOSITION OF METAL ON GLASS FROM METAL FORMATES. Patented Nov. 11, 1947. This patent is somewhat similar to Pat. 2,428,600 except that the process is performed under vacuum. Metallo-organic compounds such as copper formate, or acetate, or the acetylacetonates of copper, nickel, or platinum are suitable. The glass article being coated is heated (350°—450° C.), and vaporized metal deposited on the glass surface produces a mirror, the thickness varying with the length of the process. Group 32—39.

Serial No. 597,144. GLASS MANUFACTURE. Group 32—39.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 21, 1948

[VOL. 614. No. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 490,616. AKTIEBOLAGET MÖLNBACKA-TRYSIL, Forshaga, Sweden. Filed Oct. 29, 1945.

F:HAGA

FOR BLEACHED SULPHITE PULP FOR THE MANUFACTURE OF PAPER AND RAYON.

Claims use since January 1945.

Ser. No. 518,864. ALLIED CHEMICAL & DYE CORPORATION, New York, N. Y. Filed Mar. 12, 1947.

BRS

FOR TAR-LIKE LIQUID BITUMINOUS MATERIAL FOR COMPOUNDING RUBBER.

Claims use since Sept. 26, 1946.

Ser. No. 519,026. PLASTIC GLASS CORPORATION, Brooklyn, N. Y. Filed Mar. 14, 1947.

GLACITE

FOR PLASTIC MATERIAL IN SHEET, ROD, AND TUBE FORM, USED IN THE FABRICATION OF AIRCRAFT ENCLOSURES, SAFETY SHIELDS, FURNITURE, WALL PANELS, NOVELTIES, ILLUMINATING ACCESSORIES, MODELS, DIALS, TABLEWARE, AND DECORATIVE ACCESSORIES.

Claims use since Mar. 3, 1947.

Ser. No. 520,966. NEWPORT INDUSTRIES, INC., Pensacola, Fla. Filed Apr. 18, 1947.

ZYLAR

FOR ZINC CALCIUM RESINATE USED PRINCIPALLY IN COATING AND PLASTIC COMPOSITIONS INCLUDING PRINTING INKS.

Claims use since Mar. 5, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 500,837. SPAULDING & COMPANY, Chicago, Ill. Filed Apr. 24, 1946.

The trade-mark consists of a right angle triangle in solid black color, with the hypotenuse thereof extending obliquely with respect to a container of contrasting color to which the trade-mark is applied. The mark is usually applied to the top left-hand corner of a rectangular box containing the goods.

FOR HAND LUGGAGE, TRUNK PORTFOLIOS, BAGS, AND CASES FITTED WITH TOILET ARTICLES, CASES FOR RECEIVING CARDS, POCKETBOOKS, WALLETS, CASES FOR HOLDING LETTERS, HANDBAGS, EVENING BAGS MADE OF FABRIC, PLASTIC, AND LEATHER, SUITCASES, TRAVELING BAGS, OVERNIGHT BAGS, AND TOILET CASES.

Claims use since Oct. 1, 1932.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 517,583. PARFA PARFUMERIE UND KOSMETIK, A. G., Zurich, Switzerland. Filed Feb. 15, 1947.

Til Duc

FOR AFTER SHAVING LOTION, AFTER SHAVING SKIN CREAM, BATH SALT, BEFORE DRY SHAVING LOTION, BRILLIANTINE, COLD CREAM, CREAM NAIL ENAMEL, HAIR DRESSING PREPARATION, NAIL POLISH REMOVER, PERFUME, TALCUM POWDER, TOILET WATER, VANISHING CREAM.

Claims use since Feb. 16, 1935.

Ser. No. 491,850. LANCOME, S. A., Paris, France. Filed Nov. 19, 1945.

KYPRE

FOR PERFUMES AND ROUGES.
Claims use since Feb. 21, 1935.

Ser. No. 507,941. SCHERING & GLATZ, INC., New York, N. Y., assignor to William R. Warner & Co., Inc., New York, N. Y., a corporation of Delaware. Filed Aug. 23, 1946. Under 10-year proviso.

SCHERING AND GLATZ, INC. S&G

Registration rights in the word "Inc.," apart from the mark as shown, are hereby disclaimed.
FOR MEDICINAL COMPRISING SOLUBLE BARBITAL FOR USE AS A SEDATIVE.
Claims use since Mar. 13, 1946.

Ser. No. 509,393. BRITISH COD LIVER OILS (HULL & GRIMSBY) LIMITED, Hull, England. Filed Sept. 20, 1946.

FOR COD LIVER OILS AND BY-PRODUCTS THEREOF.
Claims use since 1936.

Ser. No. 511,164. C. F. KIRK COMPANY, New York, N. Y. Filed Oct. 19, 1946.

RECTOCAINE

FOR SOLUTION OF ANESTHETICS IN VEGETABLE OIL FOR PROLONGED ANESTHESIA.
Claims use since January 1936.

Ser. No. 515,355. ALMAY, INC., New York, N. Y. Filed Jan. 7, 1947.

ALMAY

FOR FACE POWDER, LIPSTICK, ROUGE, TALCUM POWDER, COLD CREAM, ACNE LOTION, AND SHAMPOO.
Claims use since Dec. 10, 1946.

Ser. No. 522,614. E. SONNENSCHEIN & CO., INC., New York, N. Y. Filed May 17, 1947.

soNco

FOR CHEMICAL DYESTUFFS.
Claims use since 1932.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 486,011. U. S. AUTOMATIC CORPORATION, Amherst, Ohio. Filed July 19, 1945.

The word "Automatic" is disclaimed apart from the mark as shown. The border of the shield of the trademark shown in the accompanying drawing is lined for the color red, as is also the cross band and the word "Antomatic", the panel between the top of the shield and the cross band being lined for the color blue, and the word "Automatic" appearing on a white background.
FOR SCREW MACHINE PRODUCTS—NAMELY, ADAPTERS, DETACHABLE STEM TAIL BODIES, PRIMER BODIES, DELAY CHARGE HOLDERS, FIRING PINS, DETACHABLE STEM TAIL PIECES, NOSE PIECES, HEAD CLOSING PLUGS, AND TAIL CLOSING PLUGS, ALL OF THE GOODS FORMING PARTS, RESPECTIVELY, OF FIREARMS, PROJECTILES, OR GRENADES.
Claims use since Aug. 7, 1942.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 512,143. RED FEATHER PRODUCTS LTD., Redwood City, Calif., assignor to Red Feather Products Ltd., Redwood City, Calif., a corporation of California. Filed Nov. 2, 1946.

RED FEATHER

The drawing is mottled for shading purposes only.
FOR CARBON PAPER, TYPEWRITER RIBBONS, AND DUPLICATOR INKS.
Claims use since June 1, 1932.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

The drawing is lined for shading only.
FOR RUBBER CEMENT.
Claims use since Dec. 1, 1944.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 499,290. SOCIETE A RESPONSABILITE LIMITEE: PARFUMERIE DE JUSSY SAINT JAMES, VEUVE L. DUPONT & FILS, Montreuil-sous-Bois (Seine), France. Filed Dec. 5, 1947.

JUSSY SAINT-JAMES

Applicant claims ownership of French registration No. 339,916, dated May 18, 1942.
FOR PERFUME AND EAU DE COLOGNE.

Ser. No. 516,581. SCHENLEY LABORATORIES, INC., New York, N. Y. Filed Apr. 15, 1948.

DAIRYCILLIN

FOR PENICILLIN, FOR USE IN TREATMENT OF COWS AND OTHER MILK-PRODUCING ANIMALS.
Claims use since Oct. 21, 1946.

Ser. No. 516,582. SCHENLEY LABORATORIES, INC., New York, N. Y. Filed Mar. 10, 1948.

POULTRYCILLIN

FOR PENICILLIN, FOR USE IN THE TREATMENT OF POULTRY.
Claims use since Oct. 21, 1946.

Ser. No. 524,354. THE SELIG COMPANY, Atlanta, Ga. Filed Sept. 3, 1947.

FLAMEX

FOR FLAME PROOFING COMPOUND FOR ALL FABRICS.
Claims use since Sept. 6, 1946.

Ser. No. 526,798. PUBLICKER INDUSTRIES INC., Philadelphia, Pa. Filed July 5, 1947.

Paco

Applicant claims ownership of registrations Nos. 249,320 and 250,386.
FOR ETHYL ACETATE, BUTYL ACETATE, AMYL ACETATE, METHANOL, AND DENATURED ALCOHOL, INDUSTRIAL SOLVENT MIXTURES CONTAINING ESSENTIALLY DENATURED ALCOHOL, METHANOL, AND ETHYL ACETATE.
Claims use since May 1, 1928.

Ser. No. 527,216. ARTHUR E. SMITH, Los Angeles, Calif. Filed July 5, 1947.

Conducto UNITUBE

Applicant claims ownership of registration No. 261,647.
FOR LOCAL ANESTHETIZING, NERVE BLOCKING TABLETS, LOCAL ANESTHETIZING, NERVE BLOCKING SOLUTIONS, ANESTHETIC TABLETS, ANESTHETIC SOLUTIONS.
Claims use since Sept. 24, 1926.

Ser. No. 528,378. RIDD LABORATORIES, INCORPORATED, Edmonds, Wash. Filed July 11, 1947.

PET-EEZ

FOR PREPARATION CONTAINING FUNGICIDAL, GERMICIDAL, AND DEODORANT PROPERTIES FOR ANIMAL USE.
Claims use since June 23, 1947.

Ser. No. 529,287. A. M. MEINCKE & SON, INC., Chicago, Ill. Filed July 23, 1947. Under section 2f of the act of 1946.

ANGUS SUPERFINE

Applicant claims ownership of registration No. 345,582.
FOR PIGMENT FILLER FOR PAPER FILLING.
Claims use since May 15, 1931.

Ser. No. 529,863. B. T. BABBITT, INC., New York, N. Y. Filed July 29, 1947.

HORSE-SHOE

FOR LYE.
Claims use since October 1920.

Ser. No. 531,154. J. B. ROERIG AND COMPANY, Chicago, Ill. Filed Aug. 12, 1947.

PECTOL

FOR MEDICINAL PREPARATION CONTAINING MINERAL OIL, FLAVORED AQUEOUS JELLY, AND PECTIN USEFUL IN THE TREATMENT OF CONSTIPATION, SLUGGISH BOWELS AND INCOMPLETE ELIMINATION.
Claims use since Mar. 11, 1943.

Ser. No. 533,974. JOHN A. BACON, doing business as Bacon Associates, Chicago, Ill. Filed Sept. 10, 1947.

sun-sect

The word "Sun" is disclaimed apart from the mark.
FOR COMBINED SUN TAN LOTION AND INSECT REPELLANT.
Claims use since Apr. 11, 1947.

Ser. No. 538,047. SOCIETE DES USINES CHIMIQUES RHONE-POULENC, Paris, France. Filed Oct. 16, 1947.

BASANTINE

Applicant claims ownership of French registration No. 374,902.
FOR MEDICINAL PRODUCTS FOR THE TREATMENT OF THYROID DISEASES OF ANIMALS.

Ser. No. 538,048. SOCIETE DES USINES CHIMIQUES RHONE-POULENC, Paris, France. Filed Oct. 16, 1947.

PRIVENAL

Applicant claims ownership of French registration No. 327,632.
FOR MEDICAL PREPARATIONS FOR THE TREATMENT OF DISEASES OF ANIMALS.

Ser. No. 538,125. THE GREAT ATLANTIC AND PACIFIC TEA COMPANY, New York, N. Y. Filed Oct. 17, 1947.

Applicant claims ownership of registrations Nos. 386,068 and 395,937.
FOR AMMONIA, WASHING SAL SODA USED AS A WATER SOFTENER, LAUNDRY BLEACH, LIQUID BLUE, AND LAUNDRY STARCH.
Claims use on washing sal soda since Nov. 15, 1945; on laundry bleach since Feb. 16, 1946; on liquid blue and ammonia since Aug. 9, 1946; and on laundry starch since June 2, 1947.

Ser. No. 539,561. THE MORTON S. PINE CO., Cleveland, Ohio. Filed Oct. 30, 1947.

STRETCH

FOR WATER SOFTENER WITH INCIDENTAL CLEANING PROPERTIES.
Claims use since Mar. 9, 1939.

Ser. No. 539,646. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed Oct. 31, 1947.

'AEROSPORIN'

FOR ANTIBOTIC PREPARATION FOR PARENTERAL AND INTERNAL ADMINISTRATION.
Claims use since Oct. 27, 1947.

Ser. No. 539,867. GIVIEMME, S. A., Milan, Italy. Filed Nov. 1, 1947.

G.i. emme

The mark consists of the following letters—namely, GI. VI. EMME.
FOR PERFUMES, FACE POWDERS, TOILET WATERS, SACHET POWDERS, LOTIONS FOR THE HAIR, AND BRILLIANTINE.
Claims use since October 1921.

Ser. No. 540,344. WALLACE & TIERNAN PRODUCTS, INCORPORATED, Belleville, N. J. Filed Nov. 6, 1947.

LORZINEX

FOR PHARMACEUTICAL FOR PREPARATION OF ASTRINGENT, CLEANSING SOLUTIONS FOR MEDICINAL USE IN LAVAGE OF BODY CAVITIES AND IRRIGATION OF WOUNDS.
Claims use since July 30, 1947.

Ser. No. 541,748. RICHARD T. DUNN, doing business as The Smile Remedy Company, St. Louis, Mo. Filed Oct. 18, 1947.

PRID SALVE

No exclusive claim is made to the word "Salve" apart from the mark as shown. Applicant claims ownership of registration No. 205,690.
FOR SALVE FOR DRAWING AND HEALING AND FOR THE TREATMENT OF BOILS.
Claims use since June 1, 1910.

Ser. No. 541,810. CELANESE CORPORATION OF AMERICA, New York, N. Y. Filed Nov. 20, 1947.

CELANESE

FOR CHEMICALS FOR INDUSTRIAL AND OTHER USES, SUCH AS PLASTICIZERS, LUBRICANT ADDITIVES, SOLVENTS AND INTERMEDIATES—NAMELY, ORGANIC PHOSPHATES, SUCH AS TRIPHENYL PHOSPHATE AND TRICRESYL PHOSPHATE; ALDEHYDES, SUCH AS FORMALDEHYDE, ACETALDEHYDE AND PROPIONALDEHYDE; ORGANIC ACIDS, SUCH AS ACETIC ACID AND PROPIONIC ACID; KETONES, SUCH AS ACETONE AND METHYL ETHYL KETONE; ALCOHOLS, SUCH AS METHYL, ETHYL, PROPYL AND BUTYL ALCOHOLS; ORGANIC OXIDES, SUCH AS TETRAHYDROFURANE AND METHYLAL; AND GLYCOLS, SUCH AS 2-METHYL-1,3-PENTANEDIOL.
Claims use since June 1944.

Ser. No. 543,268. PAUL EDWARD BENNETT, doing business as Oralaid Company, Toledo, Ohio. Filed Dec. 4, 1947.

"CIRCULADE"

FOR PASTE-LIKE MODALITY USED IN THE TREATMENT OF GUMS.
Claims use since Oct. 8, 1947.

Ser. No. 543,669. THOMPSON-HAYWARD CHEMICAL COMPANY, Kansas City, Mo. Filed Dec. 6, 1947.

FOR-FUT-D

The letter "D" is disclaimed apart from the mark.
FOR VITAMIN FOOD SUPPLEMENT FOR LIVESTOCK.
Claims use since Oct. 21, 1947.

Ser. No. 543,872. ATLAS POWDER COMPANY, Wilmington, Del. Filed Dec. 10, 1947.

HINJ

FOR EMULSIFYING, DISPERSING, SOLUBILIZING, AND WETTING AGENTS.
Claims use since Nov. 13, 1947.

Ser. No. 544,326. CHARLES OF THE RITZ DISTRIBUTORS CORP., New York, N. Y. Filed Dec. 15, 1947.

BABY PINK

The word "Pink" is disclaimed apart from the mark.
FOR LIPSTICKS, FACE POWDER, ROUGE, TOILET WATER, DUSTING POWDER.
Claims use since Dec. 10, 1947.

Ser. No. 544,476. W. R. SWEENEY, MFGR, Salisbury, Mo. Filed Dec. 16, 1947.

ANT-GO

The word "Ant" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 152,280.
FOR POISONOUS INSECTICIDE FOR THE CONTROL OF SWEET-EATING ANTS.
Claims use since Apr. 1, 1934.

Ser. No. 544,477. W. R. SWEENEY, MFGR., Salisbury, Mo. Filed Dec. 16, 1947.

HY-LO

FOR POWDER AND LIQUID SPRAY INSECTICIDE FOR THE CONTROL OF HOUSE FLIES, FLEAS, BED BUGS, ANTS, POULTRY LICE, CRICKETS, AND CABBAGE AND MELON WORMS.

Auto-Chlor

FOR CHEMICAL SOLUTIONS FOR STERILIZING EATING UTENSILS.
Claims use since Jan. 1, 1938.

Ser. No. 550,623. SMITH, KLINE & FRENCH LABORATORIES, Philadelphia, Pa. Filed Feb. 26, 1948.

ESKAPOLYSUL

FOR SULFONAMIDE PREPARATION.
Claims use since Jan. 30, 1948.

Ser. No. 550,724. NESTLE'S MILK PRODUCTS, INC., New York, N. Y. Filed Feb. 27, 1948.

AROBON

FOR PREPARATION TO RELIEVE GASTRO-INTESTINAL DISORDERS.
Claims use since Jan. 7, 1948.

Ser. No. 550,861. MARTHA B. TRUITT, Chicago, Ill. Filed Feb. 28, 1948.

Green Leaf

FOR HAIR POMADE AND HAIR DRESSING.
Claims use since Oct. 1, 1947.

Ser. No. 550,881. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Feb. 28, 1948.

DIATRINE

Applicant claims ownership of registration No. 386,147.
FOR ANTI-HISTAMINIC PREPARATIONS.
Claims use since Feb. 9, 1948.

Ser. No. 551,348. JOHN WANAMAKER PHILADELPHIA, Philadelphia, Pa. Filed Mar. 5, 1948.

Capitone

FOR HAIR TONIC.
Claims use since 1910.

Ser. No. 552,046. ENDOCRINE COMPANY, Union City, N. J. Filed Mar. 16, 1948.

FEMACRINE

FOR NATURAL AND SYNTHETIC ESTROGENIC HORMONE SUBSTANCES ALONE OR IN COMBINATION WITH VITAMINS AND ANALOGOUS SUBSTANCES, FOR EITHER ORAL AND/OR PARENTERAL ADMINISTRATION.
Claims use since Feb. 21, 1946.

Ser. No. 553,127. PACIFIC GAS CORPORATION, New York, N. Y. Filed Mar. 26, 1948.

P.G.C.

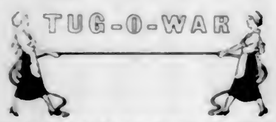
FOR BUTANE AND PROPANE GASES.
Claims use since Oct. 1, 1946.

CLASS 7

CORDAGE

Ser. No. 519,180. CHARLES C. DAVIS AND COMPANY, Chicago, Ill. Filed Nov. 7, 1947. Under section 2f of the act of 1946.

GENEVA



FOR TWINES, STRING, SASH CORD, AND CLOTHES LINE.
Claims use since May 20, 1927.

Ser. No. 540,982. THE COLORADO FUEL AND IRON CORPORATION, Denver, Colo. Filed Nov. 13, 1947.

WISSCOLASTIC

FOR WIRE, WIRE ROPE, AND CABLES.
Claims use since July 1947.

Ser. No. 546,940. ANCO CORPORATION, Pittsburgh, Pa. Filed Jan. 14, 1948.

The figures of the girls are purely fanciful.
Applicant claims ownership of registration No. 207,547.
FOR SASH CORD, CLOTHES-LINE AND ROPE.
Claims use since Nov. 24, 1924.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 546,904. HERCULES POWDER COMPANY, Wilmington, Del. Filed Aug. 9, 1947.

SPIRALOK

Applicant claims ownership of registration No. 396,630.
FOR SPECIALLY CONSTRUCTED CARTRIDGES USED FOR HIGH EXPLOSIVES.
Claims use since Dec. 29, 1941.

Ser. No. 547,284. EMORY HERBERT ROBERTSON, doing business as Robertson Fireworks Company, Fort Worth, Tex. Filed Jan. 16, 1948.

Auto Trix

No claim is made to the word "Auto" part from the mark.
FOR WHISTLING AUTO BOMB ATTACHED TO THE SPARK PLUGS, WHICH IGNITES AS THE CAR KEY IS TURNED ON OR THE STARTER BUTTON PRESSED.
Claims use since June 1, 1947.

Ser. No. 548,736. THE H. & D. FOLSOM ARMS CO. INC., New York, N. Y. Filed Feb. 4, 1948. Under section 2f of the act of 1946.

AUDLEY

Applicant claims ownership of registration No. 284,516.
FOR PISTOL HOLSTERS.
Claims use since Jan. 1, 1915.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 527,567. AUTOGRAPHIC REGISTER COMPANY, Hoboken, N. J. Filed July 5, 1947. Under section 2f of the act of 1946.

ECON-O-TYPE

Applicant claims ownership of registration No. 310,439.
FOR CARBON DISCS USED FOR MANIFOLDING IN TYPEWRITERS.
Claims use since Oct. 28, 1932.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 527,182. THE PRESSTITE ENGINEERING COMPANY, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

ADHERITE

FOR ASPHALTIC-BASE MATERIAL, SOLD AS A LIQUID COMPONENT AND DRY COMPONENT TO BE MIXED AT THE TIME OF USE, AND APPLIED TO CONCRETE AND OTHER MATERIALS, TO BOND THERETO NEW CONCRETE OR WOOD, ETC.; ALSO A HIGH-WOOL-CONTENT FELT HAVING ON ONE FACE A SYNTHETIC-RUBBER TYPE BASE ADHESIVE PROTECTED BY A NON-ADHESIVE STRIP OF CLOTH, ETC., WHICH IS REMOVED AT THE TIME OF USE FOR WEATHERSTRIPPING, ANTI-SQUEAK AND OTHER PURPOSES.
Claims use since July 15, 1930.

Ser. No. 541,939. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 21, 1947.

JAY BEE

FOR FIREBRICK.
Claims use since Jan. 31, 1931.

Ser. No. 545,582. CARR, ADAMS & COLLIER COMPANY, Dubuque, Iowa. Filed Dec. 27, 1947. Under section 2f of the act of 1946.

"Superior"

FOR WINDOWS AND DOOR FRAMES.
Claims use since September 1940.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 516,703. LAKESIDE ALUMINUM COMPANY, North Menomonie, Wis. Filed Aug. 28, 1947.

Steamliner

FOR PRESSURE COOKERS AND CANNERS.
Claims use since Sept. 19, 1945.

Ser. No. 527,543. ACKERMAN-JOHNSON CO., Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

Ackerman-Johnson

FOR FASTENING DEVICES—NAMELY, SCREW ANCHORS, STUD TYPE EXPANSION BOLTS, EXPANSION UNITS, TOGGLE SCREW ANCHORS, TOGGLE BOLTS, SPRING-WING TYPE TOGGLE BOLTS, CONCRETE INSERTS, CAP NUTS, METAL WASHERS FOR MACHINE SCREWS AND BOLTS, HANGER BOLTS, EYE BOLTS, SCREW HOOKS, MACHINE SCREWS, MACHINE BOLTS, PIPE STRAPS, AND CABLE CLAMPS.
Claims use since June 21, 1915.

Ser. No. 528,155. ALLEN INNOVATIONS, INC., New York, N. Y. Filed July 8, 1947.

ALPHA

FOR SLIDE FASTENERS.
Claims use since February 1937.

Ser. No. 529,727. THE UNION CHAIN AND MANUFACTURING COMPANY, Sandusky, Ohio. Filed July 26, 1947.

UNION

Applicant claims ownership of registrations Nos. 139,416, 141,256, 386,232, and 386,520.
FOR CHAIN AND CHAINS FOR GENERAL USE, AND PARTS THEREOF AND ATTACHMENTS THEREFOR.
Claims use since Mar. 14, 1914.

Ser. No. 532,799. BIN-HAT CORPORATION, Rochester, N. Y. Filed Aug. 29, 1947.

Decorod

FOR HANGERS OR BRACKETS FOR DRAPERIES, CURTAINS, AND THE LIKE.
Claims use since June 30, 1947.

Ser. No. 533,034. LEWIS BOLT & NUT COMPANY, Minneapolis, Minn. Filed Sept. 2, 1947. Under section 2f of the act of 1946.

SEALTITE

Applicant claims ownership of registration No. 295,256.
FOR BOLTS.
Claims use since Oct. 1, 1930.

Ser. No. 539,762. SCULLY SIGNAL COMPANY, Cambridge, Mass. Filed Oct. 31, 1947.

FILGARD

FOR AIR VENT TUBES WITH OR WITHOUT SIGNALING DEVICES AND WITH OR WITHOUT AN ANTI-SIPHON ATTACHMENT FOR USE IN FILLING TANKS AND ADAPTED TO BE INSTALLED IN THE FILL PIPE OF A TANK.
Claims use since Oct. 15, 1947.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 494,273. INLAND STEEL COMPANY, Chicago, Ill. Filed Sept. 5, 1947.

The trade-mark comprises the letter "I" in a diamond.
FOR FERROUS SHEETS, STRIPS, BARS, ANGLES FOR GENERAL USE, PLATES, RAILS, AND RAILWAY TIE PLATES AND SPLICE BARS.
Claims use since 1916.

Ser. No. 494,490. A. FINKL & SONS COMPANY, Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

FOR STEEL USED FOR DIE BLOCKS, HOT AND COLD TRIMMER DIES, HOT AND COLD COINING DIES, HOT AND COLD FORMING ROLLS IN FORGING MACHINES, HAMMERS AND PRESSES, STRAIGHTENING ROLLS.
Claims use since 1925.

Ser. No. 529,264. INLAND STEEL COMPANY, Chicago, Ill. Filed July 23, 1947. Under section 2f of the act of 1946.

FORMCOTE

Applicant claims ownership of registration No. 385,260.
FOR STEEL.
Claims use since Sept. 6, 1939.

Ser. No. 535,196. SUPERIOR METAL POWDERS CORPORATION, Toledo, Ohio. Filed Sept. 20, 1947.

Super-Met

No claim is made to the notation "Super" apart from the mark.
FOR METAL POWDERS.
Claims use since Jan. 17, 1947.

Ser. No. 537,157. GEORGE COHEN SONS & COMPANY LIMITED, London, England. Filed Oct. 8, 1947.

SINTREX

Applicant claims ownership of British registration No. 644,540, dated Feb. 5, 1946.
FOR POWDER OF IRON OR OTHER BASE METAL FOR USE IN METAL POWDER COMPACTING, CHEMICAL REDUCTION, AND CONCRETE FLOOR HARDENING.

Ser. No. 537,719. THE NILES ROLLING MILL COMPANY, Niles, Ohio. Filed Oct. 13, 1947.

ENAMELITE

Applicant claims ownership of registration No. 150,962.
FOR SHEET STEEL AND ENAMELING IRON SHEETS.
Claims use since August 1935.

Ser. No. 539,322. INLAND STEEL COMPANY, Chicago, Ill. Filed Oct. 28, 1947. Under section 2f of the act of 1946.

PAINT-TITE

FOR GALVANIZED STEEL IN SHEET FORM.
Claims use since May 1942.

Ser. No. 541,916. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Filed Nov. 21, 1947. Under section 2f of the act of 1946.

CHASE

Applicant claims ownership of registration No. 362,478.
FOR BRASS, COPPER, AND NONFERROUS ALLOY SHEETS, RODS, AND WIRE, AND SILVER SOLDER.
Claims use since Aug. 18, 1928.

Ser. No. 542,614. METALLIZING ENGINEERING CO. INC., Long Island City, N. Y. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

SPRASTEEL

Applicant claims ownership of registration No. 395,963.
FOR RODS OR WIRE CONSISTING OF OR CONTAINING FERROUS METAL FOR DEPOSITING METALS BY SPRAYING OR WELDING.
Claims use since Jan. 12, 1938.

Ser. No. 542,615. METALLIZING ENGINEERING CO. INC., Long Island City, N. Y. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

SPRABRONZE

Applicant claims ownership of registration No. 395,964.
FOR RODS OR WIRES CONSISTING OF OR CONTAINING COPPER FOR DEPOSITING METALS BY SPRAYING OR WELDING.
Claims use since July 20, 1938.

Ser. No. 542,617. METALLIZING ENGINEERING CO. INC., Long Island City, N. Y. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

SPRABABBITT

FOR WIRE OR ROD USED FOR METAL COATINGS.
Claims use since Aug. 31, 1938.

Ser. No. 542,618. METALLIZING ENGINEERING CO. INC., Long Island City, N. Y. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

SPRABRASS

FOR RODS OR WIRE CONSISTING OF OR CONTAINING COPPER FOR DEPOSITING METALS BY SPRAYING OR WELDING.
Claims use since Sept. 22, 1938.

Ser. No. 542,619. METALLIZING ENGINEERING CO. INC., Long Island City, N. Y. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

SPRAIRON

FOR RODS OR WIRE CONSISTING OF OR CONTAINING FERROUS METAL FOR DEPOSITING METALS BY SPRAYING OR WELDING.
Claims use since Dec. 29, 1938.

Ser. No. 545,152. MUELLER CO., Decatur, Ill. Filed Dec. 22, 1947. Under section 2f of the act of 1946.

MUELLER

Applicant claims ownership of registrations Nos. 64,609, 64,610, 64,611, 65,052, 66,513, 68,335, 68,337, 70,303, 85,269, 250,569 and 381,450.
FOR STEEL FORGINGS.
Claims use since Aug. 30, 1933.

Ser. No. 546,684. EUTECTIC WELDING ALLOYS CORPORATION, New York, N. Y. Filed Jan. 10, 1948.

CUTTRODE

FOR CUTTING ELECTRODES COMPOSED OF METAL.
Claims use since Nov. 21, 1947.

Ser. No. 546,685. EUTECTIC WELDING ALLOYS CORPORATION, New York, N. Y. Filed Jan. 10, 1948.

SURFALLOY

FOR METAL ALLOYS IN VARIOUS FORMS SUITABLE FOR WELDING, BRAZING, SOLDERING, AND HARD-SURFACING OPERATIONS.
Claims use since Dec. 18, 1947.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 528,101. S. C. JOHNSON & SON, INC., Racine, Wis. Filed July 7, 1947. Under section 2f of the act of 1946.

WAX-O-NAMEL

Applicant claims ownership of registrations Nos. 377,259 and 381,394.
FOR PAINT ENAMEL CONTAINING WAX.
Claims use since Oct. 24, 1938.

CLASS 19

VEHICLES

Ser. No. 530,308. THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio. Filed Aug. 2, 1947. Under section 2f of the act of 1946.

GOODYEAR

Applicant claims ownership of registrations Nos. 143,353 and 177,942.
FOR VEHICLE WHEEL RIMS.
Claims use since 1906.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 523,612. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio. Filed Jan. 5, 1948.

PHARISTYLE

FOR TILE AND FLOOR COVERINGS COMPOSED IN WHOLE OR IN PART OF RUBBER.
Claims use since May 1, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 516,460. JAMES H. CANNON, doing business as Cannon Electric Development Company, Los Angeles, Calif. Filed Sept. 27, 1947.

The words "Do It Electrically" are disclaimed apart from the mark as shown. Applicant claims ownership of registrations Nos. 425,506, 425,507, 425,508, and 418,856.
FOR ELECTRIC EQUIPMENT AND PARTS THEREFOR—NAMELY, ELECTRICAL CABLE CONNECTORS; WALL AND BOX MOUNTING RECEPTACLES AND ACCESSORY EQUIPMENT FOR THIS TYPE OF PRODUCTION—NAMELY, DUST-CAPS, JUNCTION BOXES, PLUGS AND SPECIAL FLANGES; SPECIAL FUNCTION SOLENOIDS; ELECTRICAL RELAYS; ELECTRICAL SWITCHES AND PUSH-BUTTONS; AND INSTITUTIONAL SIGNAL EQUIPMENT—NAMELY, CALL STATIONS, ENUNCIATORS, CORRIDOR PILOT LIGHTS, PAGING SYSTEMS, AND EXPLOSION AND VAPOR-PROOF SWITCHES.
Claims use since June 5, 1943.

Ser. No. 523,146. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich. Filed July 9, 1947.

FOR ELECTRICAL APPLIANCES—NAMELY, ELECTRIC MOTORS, INTERFERENCE ELIMINATORS, RADIO FILTERS, CONDENSERS, CIRCUIT PROTECTORS, AND THE PARTS THEREOF.
Claims use since Apr. 16, 1947.

Ser. No. 526,696. SONORA RADIO & TELEVISION CORPORATION, Chicago, Ill. Filed July 5, 1947.

The expression "Clear as a Bell" is disclaimed for the purpose of registration apart from the mark. Applicant claims ownership of registrations Nos. 125,680, 147,737, 210,112, 211,716, 427,337, 140,974, 191,619, and 199,048.
FOR RADIO RECEIVING SETS, TELEVISION RECEIVING SETS, AND ELECTRICAL PHONOGRAPHS.
Claims use since February 1922.

Ser. No. 527,153. SPENCER THERMOSTAT COMPANY, Attleboro, Mass. Filed July 5, 1947.

KLIXON

Applicant claims ownership of registrations Nos. 285,709, 204,291, 208,219, and 284,829.
FOR MAGNETIC RELAYS, AND MECHANICALLY-ACTUATED ELECTRIC SWITCHES.
Claims use since Sept. 3, 1930.

Ser. No. 527,213. W. N. MATTHEWS CORPORATION, St. Louis, Mo. Filed July 5, 1947.

FUSWITCH

Applicant claims ownership of registration No. 231,970.
FOR ELECTRIC SWITCHES AND FUSES.
Claims use since June 1916.

Ser. No. 527,356. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich. Filed July 5, 1947. Under section 2f of the act of 1946.

Burroughs

Applicant claims ownership of registrations Nos. 66,134, 333,110, 335,153, 335,607, 343,430, and 343,467.
FOR ELECTRICAL APPLIANCES—NAMELY, ELECTRIC MOTORS, INTERFERENCE ELIMINATORS, RADIO FILTERS, CONDENSERS, CIRCUIT PROTECTORS, AND THE PARTS THEREOF.
Claims use since 1906.

Ser. No. 527,671. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 5, 1947.

The lettering appearing on the figure in the drawing is so much of the word "Chromy" as is visible from the angle from which the figure is viewed.
FOR ELECTRIC HEATING UNITS AND ELECTRIC HEATERS—NAMELY, STRIP HEATERS, SEGMENT HEATERS, RING HEATERS, DISC HEATERS, HALF-SHEATHED HEATERS, CARTRIDGE HEATERS, CYLINDER HEATERS, SCREW-BASE HEATERS, ROD HEATERS, TUBULAR HEATERS, RADIANT HEATERS, OVEN HEATERS, BROILER HEATERS, FOOD TABLE HEATERS, AIR BLAST HEATERS, AIR DUCT HEATERS, UNIT HEATERS FOR SPACE HEATING, STEAM GENERATORS, CIRCULATION HEATERS, FLAT IRON HEATERS, PERCOLATOR HEATERS, CONVECTION HEATERS, HOT PLATES, RANGE PLATES, RANGE UNITS, STOVES, COOKING PLATES, HEATING PLATES, URN HEATERS, MELTING POTS, SOLDERING IRONS, FLUID SUPERHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, FLUID PREHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, RADIATORS, AIR HEATERS, BLOWER HEATERS, SPACE HEATERS, LIQUID HEATERS, IMMERSION HEATERS, INFRA-RED-RAY GENERATORS, FLATIRON BASES, AND BRANDING APPARATUS, AND PARTS THEREOF, AND ELECTRIC HEATING ELEMENTS, ELECTRIC RESISTANCE ELEMENTS, ELECTRIC RESISTANCE UNITS, ELECTRIC RESISTORS, ELECTRIC RHEOSTATS, ELECTRIC TRANSFORMERS, ELECTRO-MAGNETIC CONTACTORS, ELECTRIC SWITCHES, ELECTRIC THERMAL CUTOUTS, ELECTRIC CIRCUIT BREAKERS, ELECTRIC RESISTOR WIRE, ELECTRIC RESISTOR RIBBON, AND ELECTRICAL INSULATING TUBING, BEADS, BLOCKS, BUSHINGS, AND BODIES, AND PARTS THEREOF.
Claims use since January 1945.

Ser. No. 527,755. BURGESS BATTERY COMPANY, Freeport, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

LITTLE SIX

Applicant claims ownership of registration No. 340,358.
FOR DRY BATTERIES.
Claims use since Nov. 23, 1934.

Ser. No. 527,865. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 5, 1947.

Chromalox

FOR ELECTRIC HEATING UNITS AND ELECTRIC HEATERS—NAMELY, STRIP HEATERS, SEGMENT HEATERS, RING HEATERS, DISC HEATERS, HALF-SHEATHED HEATERS, CARTRIDGE HEATERS, CYLINDER HEATERS, SCREW-BASE HEATERS, ROD HEATERS, TUBULAR HEATERS, RADIANT HEATERS, OVEN HEATERS, BROILER HEATERS, FOOD TABLE HEATERS, AIR BLAST HEATERS, AIR DUCT HEATERS, UNIT HEATERS FOR SPACE HEATING, STEAM GENERATORS, CIRCULATION HEATERS, FLAT IRON HEATERS, PERCOLATOR HEATERS, CONVECTION HEATERS, HOT PLATES, RANGE PLATES, RANGE UNITS, STOVES, COOKING PLATES, HEATING PLATES, URN HEATERS, MELTING POTS, SOLDERING IRONS, FLUID SUPERHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, FLUID PREHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, RADIATORS, AIR HEATERS, BLOWER HEATERS, SPACE HEATERS, LIQUID HEATERS, IMMERSION HEATERS, INFRA-RED-RAY GENERATORS, FLATIRON BASES, AND BRANDING APPARATUS, AND PARTS THEREOF, AND ELECTRIC HEATING ELEMENTS, ELECTRIC RESISTANCE ELEMENTS, ELECTRIC RESISTANCE UNITS, ELECTRIC RESISTORS, ELECTRIC RHEOSTATS, ELECTRIC TRANSFORMERS, ELECTRO-MAGNETIC CONTACTORS, ELECTRIC SWITCHES, ELECTRIC THERMAL CUTOUTS, ELECTRIC CIRCUIT BREAKERS, ELECTRIC RESISTOR WIRE, ELECTRIC RESISTOR RIBBON, AND ELECTRICAL INSULATING TUBING, BEADS, BLOCKS, BUSHINGS, AND BODIES, AND PARTS THEREOF.
Claims use since October 1920.

Ser. No. 528,643. RAFI MANUFACTURING COMPANY, Toledo, Ohio. Filed July 15, 1947.

"RAFI"

FOR NEON SIGN EQUIPMENT—NAMELY, NEON TUBE SUPPORTS, ELECTRODE HOLDERS, ELECTRODE HOLDER COVERS.
Claims use since May 1, 1947.

Ser. No. 529,071. LOSEE PRODUCTS COMPANY, Hebron, Ill. Filed July 21, 1947.

Mystic-Maid

Applicant claims ownership of registration No. 380,097.
FOR DISPLACEMENT TYPE AUTOMATIC ELECTRIC HOT WATER STORAGE HEATERS.
Claims use since Nov. 22, 1939.

Ser. No. 529,510. THE F. W. WAKEFIELD BRASS COMPANY, Vermilion, Ohio. Filed July 25, 1947.

WAKEFIELD

W

No claim is made to the word "Wakefield" apart from the mark.
FOR ELECTRIC LUMINAIRES AND ELECTRIC LIGHTING FIXTURES.
Claims use since April 1946.

Ser. No. 531,408. WINPOWER MFG. COMPANY, Newton, Iowa. Filed Aug. 14, 1947. Under section 2f of the act of 1946.

POWR - PAK

FOR DIESEL ELECTRIC PLANTS CONSISTING OF DIESEL ENGINE DRIVEN GENERATORS.
Claims use since November 1938.

Ser. No. 532,993. THE ARROW-HART & HEGEMAN ELECTRIC COMPANY, Hartford, Conn. Filed Sept. 2, 1947.

TIMESAVER

FOR ELECTRIC SWITCHES.
Claims use since September 1933.

Ser. No. 533,520. AMPLIFIER CORP. OF AMERICA, New York, N. Y. Filed Sept. 5, 1947.

MAGNERAMA

FOR MAGNETIC SOUND RECORDING AND REPRODUCING APPARATUS AND PARTS THEREOF.
Claims use since Aug. 1, 1947.

Ser. No. 533,521. AMPLIFIER CORP. OF AMERICA, New York, N. Y. Filed Sept. 5, 1947.

MAGNESCOPE

FOR MAGNETIC SOUND RECORDING AND PLAYBACK APPARATUS AND PARTS THEREOF.
Claims use since Aug. 1, 1947.

Ser. No. 533,778. ROBBINS & MYERS, INC., Springfield, Ohio. Filed Sept. 8, 1947.

R&M BANNER

FOR ELECTRIC FANS.
Claims use since Sept. 1, 1940.

Ser. No. 534,859. AIRADIO, INCORPORATED, Stamford, Conn. Filed Sept. 18, 1947. Under section 2f of the act of 1946.

AIRADIO

Applicant claims ownership of registration No. 427,754.
FOR RADIO RECEIVERS, TRANSMITTERS, ELECTRICAL SOUND RECORDING APPARATUS, TELEVISION RECEIVERS, ELECTRICAL REMOTE CONTROL FOR RADIO EQUIPMENT, ANTENNA RELAYS, MULTI CONTACT CONNECTORS USED IN RADIO EQUIPMENT.
Claims use since 1937.

Ser. No. 536,989. AVCO MANUFACTURING CORPORATION, Cincinnati, Ohio. Filed Oct. 7, 1947. Under section 2f of the act of 1946.

CROSLEY

Applicant claims ownership of registrations Nos. 244,510, 333,597, 384,667, and 412,353.
FOR ELECTRIC RANGES.
Claims use since December 1937.

Ser. No. 538,939. MARQUETTE MANUFACTURING CO. INC., Minneapolis, Minn. Filed Oct. 24, 1947. Under section 2f of the act of 1946.

MARQUETTE

FOR BATTERY CHARGERS OF THE FOLLOWING NAMED TYPES: HIGH RATE CHARGERS, WALL CHARGERS, TRICKLE CHARGERS, HOME CHARGERS AND PORTABLE CHARGERS.
Claims use since June 15, 1918.

Ser. No. 542,627. MINUET LAMP INDUSTRIES, INC., Chicago, Ill. Filed Nov. 28, 1947.

Minuet

FOR ELECTRIC LAMPS.
Claims use since Dec. 5, 1945.

Ser. No. 544,025. AUTO-LITE BATTERY CORPORATION, Niagara Falls, N. Y. Filed Dec. 11, 1947.

Poralite

FOR ELECTRIC STORAGE BATTERIES AND PARTS THEREOF INCLUDING SEPARATORS THEREFOR.
Claims use since Sept. 9, 1947.

Ser. No. 544,520. BURGESS BATTERY COMPANY, Freeport, Ill. Filed Oct. 10, 1947.

TWIN-SIX

Applicant claims ownership of registrations Nos. 117,995 and 360,858.
FOR DRY BATTERIES AND ELECTRIC HAND LAMPS AND LANTERNS AND CASES THEREFOR.
Claims use since Mar. 3, 1917.

Ser. No. 544,679. ADVANCE ELECTRIC AND RELAY CO., Los Angeles, Calif. Filed Dec. 18, 1947.

ADVANCE

FOR BATTERY CHARGERS OF THE SYNCHRONOUS RECTIFIER TYPE AND ELECTRIC RELAYS INCLUDING BOTH ALTERNATING CURRENT RELAYS AND DIRECT CURRENT RELAYS, OF BOTH THE SINGLE-POLE AND MULTI-POLE TYPE.
Claims use since 1923.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 528,086. ABE HENRY COHEN, Pittsburgh, Pa. Filed July 7, 1947.

RABINGO

FOR DRAWING ROOM GAME IN THE PLAYING OF WHICH THE PARTICIPANTS MANIPULATE TOKENS OR THE EQUIVALENT THEREOF ON A BOARD.
Claims use since Mar. 10, 1947.

Ser. No. 529,091. S K F INDUSTRIES, INC., Philadelphia, Pa., and elsewhere. Filed July 21, 1947.

FOR METAL BALLS USED IN GAMES, BEING ROLLING BALLS FOR USE IN PIN BALL MACHINES, PUZZLES, BOWLING GAMES, BASEBALL GAMES, HOCKEY GAMES, AND GOLF GAMES OF THE MACHINE TYPE.
Claims use since Jan. 1, 1938.

Ser. No. 529,094. S K F INDUSTRIES, INC., Philadelphia, Pa., and elsewhere. Filed July 21, 1947.

ATLAS

Applicant claims ownership of registrations Nos. 82,196 and 375,061.
FOR METAL BALLS USED IN GAMES, BEING ROLLING BALLS FOR USE IN PIN BALL MACHINES, PUZZLES, BOWLING GAMES, BASEBALL GAMES, HOCKEY GAMES, AND GOLF GAMES OF THE MACHINE TYPE.
Claims use since Jan. 1, 1938.

Ser. No. 540,210. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 5, 1947.

The drawing is lined for the color gold. Applicant claims ownership of registration No. 379,450.
FOR TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS, AND TABLE TENNIS BATS.
Claims use since June 1921.

Ser. No. 540,211. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 5, 1947.

Kro-Bat

Applicant claims ownership of registration No. 214,768.
FOR TENNIS RACKETS, SQUASH RACKETS, AND BADMINTON RACKETS.
Claims use since July 27, 1923.

Ser. No. 540,212. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 5, 1947.

TOP-FLITE

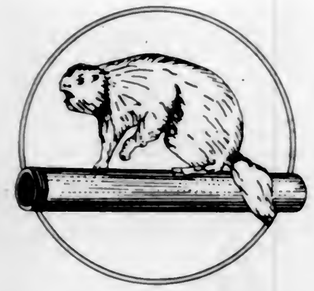
Applicant claims ownership of registration No. 390,505.
FOR GOLF BALLS, GOLF CLUBS, BASKETBALLS, VOLLEY BALLS, SOCCER BALLS, FOOTBALLS, TENNIS RACKETS, SQUASH RACKETS, SHUTTLECOCKS, BADMINTON RACKETS, BASEBALL BATS, SOFTBALL BATS, TABLE TENNIS BATS, AND TABLE TENNIS BALLS.
Claims use since July 1926.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 454,942. GENERAL ENGINEERING & MFG. CO., St. Louis, Mo. Filed Nov. 26, 1947.

GEMCO



FOR FACE GRINDERS FOR GRINDING TERRA COTTA, FIRE BRICK, STONE, ETC., SHAPERS FOR CUTTING AND SHAPING METALLIC ARTICLES, CATHEADS, JOINT BREAKERS, AND SPINNERS.
Claims use since Aug. 24, 1931.

Ser. No. 480,734. BORG-WARNER CORPORATION, Chicago, Ill. Filed Aug. 1, 1947. Under section 2f of the act of 1946.

LONG

FOR MECHANICAL POWER TRANSMISSIONS, CLUTCHES, FLUID WHEELS FOR POWER TRANSMISSION THROUGH FLUID MEANS, TORQUE CONVERTERS FOR POWER TRANSMISSION THROUGH FLUID MEANS, AND MECHANICAL TRANSMISSIONS FOR VEHICLES AND MACHINERY.
Claims use since Jan. 1, 1903.

Ser. No. 492,303. BEAVER PIPE TOOLS, INC., Warren, Ohio. Filed July 30, 1947.

No claim is made herein to the representation of a pipe apart from a representation of a beaver.
FOR PIPE WORKING MACHINES, THREADING MACHINES, REAMING MACHINES, CUTTING MACHINES, DIE STOCKS, DIES, PIPE CUTTERS, AND PARTS OF SUCH MACHINES AND ARTICLES.
Claims use since Sept. 2, 1919.

Ser. No. 506,325. LINCOLN ENGINEERING COMPANY, St. Louis, Mo. Filed July 5, 1947.

Powerluber

Applicant claims ownership of registration No. 423,437.
FOR PORTABLE LUBRICANT-DISPENSING APPARATUS—NAMELY, CONTAINERS ADAPTED TO RECEIVE LUBRICANT DRUMS, AND MOTOR-DRIVEN LUBRICANT GUNS COOPERATING THEREWITH.
Claims use since July 18, 1944.

Ser. No. 527,524. LAKE STATE PRODUCTS, INC., Jackson, Mich. Filed July 5, 1947.

Dishamatic

FOR DISHWASHING MACHINES.
Claims use since Jan. 31, 1947.

Ser. No. 528,689. B. H. BUNN COMPANY, Chicago, Ill. Filed July 16, 1947. Under section 2f of the act of 1946.

Bunn
PACKAGE TYING MACHINE

The words "Package Tying Machine" are disclaimed apart from the mark.
FOR PACKAGE TYING MACHINES.
Claims use since Apr. 4, 1922.

Ser. No. 529,963. CLEVELAND FROG & CROSSING CO., Cleveland, Ohio. Filed July 30, 1947.

FOR MECHANICAL SWITCHES AND SWITCH STANDS FOR RAILROADS.
Claims use since Feb. 1, 1909.

Ser. No. 530,719. THE CINCINNATI TOOL COMPANY, Norwood, Ohio. Filed Aug. 7, 1947. Under section 2f of the act of 1946.

HARGRAVE

FOR C-CLAMPS.
Claims use since 1904.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 500,076. THE GLOBE TOOL & ENGINEERING COMPANY, Dayton, Ohio. Filed Aug. 8, 1947.

GLOBE

FOR DYNAMIC BALANCING MACHINES.
Claims use since Apr. 9, 1931.

Ser. No. 504,954. EARL J. WELLS, doing business as Wells Mfg. Co., Comptche, Calif. Filed Aug. 15, 1947.

No claim is made to the words "Dial Mike" apart from the mark as shown in the drawing.
FOR MICROMETERS.
Claims use since May 18, 1946.

Ser. No. 509,093. MERVIN W. LA RUE, Chicago, Ill. Filed Sept. 16, 1947.

FOR SLIDE AND MOTION PICTURE FILMS.
Claims use since Jan. 15, 1946.

Ser. No. 509,915. CAMERAFLEX CORP., New York, N. Y. Filed July 30, 1947.

CAMERAFLEX

The descriptive term "Camera" is disclaimed.
FOR CAMERAS AND PROJECTORS FOR MOTION PICTURE AND STILL PICTURE PHOTOGRAPHY, AND PARTS THEREOF, AND SENSITIZED PHOTOGRAPHIC PAPER AND PHOTOGRAPHIC FILM.
Claims use since Feb. 28, 1946.

Ser. No. 511,507. SCULLY SIGNAL COMPANY, Cambridge, Mass. Filed Oct. 10, 1947.

SIGNALARM

FOR LIQUID LEVEL INDICATORS FOR TANKS.
Claims use since Sept. 26, 1946.

Ser. No. 514,933. THEODORE O. BLOMGREN, St. Louis Park, Minn. Filed July 26, 1947.

TEMPROTECTOR

FOR TEMPERATURE RESPONSIVE CIRCUIT CONTROL SWITCHES.
Claims use since Dec. 10, 1945.

Ser. No. 522,060. MARINE OPTICAL MFG. CO., Roslindale, Boston, Mass. Filed Oct. 9, 1947.

Spellbound

FOR OPTICAL FRAMES.
Claims use since Apr. 18, 1947.

Ser. No. 526,753. KASCO MILLS, INC., Waverly, N. Y. Filed July 5, 1947.

KASCOLATOR

FOR DAIRY FEED CALCULATING CHART FOR USE IN CONNECTION WITH THE FURNISHING OF PROPER NUTRITIONAL ELEMENTS AND QUANTITIES THEREOF TO MILK COWS.
Claims use since Jan. 20, 1947.

Ser. No. 527,129. W. N. MATTHEWS CORPORATION, St. Louis, Mo. Filed July 5, 1947.

TELEHEIGHT

Applicant claims ownership of registration No. 408,900.
FOR HEIGHT-MEASURING INSTRUMENTS OPERATING BY TRIANGULATION.
Claims use since 1915.

Ser. No. 531,237. PARAGON-REVOLUTE CORPORATION, Rochester, N. Y. Filed Aug. 13, 1947.

PARAGON-REVOLUTE

FOR MACHINES FOR MAKING BLUE PRINTS AND OTHER PRINTS SUCH AS BROWN-LINE PRINTS, WHITE PRINTS, AND REPRODUCED TRACINGS, AND MACHINES FOR DRYING SUCH PRINTS AND PHOTOCOPYPRINTS.
Claims use since July 18, 1927.

Ser. No. 531,239. PARAGON-REVOLUTE CORPORATION, Rochester, N. Y. Filed Aug. 13, 1947.

REVOLUTE

FOR MACHINES FOR MAKING BLUE-PRINTS AND OTHER PRINTS, SUCH AS BROWN-LINE PRINTS, WHITE PRINTS, AND REPRODUCED TRACINGS.
Claims use since August 1905.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 529,543. ARROWHEAD WATER SOFTENING EQUIPMENT CO., Los Angeles, Calif. Filed July 26, 1947.

ARROWHEAD

FOR ZEOLITE SYNTHETIC MINERAL WATER SOFTENING EQUIPMENT IN THE FORM OF ONE OR TWO TANKS HAVING SUITABLE PIPES AND VALVES AND ADAPTED TO BE CONNECTED IN THE HARD WATER SUPPLY LINE, AND CONTAINING ZEOLITE AND SALT BRINE, RESPECTIVELY, FOR REMOVING CHEMICALS FROM THE WATER DURING ITS FLOW THROUGH THE TANKS, SO AS TO REDUCE THE GRAIN HARDNESS OF THE WATER TO ZERO.
Claims use since July 18, 1947.

Ser. No. 538,643. LEHIGH FOUNDRIES, INC., Easton, Pa. Filed Oct. 22, 1947.

BLU-COLD

The word "Cold" is disclaimed apart from the mark.
FOR CONDENSING UNITS USED IN REFRIGERATION.
Claims use since July 10, 1946.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 516,744. UNITED STATES RUBBER COMPANY, New York, N. Y. Filed Aug. 20, 1947.

KOYLON

Applicant claims ownership of registrations Nos. 388,646, 397,283, and 397,775.
FOR MATTRESSES AND BAR STOOL CUSHIONS OF FOAM RUBBER.
Claims use since Nov. 9, 1946, on mattresses; and on bar stool cushions since Dec. 2, 1946.

Ser. No. 518,533. THE KENMAR MANUFACTURING COMPANY, East Palestine, Ohio. Filed Feb. 5, 1948.

The word "Built" is disclaimed apart from the mark. The lining in the drawing is for shading only.
FOR UPHOLSTERED DAVENPORTS, UPHOLSTERED CHAIRS, OCCASIONAL AND RECLINING CHAIRS AND STOOLS, DININGROOM CHAIRS, SOFA BEDS AND CHAISE LONGUES.
Claims use since Dec. 9, 1946.

Ser. No. 524,246. THE KENMAR MANUFACTURING COMPANY, East Palestine, Ohio. Filed Feb. 5, 1948.

"RESTMASTER"

FOR RECLINING CHAIRS.
Claims use since Mar. 1, 1947.

Ser. No. 528,176. A. S. ALOE COMPANY, St. Louis, Mo. Filed July 9, 1947.

aloe

FOR HOSPITAL AND DOCTORS' OFFICE FURNITURE—NAMELY, DORMITORY BEDS FOR INTERNS AND NURSES, BED MATTRESSES, BOOK CASES, FILING CABINETS, PILLOWS, CHAIR CUSHIONS, OFFICE CHAIRS, STOOL CUSHIONS, READING TABLES, DESKS, READING STANDS, RECEPTION ROOM SETTEES, CHAIRS, SMOKING STANDS, COSTUMERS, TELEPHONE STANDS, WARDROBES, AND OFFICE TABLES.
Claims use since 1860.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

FOR BRAKE DRUMS.
Claims use since Dec. 17, 1935.

Reg. No. 419,361. Registered Feb. 12, 1946. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Clipper

FOR SEAT COVERS FOR MOTOR VEHICLES.
Claims use since June 18, 1945.

Reg. No. 421,830. Registered June 18, 1946. BOND FOUNDRY AND MACHINE COMPANY, Manheim, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR HAND TRUCKS.
Claims use since on or about Dec. 2, 1930.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 132,881. Registered July 6, 1920. ART LAMP MFG. CO., Chicago, Ill. Republished by Art Lamp Corporation, Chicago, Ill., a corporation of Illinois.

The word "Lamps" is disclaimed apart from the mark as shown.

FOR ELECTRICALLY-LIGHTED FLOOR LAMPS, CHAIR-LAMPS, TORCHÈRES, BRIDGE-LAMPS, LANTERNS, DAVENPORT-LAMPS, CANDELABRA, AND TABLE-LAMPS.

Claims use since June 1, 1919.

Reg. No. 288,872. Registered Nov. 10, 1931. JENSEN RADIO MANUFACTURING COMPANY, Chicago, Ill. Republished by Jensen Manufacturing Company, Chicago, Ill., a corporation of Nevada.

P M SPEAKER

The word "Speaker" is disclaimed apart from the mark as shown.

FOR RADIO LOUD SPEAKERS.

Claims use since May 19, 1931.

Reg. No. 344,512. Registered Mar. 30, 1937. CRESCENT INSULATED WIRE AND CABLE CO., INC., Trenton, N. J., a corporation of New Jersey. Republished by registrant.

CRESCENT

FOR ELECTRICAL WIRE, CABLE AND CONDUCTORS, BOTH INSULATED AND UNINSULATED, AND WIRE, CABLE, HARNESSES AND CORD SETS HAVING CONNECTORS, SOCKETS, AND/OR TERMINAL MEMBERS CARRIED THEREBY, OTHER THAN AUTOMOBILE HARNESS, AUTOMOBILE BATTERY CABLE LEADS, AUTOMOBILE HI-TENSION IGNITION CABLE, AUTOMOBILE TERMINALS FOR USE ON WIRE AND CABLE, AND AUTOMOBILE LIGHTING CABLE.

Claims use since Aug. 3, 1891.

Reg. No. 394,905. Registered May 5, 1942. JENSEN RADIO MANUFACTURING COMPANY, Chicago, Ill. Republished by Jensen Manufacturing Company, Chicago, Ill., a corporation of Nevada.

Hyperf

FOR LOUD SPEAKERS, EACH SAID LOUD SPEAKER INCLUDING AN ELECTRO-ACOUSTIC TRANSDUCER.

Claims use since July 23, 1941.

Reg. No. 394,906. Registered May 5, 1942. JENSEN RADIO MANUFACTURING COMPANY, Chicago, Ill. Republished by Jensen Manufacturing Company, Chicago, Ill., a corporation of Nevada.

Speech-Master

FOR LOUD SPEAKERS, EACH SAID LOUD SPEAKER INCLUDING AN ELECTRO-ACOUSTIC TRANSDUCER DRIVER UNIT AND PARTS THEREOF.

Claims use since Mar. 20, 1941.

Reg. No. 430,272. Registered June 10, 1947. ALLIED STORES CORPORATION, Wilmington, Del., Seattle, Wash., Syracuse, N. Y., and Paterson, N. J., a corporation of Delaware. Republished by registrant, present location New York, N. Y.

AMBASSADOR

FOR RADIO RECEIVING SETS AND RADIO PHONOGRAPH COMBINATIONS.

Claims use since Apr. 11, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 377,971. Registered May 21, 1940. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

TRU- SHOT

FOR GOLF CLUBS AND GOLF BALLS.

Claims use since on or about Mar. 15, 1939.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 17,700. Registered Mar. 25, 1890. CATTARAUGUS CUTLERY COMPANY, Little Valley, N. Y., a corporation of New York. Republished by registrant.

W.W.WILSON.

LITTLE VALLEY.N.Y.

FOR BUTCHER, SKINNING, STICKING, BONING AND STEAK KNIVES, AND THE VARIOUS STEEL IMPLEMENTS AND KNIVES USED IN THE BUTCHERING BUSINESS.

Claims use since about July 1, 1887.

Reg. No. 63,389. Registered June 18, 1907. CATTARAUGUS CUTLERY CO., Little Valley, N. Y., a corporation of New York. Republished by registrant.

FOR POCKET-KNIVES, TABLE KNIVES AND FORKS, SHEARS, SCISSORS, RAZORS, BUTCHER-KNIVES, CARVING-KNIVES AND PRUNING-KNIVES.

Claims use since Sept. 1, 1904.

Reg. No. 73,447. Registered Apr. 20, 1909. JABEZ BURNS & SONS, New York, N. Y. Republished by Jabez Burns & Sons, Inc., New York, N. Y., a corporation of New York.

FOR COFFEE AND SPICE MILL MACHINERY AND ROASTERS FOR COFFEE.

Claims use since Apr. 1, 1908.

Reg. No. 79,400. Registered Sept. 6, 1910. BOND FOUNDRY AND MACHINE COMPANY, Manheim, Pa., a corporation of Pennsylvania. Republished by registrant.

SPIRO

FOR SHAFT COUPLINGS.

Claims use since Feb. 1, 1910.

Reg. No. 92,385. Registered July 8, 1913. THE AMERICAN MULTIGRAPH SALES COMPANY, Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Flexotype

FOR PRINTING PRESSES (USING TYPE OR PLATES), FORM HOLDERS, TYPE LOCKING DEVICES, FEEDING APPARATUS, INKING ROLLERS, TYPESETTING AND DISTRIBUTING MACHINES, TYPE TRANSFER TOOLS, AND PARTS OF SUCH DEVICES.

Claims use since about May 15, 1909.

Reg. No. 95,599. Registered Mar. 3, 1914. CATTARAUGUS CUTLERY CO., Little Valley, N. Y., a corporation of New York. Republished by registrant.

FOR RAZORS.

Claims use since Apr. 1, 1906.

Reg. No. 111,660. Registered July 25, 1916. CATTARAUGUS CUTLERY CO., Little Valley, N. Y., a corporation of New York. Republished by registrant.

"FLEXO"

FOR CUTLERY — VIZ., BUTCHER-KNIVES AND POCKET-KNIVES.

Claims use since Aug. 19, 1915.

Reg. No. 122,816. Registered Sept. 17, 1918. PINE TREE MILKING MACHINE COMPANY, Chicago, Ill. Republished by Babson Bros. Co., Chicago, Ill., a corporation of Illinois.

PINE TREE

FOR MILKING-MACHINES.

Claims use since about March 1917.

Reg. No. 139,499. Registered Feb. 8, 1921. CATTARAUGUS CUTLERY CO., Little Valley, N. Y., a corporation of New York. Republished by registrant.

Little Injun

FOR PENKNIVES, JACKKNIVES, KITCHEN-KNIVES, BUTCHER-KNIVES, KITCHEN-FORKS, CARVING-KNIVES, CARVING-FORKS, RAZORS, CARVING-STEELS, AND TABLE-FORKS, TABLE-KNIVES, AND TABLE-SPOONS MADE OF BASE METAL.

Claims use since Oct. 13, 1919.

Reg. No. 166,404. Registered Apr. 3, 1923. THE DE VILBISS MANUFACTURING CO., Toledo, Ohio. Republished by The De Vilbiss Company, Toledo, Ohio, a corporation of Ohio.

DeVilbiss

FOR COMPRESSED-AIR SPRAYING MACHINES FOR APPLYING PAINTS, VARNISHES, LACQUER, ENAMELS AND THE LIKE, AND PARTS THEREOF, AND AIR-OPERATED AGITATORS, HOSE CLEANERS, AIR-REGULATING DEVICES, AIR-WASHING DEVICES, EXHAUST FANS AND HOODS USED THEREWITH, TURNTABLES, AND POWER-DRIVEN AIR-COMPRESSING OUTFITS (PORTABLE AND STATIONARY) FOR USE IN CONNECTION WITH SUCH MACHINES.

Claims use since 1911.

Reg. No. 198,619. Registered May 19, 1925. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Bondex

FOR LOOM PICKERS, CHECK STRAPS.

Claims use since December 1923.

Reg. No. 199,796. Registered June 16, 1925. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

No claim is made to the representation of the goods apart from the mark as shown.

FOR LEATHERED LOOM SUNDRIES, BUMPER, HOLD-UP, LUG, HARNESS, JACK, HEEL STRAPS.

Claims use since Apr. 28, 1920.

Reg. No. 209,517. Registered Feb. 23, 1926. CATTARAUGUS CUTLERY CO., Little Valley, N. Y., a corporation of New York. Republished by registrant.

FOREST QUEEN

FOR SHEATH KNIFE.

Claims use since Jan. 1, 1925.

Reg. No. 228,679. Registered June 7, 1927. UNION CONFECTIONERY MACHINERY CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

UNION
Rebuilt
Candy Machinery

The words "Rebuilt Candy Machinery" are disclaimed apart from the mark as shown.

FOR MACHINERY FOR THE USE OF BAKERS AND CONFECTIONERS IN MAKING CANDY AND CHOCOLATE.

Claims use since June 1, 1921.

Reg. No. 228,680. Registered June 7, 1927. UNION CONFECTIONERY MACHINERY CO. INC., New York, N. Y., a corporation of New York. Republished by registrant.

UNION

FOR MACHINERY FOR THE USE OF BAKERS AND CONFECTIONERS IN MAKING CANDY AND CHOCOLATE.

Claims use since June 1, 1921.

Reg. No. 240,680. Registered Apr. 3, 1928. GRUENDLER PATENT CRUSHER AND PULVERIZER COMPANY, St. Louis, Mo. Republished by Gruendler Crusher and Pulverizer Co., St. Louis, Mo., a corporation of Missouri.

All the words except "Gruendler" and the name of the corporation (both appearances), and the representation of the goods are disclaimed apart from the mark as shown.

FOR CRUSHERS, SHREDDERS, BREAKERS, PULVERIZERS, AND GRINDERS.

Claims use since some time in April 1920.

Reg. No. 253,798. Registered Mar. 5, 1929. THE SPEEDAUMATIC COMPANY, Chicago, Ill., now by change of name Speedaumat Addressing Machinery, Incorporated, assignor to Speedaumat Manufacturing Company, Chicago, Ill. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Speedaumat

FOR PRINTING PLATES FOR ADDRESSING AND SIMILAR MACHINERY, EMBOSSING MACHINES, ADDRESSING MACHINES, MAILING MACHINES, AND GALLEY TRAYS.

Claims use since 1919.

Reg. No. 261,043. Registered Sept. 3, 1929. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

BONDIT

FOR SHAFT COUPLINGS.

Claims use since May 17, 1926.

Reg. No. 261,105. Registered Sept. 3, 1929. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

BONDTRU

FOR SHAFT COUPLINGS.

Claims use since Nov. 1, 1927.

Reg. No. 266,674. Registered Jan. 28, 1930. BURGESS-NORTON MFG. CO., Geneva, Ill., a corporation of Illinois. Republished by registrant.

B-N

FOR PISTON PINS, POWER TRANSMISSION CLUTCHES AND PARTS THEREOF.

Claims use since Apr. 1, 1919.

Reg. No. 275,169. Registered Sept. 16, 1930. JABEZ BURNS & SONS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

STIRFLEX

FOR APPARATUS FOR MECHANICALLY COOLING ROASTED COFFEE AND OTHER MATERIALS.

Claims use since Apr. 1, 1930.

Reg. No. 275,550. Registered Sept. 23, 1930. J. L. FERGUSON COMPANY, Joliet, Ill., a corporation of Illinois. Republished by registrant.

"PACKOMATIC"

FOR PACKAGING MACHINERY—NAMELY, CARTON-SEALING MACHINES, MACHINES FOR AUTOMATICALLY FILLING PREDETERMINED AMOUNT OF PRODUCTS INTO RECEPTACLES, CARTON-FORMING MACHINES, CONTAINER-SEALING MACHINES, PACKING AND WRAPPING TABLES, SPECIAL MACHINERY MADE TO ORDER, DIES AND REPAIR PARTS THEREFOR.

Claims use since 1929.

Reg. No. 277,075. Registered Nov. 4, 1930. CATTARAUGUS CUTLERY COMPANY, Little Valley, N. Y., a corporation of New York. Republished by registrant.

FOR POCKET-KNIVES AND HUNTING KNIVES.

Claims use since Jan. 1, 1900.

Reg. No. 296,295. Registered Aug. 2, 1932. CATTARAUGUS CUTLERY COMPANY, Little Valley, N. Y., a corporation of New York. Republished by registrant.

"A Knife to WHITTLE KRAFT Make Things With"

No claim is made to the exclusive use of the slogan "A Knife to Make Things With."

FOR POCKET KNIFE.

Claims use since Nov. 20, 1931.

Reg. No. 321,389. Registered Jan. 29, 1935. MOTO-SWAY CORPORATION OF AMERICA, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MOTO-SWAY

FOR ROCKING DEVICES FOR AUTOMOBILES FOR ALTERNATELY LIFTING EITHER SIDE OF THE CHASSIS OR VEHICLES FOR RELEASING THE WEIGHT OFF THE SPRINGS SO AS TO SEPARATE THE SPRING TO PERMIT OILING OR GREASING BETWEEN SAID SPRING LEAVES.

Claims use since March 1933.

Reg. No. 327,764. Registered Sept. 3, 1935. CATTARAUGUS CUTLERY COMPANY, Little Valley, N. Y., a corporation of New York. Republished by registrant.

HIGH BALL

FOR KNIFE.

Claims use since Jan. 10, 1935.

Reg. No. 328,835. Registered Oct. 8, 1935. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

MULTDIGESTION

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR SLUDGE TREATING SYSTEMS WHICH INCLUDE APPARATUS OR EQUIPMENT SUCH AS THICKENERS OR CLARIFIERS AND/OR DIGESTERS.

Claims use since Mar. 5, 1935.

Reg. No. 343,664. Registered Mar. 2, 1937. THE DORR COMPANY, INC., New York, N. Y. Republished by The Dorr Company, New York, N. Y., a corporation of Delaware.

TORQ

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS AND MORE PARTICULARLY FOR SEDIMENTATION APPARATUS SUCH AS THICKENERS AND CLARIFIERS.

Claims use since the third week of March 1936.

Reg. No. 362,669. Registered Nov. 29, 1938. G. N. COUGHLAN CO., Orange, N. J., a corporation of New Jersey. Republished by registrant, present location West Orange, N. J.

Easy-Aid

FOR PEA SHELLERS, KITCHEN SHEARS, JAR OPENERS, EGG SLICERS, PIE AND CAKE SERVERS, PARING KNIVES, GRAPEFRUIT KNIVES, SLICING KNIVES, EGG SLICER FRAMES, POT HOLDERS, BREAD KNIVES, CAN OPENERS, ICE PICKS, CAKE TURNERS, WIRE FORKS, BASTING SPOONS, SCOOPS, SALAD BALLERS, CORER AND PARERS, POTATO

MASHERS, BATTER WHIPS, GRATERS, MIXING SPOONS, PLATE SCRAPERS, VEGETABLE SERVERS, VEGETABLE BRUSHES, VEGETABLE MASHERS, KITCHEN FORKS.
Claims use since July 22, 1935.

Reg. No. 367,396. Registered May 16, 1939. CATTARAUGUS CUTLERY COMPANY, Little Valley, N. Y., a corporation of New York. Republished by registrant.

VANADALOY

FOR HOUSEHOLD CUTLERY OF BASE METAL—NAMELY, ALL KINDS OF KNIVES AND FORKS AND SPOONS, BUTCHER KNIVES, STICKING KNIVES, SKINNING KNIVES, BONING KNIVES, SLICING KNIVES, TRIMMING KNIVES, FISH KNIVES, POULTRY KNIVES, OYSTER KNIVES, PALLETTE KNIVES; HUNTING KNIVES, SOLID BLADE; HUNTING KNIVES, HINGED BLADE; CAKE SERVERS, CHEESE SERVERS.
Claims use since June 1, 1936.

Reg. No. 385,884. Registered Mar. 18, 1941. CATTARAUGUS CUTLERY COMPANY, Little Valley, N. Y., a corporation of New York. Republished by registrant.

Toll House

FOR CARVING SETS AND KNIVES.
Claims use since Nov. 2, 1940.

Reg. No. 399,318. Registered Dec. 29, 1942. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

ADDRESSOcote

FOR PRINTING DEVICES FOR USE IN ADDRESSING AND SIMILAR MACHINES—NAMELY, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE ALONE, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE IN FRAMES, AND FRAMES FOR SAID PLATES.
Claims use since on or about Nov. 22, 1938.

Reg. No. 399,839. Registered Feb. 2, 1943. JABEZ BURNS & SONS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ROTA-PACT

FOR MACHINES FOR GRINDING, CRACKING, OR OTHERWISE TREATING COFFEE AND OTHER MATERIALS.
Claims use since July 1, 1942.

Reg. No. 430,314. Registered June 10, 1947. EARL L. CODDINGTON, Middletown, Ohio. Republished by registrant.

CYCLONE

FOR POWER OPERATED MACHINE FOR MOWING GRASS AND WEEDS.
Claims use since June 1939.

Reg. No. 431,234. Registered July 15, 1947. WINTERS BROTHERS COMPANY, Wrentham, Mass., a corporation of Michigan. Republished by registrant, present location Rochester, Mich.

The exclusive right to use the representation of a tap per se apart from its inclusion with other features of the mark is disclaimed apart from the mark as shown.
FOR TAPS AND DIES.
Claims use since June 25, 1946.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 425,528. Registered Nov. 26, 1946. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Wizard

FOR POWER DRIVEN MECHANICAL WASHERS AND IRONERS.
Claims use since July 2, 1937.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 148,546. Registered Nov. 15, 1921. TITMUS OPTICAL COMPANY, INC., Petersburg, Va., a corporation of Virginia. Republished by registrant.

PERFEX

FOR OPTICAL LENSES.
Claims use since on or about Aug. 15, 1918.

Reg. No. 247,106. Registered Sept. 18, 1928. TITMUS OPTICAL COMPANY, INC., Petersburg, Va., a corporation of Virginia. Republished by registrant.

VELVET-LITE

FOR OPTICAL LENSES.
Claims use since April 1927.

Reg. No. 289,134. Registered Nov. 17, 1931. TITMUS OPTICAL COMPANY, INC., Petersburg, Va., a corporation of Virginia. Republished by registrant.

BONVUE FULL VISION LENS

The words "Full Vision Lens" are disclaimed apart from the mark as shown.
FOR OPTICAL LENSES.
Claims use since on or about November 1930.

Reg. No. 338,821. Registered Sept. 15, 1936. NATIONAL ALUMINATE CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

NALCOMETER

FOR ELECTRICAL MEASURING DEVICES USED IN DETERMINING THE SOLIDS DISSOLVED IN BOILER WATER.
Claims use since Feb. 4, 1936.

Reg. No. 374,098. Registered Jan. 2, 1940. TITMUS OPTICAL COMPANY, INC., Petersburg, Va., a corporation of Virginia. Republished by registrant.

CONTRA-GLARE

The word "Glare" is disclaimed apart from the mark as shown.
FOR LENSES FOR USE IN MAKING UP EYE GLASSES AND SPECTACLES TO REGULAR OCULISTS' PRESCRIPTIONS.
Claims use since Jan. 11, 1939.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 167,785. Registered May 8, 1923. HARRY C. SCHICK, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

Schicksnaps

FOR NECKLACE CLASPS AND FASTENERS.
Claims use since Jan. 15, 1922.

Reg. No. 288,966. Registered Nov. 10, 1931. BULOVA WATCH COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

NANETTE

FOR BRACELETS.
Claims use since on or about April 1930.

Reg. No. 313,905. Registered June 12, 1934. THE WILLIAMS AND ANDERSON COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

FOR JEWELRY FOR PERSONAL WEAR OR ADORNMENT, NOT INCLUDING WATCHES.
Claims use since Jan. 10, 1934.

Reg. No. 327,332. Registered Aug. 20, 1935. A. MICALLEF & COMPANY, Providence, R. I. Republished by A. Micallef & Company (1946), Providence, R. I., a partnership.

AoM

FOR JEWELRY FOR PERSONAL WEAR NOT INCLUDING WATCHES.
Claims use since Apr. 2, 1935.

Reg. No. 369,134. Registered July 18, 1939. HARRY C. SCHICK, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

FOR NECKLACE CLASPS AND SNAPS AND OTHER ARTICLES OF JEWELRY, NOT INCLUDING WATCHES, MADE OF PLATINUM, GOLD, ROLLED AND FILLED GOLD, AND STERLING SILVER.
Claims use since Mar. 1, 1938.

Reg. No. 431,973. Registered Aug. 12, 1947. COLONIAL MFG. CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

MAGNIFIED

FOR JEWELRY FOR PERSONAL WEAR OR ADORNMENT—NAMELY, FINGER RINGS, EARRINGS, BROOCHES, BRACELETS, NECKLACES, JEWELRY CLIPS, AND LOCKETS.
Claims use since January 1942.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 362,669. Registered Nov. 29, 1938. G. N. COUGHLAN CO., Orange, N. J., a corporation of New Jersey. Republished by registrant, present location West Orange, N. J.

Easy-Aid

FOR PEA SHELLERS, KITCHEN SHEARS, JAR OPENERS, EGG SLICERS, PIE AND CAKE SERVERS, PARING KNIVES, GRAPEFRUIT KNIVES, SLICING KNIVES, EGG SLICER FRAMES, POT HOLDERS, BREAD KNIVES, CAN OPENERS, ICE PICKS, CAKE TURNERS, WIRE FORKS, BASTING SPOONS, SCOOPS, SALAD BALLERS, CORER AND PARERS, POTATO MASHERS, BATTER WHIPS, GRATERS, MIXING SPOONS, PLATE SCRAPERS, VEGETABLE SERVERS, VEGETABLE BRUSHES, VEGETABLE MASHERS, KITCHEN FORKS.
Claims use since July 22, 1935.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 339,491. Registered Oct. 13, 1936. NATIONAL ALUMINATE CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

NALCOLITE

FOR BASE-EXCHANGING MINERALS, SUCH AS THE COMPOUND SILICO-ALUMINATES OF THE ALKALINE METALS KNOWN AS ZEOLITES, EMPLOYED IN THE TREATMENT OF WATER SUCH AS FOR SOFTENING.
Claims use since Mar. 23, 1936.

Reg. No. 423,606. Registered Sept. 3, 1946. ALLIED STORES CORPORATION, Wilmington, Del., Seattle, Wash., Syracuse, N. Y., and Paterson, N. J., a corporation of Delaware. Republished by registrant, present location New York, N. Y.

AMBASSADOR

FOR REFRIGERATORS AND HOME FREEZERS.
Claims use since Nov. 26, 1945.

Reg. No. 432,694. Registered Sept. 9, 1947. NORTH BROTHERS MANUFACTURING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

"LIGHTNING"

FOR ICE CREAM FREEZERS, BOTH HAND AND MECHANICALLY OPERATED AND DESIGNED FOR HOME AND COMMERCIAL USE.
Claims use since 1888.

CLASS 33

GLASSWARE

Reg. No. 220,558. Registered Nov. 9, 1926. ALBERT PICK & COMPANY, Chicago, Ill. Republished by Albert Pick Company, Inc., Chicago, Ill., a corporation of Delaware.

Dur-Nok

FOR GLASS TUMBLERS.
Claims use since May 15, 1926.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 190,984. Registered Oct. 28, 1924. WOLF SAFETY LAMP CO. OF AMERICA, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

WOLF

FOR SAFETY LAMPS, CARBIDE CAP LAMPS, CARBIDE HANDLAMPS.
Claims use since September 1913.

Reg. No. 351,534. Registered Nov. 2, 1937. ALLIED STORES CORPORATION, Wilmington, Del., and Seattle, Wash., a corporation of Delaware. Republished by registrant, present location New York, N. Y.

allied

FOR HEATING AND COOKING STOVES, RANGES, AND HEATING FURNACES USING GAS, COAL, COKE, WOOD, OR OIL AS FUEL.
Claims use since Nov. 2, 1936.

Reg. No. 401,526. Registered May 25, 1943. PETRO-CHEM DEVELOPMENT COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

ISO-FLOW

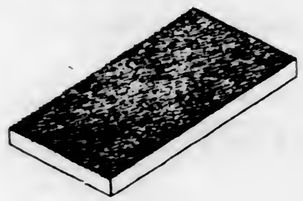
The word "Flow" is disclaimed apart from the mark as shown.
FOR FLUID BURNING FURNACES.
Claims use since May 9, 1940.

Reg. No. 418,091. Registered Dec. 4, 1945. CALUMET AND HECLA CONSOLIDATED COPPER COMPANY, Boston, Mass., a corporation of Michigan. Republished by registrant.

TRUFIN

FOR FINNED TUBING FOR USE AS A HEAT EXCHANGING ELEMENT.
Claims use since Aug. 1, 1944.

CLASS 35



BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Reg. No. 171,509. Registered Aug. 7, 1923. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Bonbon

FOR FLAT AND ROUND LEATHER BELTING.
Claims use since Sept. 10, 1920.

Reg. No. 191,200. Registered Nov. 4, 1924. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

The representation of the goods is disclaimed apart from the mark as shown.
FOR FLAT AND ROUND LEATHER BELTING.
Claims use since about March 1921.

Reg. No. 197,614. Registered Apr. 21, 1925. GREENE, TWEED & Co., New York, N. Y., a corporation of New York. Republished by registrant.

Runwel

FOR PACKINGS FOR WEARING AND BEARING PARTS OF MACHINERY AND MECHANICAL DEVICES, BEING MADE OF ASBESTOS YARN LUBRICATED WITH A GRAPHITE GREASE LUBRICANT.
Claims use since April 1921.

Reg. No. 199,418. Registered June 9, 1925. CHARLES BOND COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Bondex

FOR FLAT AND ROUND BELTING.
Claims use since December 1923.

Reg. No. 227,361. Registered May 3, 1927. ASBESTOS MANUFACTURING COMPANY, Huntington, Ind., a corporation of Indiana. Republished by registrant.

Amco

FOR ASBESTOS BRAKE LININGS, ASBESTOS BRAKE BLOCKS, ASBESTOS CLUTCH FACINGS, AND ASBESTOS DISKS.
Claims use since May 1, 1925.

Reg. No. 253,531. Registered Feb. 26, 1929. GREENE, TWEED & Co., New York, N. Y., a corporation of New York. Republished by registrant.

CUTNO

FOR PACKING FOR STUFFING BOXES THAT COME IN CONTACT WITH A FLUID CONTAINING CAUSTIC SODA OR OTHER CHEMICAL OF AN ALKALI NATURE.
Claims use since Oct. 1, 1928.

Reg. No. 253,532. Registered Feb. 26, 1929. GREENE, TWEED & Co., New York, N. Y., a corporation of New York. Republished by registrant.

PELRO

FOR PACKING FOR USE IN STUFFING BOXES THAT COME IN CONTACT WITH GASOLINE, ALCOHOL, NAPHTHA, AND OTHER DISTILLATES OF PETROLEUM.
Claims use since Oct. 1, 1928.

Reg. No. 282,191. Registered Apr. 14, 1931. KIRKHILL RUBBER CO., Los Angeles, Calif., a corporation of California. Republished by registrant.

PIGNOSE

FOR RUBBER WASHERS FOR FAUCETS.
Claims use since on or about Jan. 2, 1927.

Reg. No. 315,529. Registered July 31, 1934. GREENE, TWEED & CO., New York, N. Y., a corporation of New York. Republished by registrant.

KLERO

FOR PACKING FOR WEARING AND BEARING PARTS OF MACHINERY CONSISTING OF COTTON IMPREGNATED WITH A LUBRICANT.
Claims use since Mar. 1, 1934.

Reg. No. 390,719. Registered Sept. 30, 1941. DARLING VALVE & MANUFACTURING COMPANY, Williamsport, Pa., a corporation of Pennsylvania. Republished by registrant.

PUMCUP

FOR FABRIC CUPS FOR USE IN OIL WELLS AND PUMPS.
Claims use since May 6, 1941.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Reg. No. 397,920. Registered Sept. 29, 1942. ALBERT W. SISK & SON, Preston, Md., a firm. Republished by registrant.

CHIEF COOK

FOR CANNED TOMATOES.
Claims use since February 1906.

Reg. No. 398,946. Registered Dec. 8, 1942. FRUIT GROWERS CO-OPERATIVE, Sturgeon Bay, Wis., a corporation of Wisconsin. Republished by registrant.

Hi-Dee-Ho

FOR CANNED CHERRIES.
Claims use since Oct. 30, 1940.

Reg. No. 399,854. Registered Feb. 2, 1943. FINE FOODS, INC., Seattle, Wash., a corporation of Washington. Republished by registrant.

FOR FOOD PRODUCTS—NAMELY, FRESH DECIDUOUS FRUITS, FRESH CITRUS FRUITS, FRESH BERRIES AND FRESH VEGETABLES.
Claims use since Apr. 9, 1925.

Reg. No. 402,363. Registered July 13, 1943. ROPER BROS., INC., Winter Garden, Fla., a corporation of Florida. Republished by registrant.

Molly Pitcher

FOR CANNED FRUITS AND VEGETABLES.
Claims use since Nov. 10, 1942.

Reg. No. 405,779. Registered Feb. 22, 1944. WM. T. CROWTHER & SON, INC., Boston, Mass. Republished by Wm. T. Crowther & Son, Inc., Boston, Mass., a corporation of Massachusetts, assignor to Massachusetts Canning Corporation, Boston, Mass., a corporation of Massachusetts.

BOMBO

FOR DOG FOOD.
Claims use since July 1, 1943.

Reg. No. 406,455. Registered Apr. 4, 1944. HAPPY MILLS, Memphis, Tenn., a firm. Republished by registrant.

CHEERFUL

FOR MIXED FEEDS FOR LIVESTOCK AND POULTRY.
Claims use since May 1, 1929.

Reg. No. 409,592. Registered Oct. 10, 1944. PACIFIC GAMBLE ROBINSON COMPANY, Seattle, Wash., a corporation of Delaware.

The words "Cinnamon Roast" and "Flavor" are disclaimed apart from the mark as shown.
FOR COFFEE.
Claims use since Mar. 9, 1944.

Reg. No. 418,333. Registered Dec. 18, 1945. ALBERT W. SISK & SON, Preston, Md., a firm. Republished by registrant.

CONFIDENCE

FOR CANNED VEGETABLES.
Claims use since 1911.

Reg. No. 418,681. Registered Jan. 8, 1946. GEORGE WESTON LIMITED, Passaic, N. J. Republished by Weston Biscuit Company Inc., Passaic, N. J., a corporation of Delaware.

George Inn

FOR COOKIES.
Claims use since 1933.

Reg. No. 420,304. Registered Apr. 2, 1946. COBB CANNING COMPANY, Cobb, Wis., a corporation of Wisconsin. Republished by registrant.

Pa's Pick

FOR CANNED PEAS.
Claims use since Aug. 21, 1945.

Reg. No. 421,465. Registered June 4, 1946. GEORGE WESTON, LIMITED, Passaic, N. J. Republished by Weston Biscuit Company Inc., Passaic, N. J., a corporation of Delaware.

Weston's

FOR BAKERY PRODUCTS—NAMELY, CRACKERS, COOKIES, BISCUITS AND WAFERS.
Claims use since 1887.

Reg. No. 429,837. Registered May 20, 1947. BROLITE COMPANY, Chicago, Ill., a co-partnership. Republished by registrant.

BROLITE

FOR CULTURE PREPARATION, THE PRINCIPAL INGREDIENTS OF WHICH ARE FLOUR, BUTTER, BUTTERMILK, WATER, SYRUP, MONO CALCIUM PHOSPHATE, SODIUM BICARBONATE, CERELOSE, SALT, NON-FAT, DRY MILK SOLIDS AND YEAST, AND THE PRODUCT IS ADDED TO BATCHES OF BAKERY GOODS IN WHICH FLOUR IS THE PRINCIPAL INGREDIENT, TO IMPROVE THE QUALITY AND FLAVOR OF THE BAKERY GOODS MADE THEREFROM.
Claims use since Nov. 1, 1929.

Reg. No. 432,250. Registered Aug. 26, 1947. SANTA CLARA FROSTED FOODS CO., Santa Clara, Calif., a corporation of California. Republished by registrant.

FOR FROZEN FRESH FRUITS, FROZEN FRESH VEGETABLES.
Claims use since Nov. 15, 1945.

CLASS 47

WINES

Reg. No. 343,000. Registered Mar. 9, 1937. BERINGER BROS., INC., St. Helena, Calif., a corporation of Nevada. Republished by registrant.

FOR WINES.
Claims use since 1876.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 114,576. Registered Dec. 19, 1916. JAMES THOMPSON & BRO., Louisville, Ky. Republished by Glenmore Distilleries Co., Owensboro, Ky., a corporation of Delaware.

FOR WHISKEY.
Claims use since Feb. 6, 1903.

Reg. No. 307,371. Registered Oct. 24, 1933. LANG BROTHERS, LIMITED, Glasgow, Scotland, a corporation of Great Britain. Republished by registrant.

All of the words appearing on the drawing are disclaimed except "The Aberfoyle" and the corporate name of the applicant.
FOR WHISKEY.
Claims use since May 17, 1881.

Reg. No. 308,126. Registered Nov. 21, 1933. LANG BROTHERS, LIMITED, Glasgow, Scotland, a corporation of Great Britain. Republished by registrant.

FOR WHISKEY.
Claims use since Dec. 30, 1880.

Reg. No. 309,162. Registered Jan. 2, 1934. LANG BROTHERS, LIMITED, Glasgow, Scotland, a corporation of Great Britain. Republished by registrant.

The word "Whisky" is disclaimed apart from the mark as shown.
FOR WHISKEY.
Claims use since Oct. 12, 1908.

Reg. No. 311,557. Registered Mar. 27, 1934. LANG BROTHERS, LIMITED, Glasgow, Scotland, a corporation of Great Britain. Republished by registrant.

All the writing appearing on the drawing is disclaimed except "Lang Brothers" and the initials "L B W."
FOR WHISKEY.
Claims use since Nov. 17, 1928.

Reg. No. 351,382. Registered Oct. 26, 1937. LANG BROTHERS, LIMITED, Glasgow, Scotland, a corporation of Great Britain. Republished by registrant.

The words "Liqueur" and "Whisky" are disclaimed apart from the mark as shown.
FOR WHISKEY.
Claims use since Oct. 12, 1908.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 253,798. Registered Mar. 5, 1929. THE SPEEDAUMATIC COMPANY, Chicago, Ill., now by change of name Speedaumat Addressing Machinery, Incorporated, assignor to Speedaumat Manufacturing Company, Chicago, Ill. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Speedaumat

FOR PRINTING PLATES FOR ADDRESSING AND SIMILAR MACHINERY, EMBOSSING MACHINES, ADDRESSING MACHINES, MAILING MACHINES, AND GALLEY TRAYS.
Claims use since 1919.

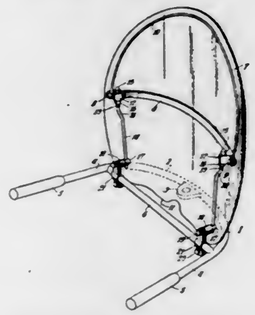
Reg. No. 399,318. Registered Dec. 29, 1942. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

ADDRESSOcote

FOR PRINTING DEVICES FOR USE IN ADDRESSING AND SIMILAR MACHINES—NAMELY, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE ALONE, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE IN FRAMES, AND FRAMES FOR SAID PLATES.
Claims use since on or about Nov. 22, 1938.

REISSUES

SEPTEMBER 21, 1948



23,039

MOTORCYCLE WINDSHIELD

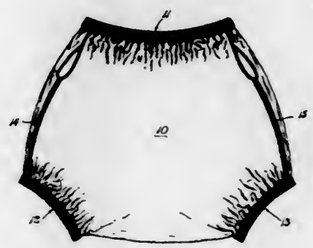
Anthony Thomas Comiskey, Sr., Chicago, Ill.

Original No. 2,396,493, dated March 12, 1946, Serial No. 595,401, May 23, 1945. Application for reissue February 15, 1947, Serial No. 728,776

9 Claims. (Cl. 296—78.1)

6. In a motorcycle windshield, a transparent, transversely curved screen, a brace extending across and secured to the back of said screen adjacent the middle portion thereof intermediate its top and bottom edges, a pair of supporting rods respectively having their upper end portions secured to said brace adjacent the side edges of said screen, said supporting rods depending from said brace in inwardly spaced relation to said edges of the screen and respectively having lower end portions engageable with clamps for securing the windshield to the handle bar structure of a motorcycle, the portions of said supporting rods intermediate said brace and said lower end portions being free of said screen and exposed but located in proximity to the back of said screen, the latter extending downwardly from said brace for substantially the entire lengths of said exposed supporting rod portions so as to thereby protect the same, said screen being of substantially self supporting rigidity and being supported from the handle bar structure mainly by said supporting rods and brace.

23,040



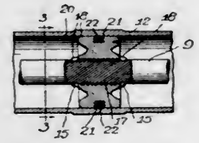
BABY PANTS

Le Roy H. Rand, Brooklyn, N. Y., assignor to Rand Rubber Company, Brooklyn, N. Y., a corporation of New York

Original No. 2,397,751, dated April 2, 1946, Serial No. 580,281, February 28, 1945. Application for reissue August 1, 1946, Serial No. 687,561

7 Claims. (Cl. 128—288)

1. Baby pants comprising a body portion of synthetic film material, a body opening, an elastic band stitched to said body opening with thread, said film being compounded of vinyl resin, plasticizer, calcium stearate, stearic acid, pigment, a silica gel, said film and said stitching cooperating to provide a relatively strong joint capable of withstanding repeated washings and ironings.



23,041

PISTON AND PISTON ROD ASSEMBLY

Thomas R. Smith, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a corporation of Delaware

Original No. 2,361,244, dated October 24, 1944, Serial No. 479,077, March 13, 1943. Application for reissue July 19, 1945, Serial No. 605,961

11 Claims. (Cl. 309—17)

5. A piston and piston rod assembly comprising a piston rod having spiral grooves formed on an intermediate portion thereof, a piston provided with an opening having spiral grooves formed in its inner diameter and mating with the groove formed on the rod, a spiral key spring adapted to be threaded into the grooves on the piston rod and to receive the grooves in the piston for connecting the latter onto the rod, and means for locking the opposite sides of the piston to the piston rod and thereby form a unitary assembly.

PLANT PATENTS

GRANTED SEPTEMBER 21, 1948

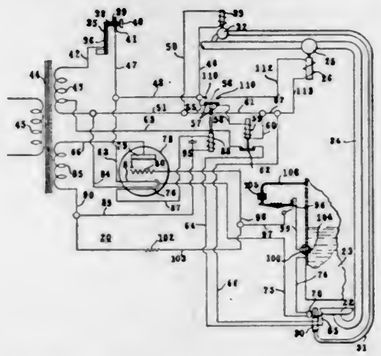
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

806
ROSE PLANT
Peter Mordigan, San Fernando, Calif., assignor to The Conard-Pyle Company, West Grove, Pa., a corporation of Pennsylvania
Application February 26, 1947, Serial No. 731,022
1 Claim. (Cl. 47—61)

A new and distinct variety of hybrid tea rose plant characterized as to novelty by the extremely rare yellow color of its flowers on an unusually vigorous, well branched and well foliaged plant, substantially as shown and described.

807
IVY PLANT
Joseph Bach, Des Moines, Iowa
Application April 19, 1947, Serial No. 742,665
1 Claim. (Cl. 47—59)

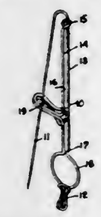
A new and distinct variety of ivy plant, as herein shown and described, characterized particularly by its compact, branching growth; and by the conspicuous variegated coloring of its leaves, comprising a marginal area of a shade of white surrounding an area of grey-green having a contour of similar shape to that of the leaf and containing angular splashes of dark green.



PATENTS

GRANTED SEPTEMBER 21, 1948

2,449,537
RECOVERY OF ACIDIC GASES
Arthur W. Hixson, Leonia, N. J., and Ralph Miller, New York, N. Y., assignors to The Chemical Foundation, Incorporated, a membership corporation of New York
No Drawing. Application July 12, 1946, Serial No. 683,154
12 Claims. (Cl. 23—178)

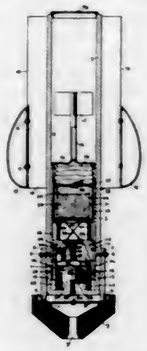


11. In a process for recovering sulfur dioxide from sulfur dioxide-containing gases the steps of adding solid sodium acid fluoride to a solution of ammonium bisulfite under conditions regulated to evolve sulfur dioxide and form solid sodium fluoride and a solution containing ammonium fluoride, recovering the evolved sulfur dioxide, separating the solid sodium fluoride from the solution containing the said ammonium fluoride, partially evaporating the said solution to vaporize water and ammonia and form a solution containing ammonium fluoride, recovering the vaporized ammonia, contacting the said ammonia with sulfur dioxide-containing gas in the presence of water to form an additional quantity of an ammonium bisulfite solution, contacting the solution containing the acid fluoride with solid sodium fluoride to reform the solid sodium acid fluoride and a fluoride solution of diminished acidity, separating the solid sodium acid fluoride from the fluoride solution and returning the said solution to the evaporation operation.

2,449,538
CONTROL APPARATUS
Harold S. Ackerman, Dayton, Ohio, assignor to Hubbard and Company, Pittsburgh, Pa., a corporation of Pennsylvania
Original application November 19, 1940, Serial No. 366,281. Divided and this application July 27, 1943, Serial No. 496,359
5 Claims. (Cl. 122—504)

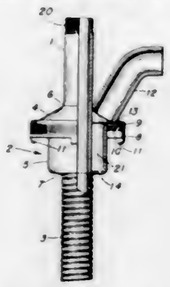
4. In combination, a main fuel burning means; a tank containing water heated by the main fuel burning means; electrically operated means for controlling the supply of fuel to the main fuel burning means, said electrically operated means including an electric circuit; an electric tube including a cathode, plate and a grid, said cathode and plate being connected in said circuit; means for heating the cathode; means forming a second electrical circuit for controlling the voltage on the grid, said second mentioned circuit including a terminal disposed at a selected minimum water level of the tank and adapted to contact the water at said level, an electrical conductor connected through the tank with the water and through the water in the tank with the terminal when the water contacts said terminal, and a pair of additional electric circuit controlling devices also interposed in said second circuit, one of said electric circuit controlling devices comprising a switch and the other electric circuit controlling device comprising an element having a very high electrical resistance at atmosphere temperatures and decreasing the resistance when heated; means responsive to pressure in the tank for operating the switch; and means comprising a pilot fuel burning means for heating the other electric circuit controlling device.

2,449,539
NECKTIE SECURING DEVICE
Harry R. Birdsell, Cleveland, Ohio
Application February 16, 1945, Serial No. 578,191
4 Claims. (Cl. 24—60)



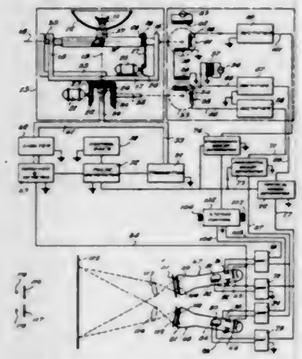
1. A tie securing device, comprising an elongated body part having a piercing tongue which, when the device is in use, is secured to the upper end of the body part, and a guard and holder for the tongue point mounted on its lower end, said tongue when closed in the guard lying close to the body to reduce thickness and bulk, said body part being formed to provide two parallel arms spaced apart and adapted to embrace and to receive in the slot between them the shank of a shirt button, said arms being joined to close the slot at its upper ends and also having outwardly extending portions at their lower ends forming a button-receiving eye, the opening in which communicates with the lower end of said slot by way of a restricted gateway, whereby, when the device is secured to the rear face of a tie in closed and in vertical position with said eye at its lower end, a shirt button may be passed through said eye and through the restricted gateway to a position in said slot in which it is then releasably confined against escape through the closed upper end of said slot.

2,449,540
AIRCRAFT FLARE
Joseph Albin, New York, N. Y.
Application June 9, 1942, Serial No. 446,364
18 Claims. (Cl. 102—35.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



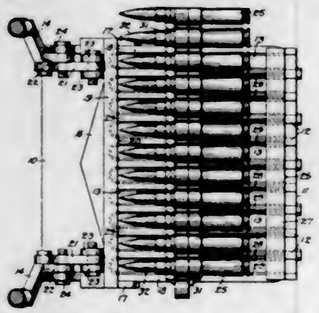
14. In a missile, a projector tube, a flare case fitting said tube, a candle and attached aerial

suspension means in said case, propelling charge means in said tube, means responsive to impact of said missile to detonate said propelling charge means and thereby project said case upwardly for a predetermined time, and explosive means in



said case including a time train adapted to be ignited by said propelling charge means, to expel said candle and suspension means from said case at the end of a time determined by said time train, and simultaneously to ignite said candle.

2,449,541
DISCHARGE NOZZLE
Anthony Peter Arno, United States Navy
Application August 2, 1945, Serial No. 608,548
1 Claim. (Cl. 226—66)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

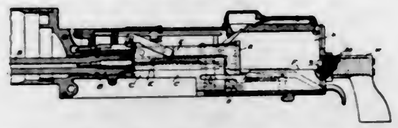


A container filling discharge nozzle comprising a main line, a flexible discharge hose secured to one end of said main line, cap means axially disposed about said main line and secured thereto, said cap means comprising a hub member having an overflow vent therein and a cup-shaped member with a flange portion abutting against said hub member to form a leak-proof chamber within said cap means, means secured to said cap means arranged to cooperate with the inlet of a container being filled to attach said cap means to the inlet, said cup-shaped member having a bottom wall extending a substantial distance below said inlet securing means, said bottom wall having a plurality of openings therethrough providing a fluid escape passage to said chamber and through said overflow passage, whereby the filling of the cointainer is limited to a level below its inlet determined by the depth of said cup-shaped member and thus provide a reservoir to drain the nozzle without overflowing while said nozzle is being removed.

2,449,542
RADIO OBJECT LOCATING DEVICE FOR PRODUCING STEREOSCOPIC IMAGES
Waldemar A. Ayres, Kew Gardens Hills, and Edward C. Streeter, Jr., Old Westbury, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application August 14, 1943, Serial No. 498,606
19 Claims. (Cl. 343—10)

3. In stereoscopic apparatus, a locator for determining the position of an object and the distance of said object from a surface, an indicator actuated by said locator for providing dual images of the position of said object, means for laterally separating said images according to said distance, and means for combining an image of said surface with said dual images.

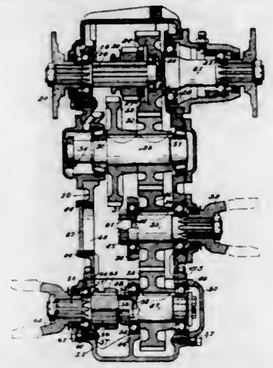
2,449,543
LINK BELT UNLOADER
Arnold Baker, New Haven, Conn.
Application March 1, 1944, Serial No. 524,576
1 Claim. (Cl. 86—48)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A link belt unloader for use with a link belt loader having a support for the rounds and links, means for urging the rounds rearwardly longitudinally on the support, and abutment means on the support rearwardly of the rounds, comprising a removable crossbar adapted to be positioned on said support against said abutment and having secured to the underside thereof a plurality of planiform vertical parallel plates extending at right angles to said bar and arranged to extend between the rounds with their front ends in position to engage the links and strip them from the rounds when said rounds are moved rearwardly, said crossbar being provided with means adjacent its ends for engaging said support to prevent lateral movement of the crossbar relative thereto and maintain the alignment of the plates between the rounds.

2,449,544
SPARE TIRE CARRIER ATTACHMENT FOR TRUCKS
Dana R. Ballard, Madera, Calif.
Application August 26, 1946, Serial No. 693,043
1 Claim. (Cl. 224—29)

In a tire carrier, a first channel and a second channel for attaching the carrier to truck frame, a bolt pivotally connected to the first channel, a bar having an aperture through which the bolt passes, the bar having a second aperture, a second bolt passing through the second aperture, a plate having an aperture through which the second bolt passes, arms attached to the plate, angle irons pivotally supporting the arms, and means supported by the angle irons to lock the arms in a raised position.



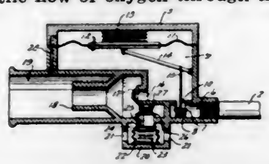
2,449,545
BREECH BLOCK RETURN MEANS FOR THE BROWNING MACHINE GUN
Charles E. Balleisen, Philadelphia, Pa.
Application January 25, 1945, Serial No. 574,600
2 Claims. (Cl. 89—199)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a machine gun, a breech casing having a forward and a rearward portion, a barrel movably mounted in the forward portion of the breech casing, a buffer means mounted in the rearward portion of the breech casing, a breech-bolt slidably mounted in said casing independently of said barrel and buffer means, said breech-bolt being freely movable rearwardly from said barrel on recoil toward the rearward portion and forwardly on counter-recoil away from the rearward portion towards the barrel, said barrel and said buffer means forming the limits of travel of said breech-bolt, said breech-bolt striking against said elastic buffer means on recoil and rebounding from said means in counter-recoil into cooperative relationship with said barrel, said buffer means being the sole means for absorbing the shock of recoil of the breech-bolt by arresting recoil movement thereof and for returning the breech-bolt to cooperative relationship with said barrel by imparting counter-recoil movement to the breech-bolt.

2,449,546
POWER TRANSMITTING MECHANISM
Lawrence R. Buckendale, Detroit, Mich., and Beverly W. Keese, Oshkosh, Wis., assignors to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application January 24, 1944, Serial No. 519,508
11 Claims. (Cl. 74—343)

1. Power transfer mechanism for spaced vehicle driving axles, comprising a fixed housing structure, power output shafts for the respective axles, one of said shafts being operatively supported in one side wall of the housing structure, power transmission gearing for said shafts within the housing, means for operatively connecting said gearing with a source of power, the opposite side wall of the housing structure being

provided with spaced openings in axial alignment with said one power output shaft and with one of the transmission gear elements respectively, said openings removably receiving the other power output shaft and means for releasably establishing a driving connection between said gear element and the latter shaft or between the aligned output shafts.



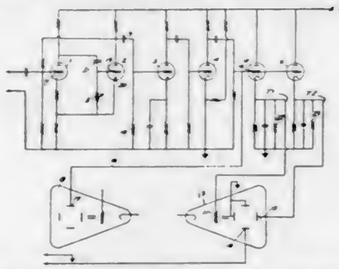
2,449,547
LUBRICATING OIL ADDITION AGENT
Gordon D. Byrkit, Niagara Falls, N. Y., assignor, by mesne assignments, to The Lubrizol Development Corporation, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application October 21, 1942, Serial No. 462,837
10 Claims. (Cl. 260—408)

1. As a hydrocarbon lubricating oil improving agent, a halogen-bearing synthetic material obtained by the condensation of a homogeneously halogenated waxy ester with an anhydrous metal salt of a carboxylic acid, said waxy ester being selected from the class consisting of naturally occurring solid and semi-solid waxy esters and synthetic carboxylic acid solid and semi-solid waxy esters, said homogeneously halogenated waxy ester containing a uniform number of halogen atoms per molecule, and said condensation reaction being carried out with an amount of the anhydrous metal salt insufficient to replace all of the halogen in said homogeneously halogenated waxy ester.

2,449,548
AUTOMATIC CONTROL SYSTEM FOR HIGH ALTITUDE PRESSURE SUITS
Henry L. Burns, Yellow Springs, Ohio
Application January 3, 1946, Serial No. 638,902
6 Claims. (Cl. 128—144)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An automatic pressure control system for high altitude flying comprising a pressure suit, a source of oxygen supply having a constant preregulated pressure flow, means for automatically regulating said pressure flow including a differential pressure responsive actuating means in opposing fluid pressure communication with the

source of oxygen supply and the pressure suit, and means mounted in said pressure suit for regulating the pressure within said pressure suit in accordance with the various altitudes and to maintain a constant pressure at a preselected altitude in altitudes higher than the preselected altitude whereby the flow of oxygen through the pressure



suit is controlled in accordance with the differential pressure acting on said pressure responsive actuating means by pressure in said pressure suit as determined by the suit pressure regulating means and the oxygen supply pressure to sufficiently supply oxygen to a wearer of the pressure suit in all altitudes.

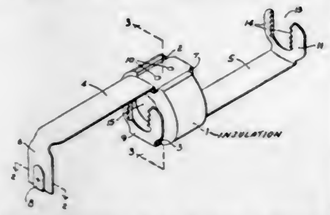
2,449,549

SWEEP CIRCUIT FOR CATHODE-RAY TUBES

Maurice E. Byrne, United States Army, Lewiston, Idaho

Application September 14, 1943, Serial No. 502,271
5 Claims. (Cl. 315—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an oscilloscope circuit, a generator of square wave electrical impulses, means for variably controlling the duration of said square wave impulses, a circuit means for generating short electrical impulses at the beginning and end of each of said square wave impulses, a first tuned circuit and a second tuned circuit tuned to a frequency different from said first tuned circuit, means for applying at least one of said short pulses to said first and second tuned circuits whereby said tuned circuits are shocked into oscillation, and a cathode ray tube, of which the grid is connected to said first tuned circuit and one set of deflecting plates is connected to said second tuned circuit.



2,449,550

BATTERY ADAPTER

Robert L. Eichberg, Arlington, Va., and Homer R. Montague, Washington, D. C.

Application November 23, 1944, Serial No. 564,890
3 Claims. (Cl. 136—173)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A battery adapter for holding a plurality of cells in parallel electrical connection having in combination a short solid cylindrical mounting member of relatively stiff and inflexible insulating material and having an axial bore therethrough, a pair of electrically conducting straps, each of said straps having an end thereof mounted on an opposite face of said cylindrical member, one end of each of said straps being bent over an end of said cylindrical member, said strap

ends being formed with a slot therein aligned with the bore of said cylindrical member, said slot being bordered with upstanding teeth, the other end of each of said straps being bent over and provided with a raised channel to receive the center electrode of a dry cell, the four bent over ends lying along a common axis.

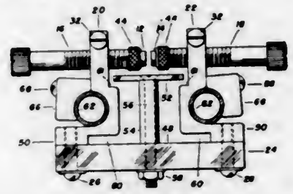
2,449,551

TELESCOPE MOUNT

John C. Garand, Springfield, Mass., assignor to the United States of America as represented by the Secretary of War

Application June 1, 1945, Serial No. 597,052
3 Claims. (Cl. 33—50)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a firearm, in combination, a barrel having a longitudinal groove therein, a sight base having a substantially semi-cylindrical concave surface shaped to snugly engage said barrel, an inwardly projecting tooth on said sight base engageable in said barrel groove to angularly position said sight base thereon, said sight base having a transverse hole therethrough whereby an aligned hole may be produced in said barrel by utilizing said transverse hole as a jig, and an expanded dowel pin communicating between said aligned holes.



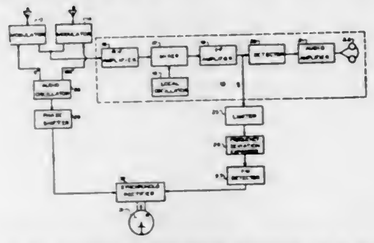
2,449,552

SPARK GAP

John E. Gorham, Spring Lake, and Harold A. Zahl, Long Branch, N. J.

Application January 14, 1943, Serial No. 472,353
14 Claims. (Cl. 250—38)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A spark gap assembly comprising an insulation base, spaced brackets mounted thereon, electrodes carried by said brackets, a sputter plate disposed between said base and the adjacent ends of said electrodes, and a post supporting said sputter plate on said base, said sputter plate serving to prevent the accumulation of a continuous layer of sputtered metal on said base between said brackets, and the base portion of said brackets being so shaped or undercut as to further shield said insulation base against sputtered metal.



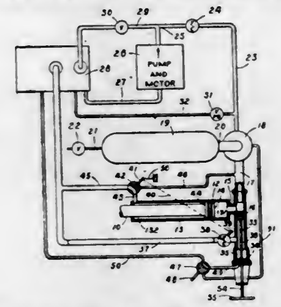
2,449,553

RADIO COMPASS

Paul G. Hansel, Red Bank, N. J.

Application September 14, 1945, Serial No. 616,442
1 Claim. (Cl. 343—121)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A radio system comprising a plurality of spaced, non-directional aerials, a low-frequency sine-wave oscillator for independently modulating in opposite phase the respective outputs of said aerials, means for combining the modulated waves to derive a resultant phase-modulated wave, a signal-monitoring channel and a compass channel excited in parallel by said resultant wave, said compass channel comprising means for limiting the amplitude and expanding the degree of phase modulation of said resultant wave, a frequency-modulation detector connected to the output of said last named means for deriving a sine wave having a frequency equal to that of the output of said oscillator and a phase relative to said output which is dependent upon the direction and sense of arrival of the received wave, means to shift the phase of the output of said oscillator 90° to derive a second sine wave, a synchronous rectifier energized by said sine waves for deriving a direct current having a polarity and magnitude dependent upon the phase relation of said sine waves, and a polarized direct-current indicator energized by said current.



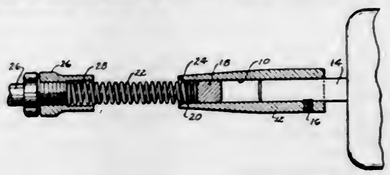
2,449,554

HYDROPNEUMATIC ACCUMULATOR TYPE POWER PLANT WITH DIFFERENTIAL SPEED MOTOR

Carlyle L. Helber, United States Navy, and Frederick B. Gross, Langley, Va.

Application April 19, 1938, Serial No. 202,898
2 Claims. (Cl. 60—51)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A power plant comprising a hydro-pneumatic accumulator, a power cylinder, a piston therein having a piston rod projecting from one end of the cylinder, said piston and rod dividing the cylinder into a large area, high power chamber, and a small area, low power chamber, a conduit of large cross-sectional area connecting the liquid space of the accumulator to the high power chamber to move the piston and piston rod at high speed and high power, a sump, a pump for delivering liquid from the sump to the accumulator to maintain a predetermined pressure therein, an exaust conduit connecting the high power chamber to the sump, a check valve in the exhaust conduit opening to permit flow from the sump to the

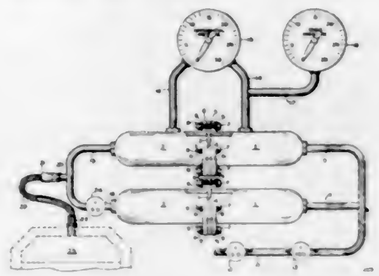


high power chamber, first valve means selectively operable to connect the high power chamber to the exhaust conduit or to the large area conduit, a passage of small cross-sectional area connecting the liquid space of the accumulator to the low power chamber, a large area passage connecting the low power chamber to the sump, second valve means selectively operable to connect the low power chamber to the small area passage or to the large area passage, and means responsive to movement of said second valve means to a position connecting the low power chamber to the small area passage for opening the check valve.

2,449,555

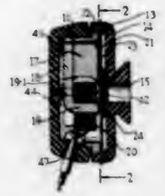
OVERLOAD RELEASE FLEXIBLE COUPLING

Werner B. Hopkins and Ture T. Oberg, Dayton, Ohio



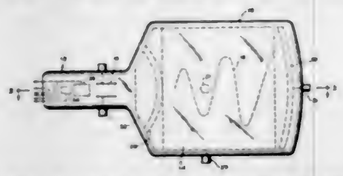
Application November 28, 1945, Serial No. 631,457
5 Claims. (Cl. 192—56)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A coupling of the character described adapted for a preselected direction of rotation, which comprises a driving member, a driven member normally coaxial with and axially spaced apart from said driving member, interfacing ends of said members being provided with cylindrically bored sockets, the socket of the driving member being of much less depth than the socket of the driven member and having a bellmouthed end, a coil spring formed of round wire, coiled to an outside diameter very slightly larger than the bore of said sockets and of a length to drivably connect said spaced apart driving and driven members when the end coils of said spring are contracted and seated in said sockets, the helix of



said spring being of such "hand" as will tend to enlarge the diameter of the spring when a load is applied thereto in said preselected direction of rotation, and the strength of the spring being such that a normal load applied in said preselected direction will enlarge the diameter of that part of the spring not contained in the sockets very slightly but a preselected overload applied in said preselected direction will enlarge the diameter of the spring to such an extent that the turns of the spring will press radially against the angle of the bellmouth and thereby remove the end of the spring from the driving member socket.

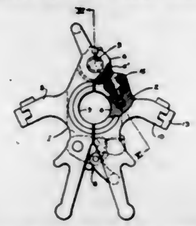
2,449,556
DIFFERENTIAL LEAKAGE INDICATOR
Henry B. Kirkley, Camden, N. J.
Application July 25, 1946, Serial No. 686,097
3 Claims. (Cl. 73—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. Apparatus for indicating leaks in an object, said apparatus comprising a conduit adapted to be connected at one end to the object and at the other end to a source of fluid under pressure, an obstruction in said conduit for restricting flow of fluid through said conduit, said obstruction having therethrough an orifice of small size compared with the size of the conduit, a differential-pressure gage connected to the conduit on opposite sides of said obstruction, and a static-pressure gage connected to the conduit on the side of said obstruction remote from the object.

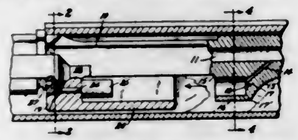
2,449,557
ELECTROMAGNETIC EARPHONE RECEIVER
William F. Knauert, Yonkers, N. Y., assignor to Sonotone Corporation, Elmsford, N. Y., a corporation of New York
Application February 4, 1944, Serial No. 521,007
5 Claims. (Cl. 179—114)

1. In a telephone receiver: a vibratory diaphragm having a generally circular periphery; a cover wall including a sound outlet duct and extending over the outer side of the diaphragm and forming with it an acoustic transmitting space; a relatively massive driving structure comprising a substantially-rigid aligning member having a continuous, generally-circular, outwardly-projecting rigid seating ridge of curved cross-section against which a peripheral region of the inner side of said diaphragm rests and an electro-acoustic transducing structure secured to said aligning member and located opposite the inner side of said diaphragm; said transducer structure embodying means for exerting unidirectional forces on the central region of said diaphragm and for inducing with electric oscillations of the principal audio-frequency range corresponding vibratory forces exerted on said central region of said diaphragm; said seating ridge having a raised circular surface region engaged by a peripheral region of said diaphragm spaced radially inwardly away from the outer edge thereof; said diaphragm being held pressed against said seating ridge and being maintained in an operative vibrating position thereon solely by the magnetic forces which are exerted on the central portion of said diaphragm; said raised circular surface region of said seating ridge being adjoined by depressed inner and outer circular regions thereof arranged to give the portion of said ridge facing said diaphragm a curved convex cross-section which is so shaped that a raised circular region of said seating ridge shall maintain engagement with a continuous peripheral region of the diaphragm throughout the normal range of the vibratory amplitudes thereof.



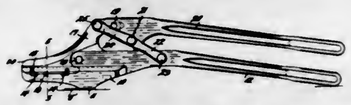
2,449,558
CATHODE-RAY TUBE
Harold H. Lanier, United States Navy, Langdale, Ala., and Robert E. Mueller, United States Navy, St. Louis, Mo.
Application December 14, 1945, Serial No. 635,120
18 Claims. (Cl. 250—164)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In the operation of the cathode ray tube including an electron gun and a fluorescent screen disposed parallel to the axis of the gun, the method of examining a wave form which includes accelerating electrons to form a beam extending generally parallel to and disposed somewhat behind the screen, and intermittently projecting a substantial length of the deflected beam laterally against the screen for observation.



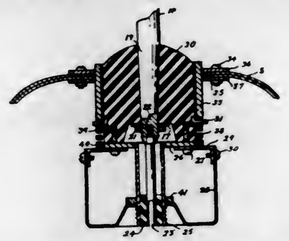
2,449,559
WELL PIPE ELEVATOR
Chester A. Lundeen, Los Angeles, Calif., assignor to Byron Jackson Co., Vernon, Calif., a corporation of Delaware
Application April 6, 1945, Serial No. 586,888
1 Claim. (Cl. 294—90)

In a well pipe elevator, a pair of pipe encircling members, means pivotally interconnecting said members for relative swinging movement into open and closed positions, a U-shaped frame pivotally mounted on one of said members, a roller journalled between the legs of said frame, resilient means urging said frame about its pivot to move said roller toward the axis of pivotal connection between said members and acting on said frame in line with said roller, said frame, roller, and resilient means being within the boundaries of and protected by said member, a cam on the other of said members comprising a portion concentric to the pivot axis of said members and a



portion extending in a direction having its major component radial to said axis, said latter portion being engageable with said roller when said members are in open position to yieldingly retain said members in open position, said latter portion of said cam being disposed and arranged to force said roller away from said axis against the action of said spring means upon application of a force of predetermined magnitude to said members in closing direction.

2,449,560
GAS OPERATION OF FIREARMS ACTION SLIDES
Samuel W. Marshall, Jr., United States Army
Application July 12, 1944, Serial No. 544,617
1 Claim. (Cl. 89—193)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

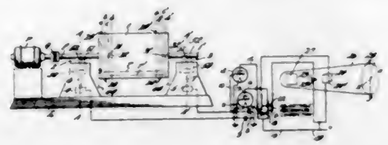


In a gun of the character described, a barrel having a bore terminating at its rear end in a cartridge chamber, a gas cylinder fixed with said barrel and parallel thereto adjacent said chamber, said cylinder having its rear end open, an operating slide guided for movement along said barrel in a rectilinear path parallel with said bore, said path having a greater length than said cylinder, a piston fixed to said slide in a position coaxial with said cylinder and adapted to enter said cylinder during the final portion of the forward travel of said slide, said piston having a loose gas-free fit in said cylinder, there being a first conical recess in the forward face of said piston and having a base diameter slightly less than the diameter of said piston whereby to leave an abutment ring on said face, there being a second conical recess in the forward end wall of said cylinder and having a smaller base diameter than said first recess, there being a rectilinear passageway in a plane containing the axes of said bore and cylinder and extending from the bore of said barrel, rearwardly at an acute angle to said bore and opening through the head of said cylinder outside the base circumference of said second recess, the apex angles of said recesses being of the order of 120°.

2,449,561
SHEAR
Francis L. McGary and Charles E. McGary, Hardinsburg, Ky.
Application October 3, 1944, Serial No. 556,968
6 Claims. (Cl. 30—251)

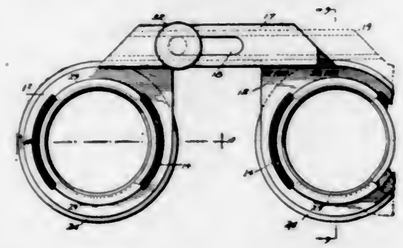
1. In a shear, a handle, a blade rigid with the handle, a blade pivotally connected to said handle and having a rearward extension, a toggle having pivotally connected links one of which is pivoted to said handle, the other one of said links being pivoted to a rearward extension of said second-named blade, and a handle pivotally mounted on the pivot between the links of the toggle, the last-named handle having a pin-and-slot connection with said rearward extension of the second-named blade.

2,449,562
ANTENNA
Allen S. Meier, Xenia, Ohio, assignor to the United States of America as represented by the Secretary of War
Application October 3, 1944, Serial No. 557,038
2 Claims. (Cl. 250—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



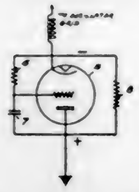
. 1. An antenna and mounting assembly, comprising in combination an antenna having a radially projecting flange spaced from the input end thereof, a socket into the bore of which said antenna is removably disposed with the antenna flange engaging one end thereof and having a frusto-conical outer surface, a dielectric mount that is apertured to receive and provide a mating seat for said socket, means for drawing said socket securely into the aperture in said mount, means engaging said socket for drawing the antenna flange tightly against the end of said socket that is contacted thereby and which means continues to provide an antenna contact, electrical conducting means upon which said mount is secured, and a case in electrical connection with the electrical connecting means and continuing to provide a contact therefor.

2,449,563
BALANCING MACHINE
Nicolai Minorsky, Bethesda, Md., assignor to Gyro-Balance Corporation, Greenwich, Conn., a corporation of Connecticut
Application May 4, 1943, Serial No. 485,656
3 Claims. (Cl. 29—1)



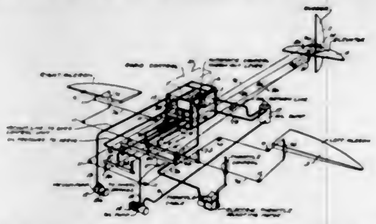
3. A method of balancing a rotor which comprises supporting said rotor at axially spaced

points, affixing weights to said rotor at points spaced from the axis and in a plurality of different planes which include the axis of rotation, rotating said rotor, obtaining a piezo-voltage at each of said points of support proportional to the pressure reactions due to unbalance at said points, amplifying said voltages and converting



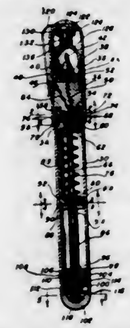
them into a combined visual image which exhibits both the magnitudes and directions of said forces, and selectively removing portions of said weights during rotation, and in accordance with said indication until said image narrows to a point, which corresponds to a state of balance of the rotor, all without interrupting the rotation thereof.

2,449,564
EYEPIECE ADAPTER
Andrew G. Mouisdale, Abingdon, and John N. Bruce, Baltimore, Md.
Application February 2, 1944, Serial No. 520,820
1 Claim. (Cl. 128—140)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



An adapter of the class described, comprising in combination: a bridge member having a lens-frame member extending below one end of said bridge member, the junction of said bridge member and said frame member being in extent substantially of the order of the radius of said frame member, a right-angle transverse edge at the other end of said bridge member, and a rearwardly projecting flange extending along each of the longitudinal margins of said bridge member: a companion bridge member having a companion lens-frame member positioned below the opposite end of said companion bridge member, and a pair of like flanges arranged to slidably interfit with said first-mentioned flanges; each of said bridge members being in extent substantially of the order of the diameter of said frame member; an indicia scale arranged along said opposite end of said companion bridge member for cooperation with said edge; and means for holding said bridge members in selective longitudinal adjustment with each other, said holding means being arranged for coaction with said scale and with said flanges to maintain rigid alignment and interpupillary distances between said frame members.

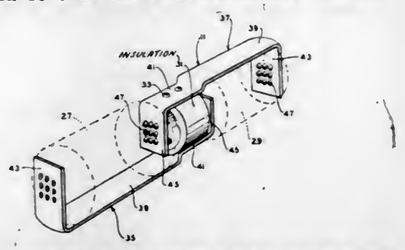
2,449,565
RADIO SYSTEM
John C. Noble, Bath Township, Greene County, and Ben F. Hardt, Dayton, Ohio
Application March 31, 1944, Serial No. 528,918
2 Claims. (Cl. 179—171.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In combination with a self-quenched oscillator, an amplitude modulator to produce random pulse signals by random triggering of the quench circuit of the oscillator, said modulator comprising a triode vacuum tube in the circuit between the grid of the oscillator and ground, and means to inject thermal noise voltages into the control grid of the tube.

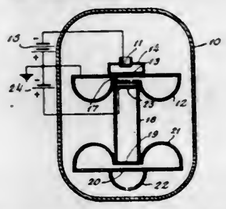
2,449,566
AIRCRAFT FLIGHT STABILIZING CONTROL UNIT AND SYSTEM
Charles L. Paulus, Dayton, Ohio
Application July 10, 1945, Serial No. 604,282
4 Claims. (Cl. 244—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a flight attitude determining unit for aircraft, a movable flight attitude controlling reference member, gyroscope means for determining the reference position of said movable flight attitude controlling reference member, a second flight attitude controlling reference member movable to and from a predetermined cooperating reference relation relative to the first-mentioned flight attitude controlling reference member, servo motor means having an actuated part adapted to be connected to a flight attitude controlling surface of an aircraft for actuation of the flight attitude control surface, a follow-up operating connection between said actuated part of the servo motor means and the second flight attitude controlling reference member constructed and arranged to move the second flight attitude controlling reference member in excess of the movement of the actuating part of the servo motor means, means normally operating the servo motor means in one direction when the first and second flight attitude controlling reference members are in said predetermined cooperating relation to each other to move the second flight attitude controlling reference member in one direction out of cooperative relation with respect to the first flight attitude controlling reference member, means operable while the first and second flight attitude controlling reference members are out of cooperative relation to each other to reversely actuate the servo motor means to actuate the follow-up connection to reversely move the second flight attitude controlling reference member back into cooperative controlling relation with the first flight attitude controlling reference member, whereby the second flight attitude controlling reference member and servo motor means are continuously oscillated back and forth relative to mean reference positions, relative to the position of the first flight attitude controlling reference member and the degree of oscillation of the second reference exceeds the degree of oscillation of the servo motor means.



2,449,567
FOUNTAIN PEN
Ludwig F. Perwas, Bronx, N. Y.
Application April 4, 1946, Serial No. 659,591
6 Claims. (Cl. 120—47)

1. In a fountain pen, the combination, which comprises, a tubular housing, plugs threaded in opposite ends of the housing, a head with a conical-shaped outer surface and having a socket in the end carried by the plug at the writing end of the housing, a conical-shaped pen point freely positioned in the socket of the head, resilient means urging the point outward to the writing position, means adjusting the pressure of the resilient means, a piston in the housing, a valve in the piston, a tubular piston rod extending from the piston through the plug in the opposite end of the housing, a cap on the outer end of the piston rod threaded on the plug through which the rod extends, and a tubular vent extending through the piston rod and to a point at the inner end of the head, said head having an outlet passage therethrough communicating with the said tubular vent.

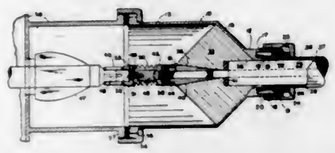


2,449,568
BATTERY MOUNT
Morris A. Shriro, Elberon, and Michael B. Kraus, Jr., Red Bank, N. J.
Application October 3, 1944, Serial No. 557,042
4 Claims. (Cl. 136—173)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. In a mount for two batteries, an insulating support, two yokes secured to opposite sides of said support and wholly supportable thereby, each yoke being made up of electrically conducting material and being substantially U-shaped and including a base and two arms which are springably joined to said base and which extend outwardly from said base at substantially right angles, the two arms of each yoke being provided respectively with gripping contact surfaces facing in the same direction, the said yokes being relatively positioned so that their bases are substantially parallel and so that the proximal arm of each yoke is disposed intermediate the two arms of the other yoke and so that the gripping contact surface

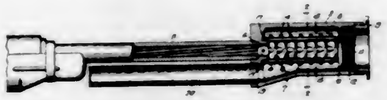
on the proximal arm of each yoke opposes the gripping contact surface on the distal arm of the other yoke, so that the two batteries may be positioned respectively with their electrodes in contact with said two pairs of opposing gripping contact surfaces and may be mechanically supported entirely by said yokes and electrically connected in parallel by said yokes.

2,449,569
ELECTRON BEAM APPARATUS
Russell H. Varian, Wantagh, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application January 18, 1943, Serial No. 472,788
13 Claims. (Cl. 315—5)



1. High frequency velocity modulation electron discharge tube apparatus, comprising means including a cathode for producing an electron beam, a cavity resonator positioned along the path of said beam and adapted to contain a confined electromagnetic field for interaction with said beam, drift-space means beyond said resonator defining a field-free drift space surrounding the path of said beam beyond said resonator, said beam path being evacuated except for residual gas, and positive-ion-repelling means along said path for producing a potential gradient having its more positive portion closer to said cathode, thereby shielding said drift space from said cathode to prevent draining of the positive ions of said gas from said drift space whereby dispersion of said electron beam is minimized.

2,449,570
ELECTRICAL CONNECTOR
Richard J. Violette, Washington, D. C.
Application August 8, 1945, Serial No. 609,707
6 Claims. (Cl. 174—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

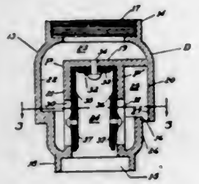


1. A connector for solid dielectric coaxial cables comprising a tubular housing of electrical con-

ducting material fixedly secured and electrically connected to the outer conductor of said cable at one end thereof, flexible connector means within said housing to electrically connect the inner conductor of said cable to the central output terminal contact of an electron discharge tube, said last named means including a bellows member operative to absorb the mechanical stresses incident to lateral and longitudinal dis-

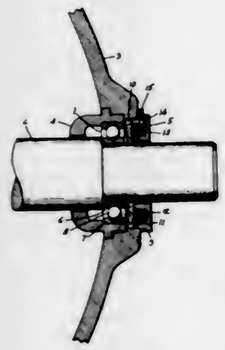
placement of said tube contact with respect to the axis of said inner conductor, a tapered dielectric member concentrically supporting said connector means within said housing and operative to provide an impedance match between said cable and said housing, and fastening means movably mounted on said housing for securing the housing to the shield structure normally enclosing said electron discharge device.

2,449,571
SILENCER FOR FIREARMS
Brooks Walker, Piedmont, Calif.
Application January 31, 1945, Serial No. 575,528
4 Claims. (Cl. 89—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



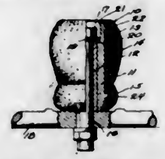
1. In a silencer attachment for a firearm having a rifled barrel, said attachment comprising a hollow body adapted to be connected to the muzzle of said barrel as a continuation thereof and having a central axis, a block of resilient material, a rigid ring bonded to the periphery of said block, a removable retaining member mounted in the outer end of said body and engaging the ring to removably attach the block and ring to said body, and a shoulder on said body against which the inner edge of the ring is held by said retaining member.

2,449,572
POLYSILOXANE RESINS
Charles E. Welsh, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application August 11, 1944, Serial No. 549,135
14 Claims. (Cl. 260—46.5)



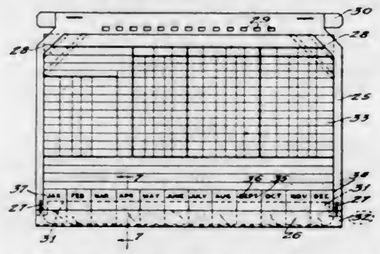
1. A composition of matter comprising a heat-hardenable hydrocarbon-polysiloxane resin containing an average of more than one and less than two hydrocarbon groups per silicon atom, and, as a curing catalyst for the said resin, a small amount of a metal salt of an organic acid soluble in said resin, the said catalyst being present in an amount sufficient to convert the said resin to a heat-hardened, tack-free state.

2,449,573
SAFETY DEVICE FOR FLUID SUPPLY LINES
William Sears White, Denver, Colo.
Application August 31, 1943, Serial No. 500,624
6 Claims. (Cl. 277—60)



1. A safety device, for a fluid system of the type which includes a flush valve disposed in a line leading to a plumbing fixture, comprising a casing having an inlet and an outlet; a partition in said casing between said inlet and outlet and having a port therein; a second partition disposed between said outlet and a chamber leading to an opening in said casing communicating with the atmosphere, said second partition having a port therein; and means for closing said ports comprising a U-shaped strip of flexible material extending over said ports within said outlet portion and fastened to one of said partitions at a point between said ports.

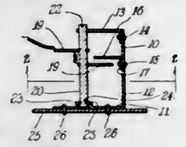
2,449,574
LUBRICATED BEARING
Donald F. Wilcock, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application January 28, 1947, Serial No. 724,827
6 Claims. (Cl. 308—187)



1. In a machine, a rotatable shaft, an anti-friction bearing unit supporting said shaft, means for supporting said bearing unit, porous means adjoining said bearing unit for permitting the passage of oil while preventing the passage of grease to said bearing unit, walls defining an enclosure about said shaft and adjoining said porous means, lubricating grease in said enclosure, a recess formed in at least one of the walls defining said enclosure, and means including an oil wick located in said recess for supplying oil to said grease.

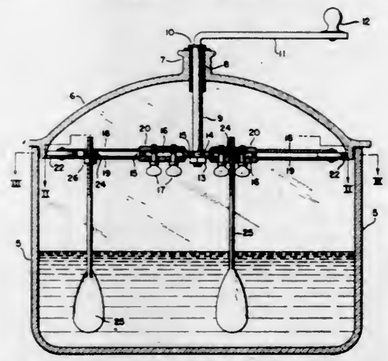
2,449,575
CUSHIONED KNOB
Seymour K. Wilhelm, United States Army Detroit, Mich.
Application October 25, 1945, Serial No. 624,631
6 Claims. (Cl. 74—557)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A cushioned steering wheel or similar knob comprising a rigid core, a relatively narrow first cushioning layer disposed about said core adjacent its upper end, a second cushioning layer disposed about said core and overlaying the first layer, a binder secured about said second layer adjacent the lower end thereof, said first layer and binder cooperating to produce a bulbous enlargement of the second layer and a wear resistant cover secured over said cushioning layers and stitched together to cause the same to conform to the shape of said second layer.



2,449,576
VISIBLE INDEX SIGNAL MEANS
Charles E. Attwood, Chicago, Ill., assignor to Acme Visible Records, Inc., Chicago, Ill., a corporation of Delaware
Application August 25, 1944, Serial No. 551,114
3 Claims. (Cl. 129—16.7)

1. A visible index record device comprising a card holder, a transparent sheath embracing the lower marginal edge portion of said card holder, a record card supported on said holder and extending within said sheath, an elongated signal strip of contrasting color to said card extending within the sheath, and means to secure said signal strips against displacement from said sheath the lower portion of said record card being formed with a plurality of downwardly projecting tongues severally adapted to be positioned in overlying or underlying relationship to said signal strip for signalling cooperation therewith.

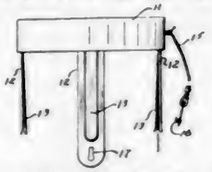


2,449,577
ELECTRICAL CONDENSER
Christopher E. G. Bailey, Bournemouth, England, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application October 9, 1942, Serial No. 461,469
In Great Britain October 10, 1941
6 Claims. (Cl. 175—41.5)

1. A temperature-responsive electrical condenser unit comprising a first electrode consisting of two substantially parallel metal vanes spacedly positioned in staggered relationship with respect to each other in parallel noncoincident planes, a second electrode consisting of a metal vane spacedly interposed between the first vanes in a plane parallel to the planes of said first vanes, a

rotatable shaft member having one of said electrodes secured thereto to alternately position one of said first vanes and said second electrode adjacent one another, and temperature-responsive means for moving one of said electrodes relative to the other in a direction perpendicular to the planes of the vanes.

2,449,578
STIRRER FOR COOKING VESSELS
Louis L. Barr, Pittsburgh, Pa.
Application February 27, 1947, Serial No. 731,371
1 Claim. (Cl. 259—122)

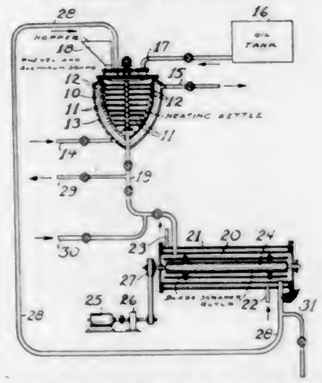


A stirring device comprising a lid adapted to rest upon the upper edge of a pot and having a depending circular flange at its lower edge, of materially less diameter than the smaller diameter of the pot-engaging area of the lid, a vertical shaft extending centrally through the lid, to approximately the lowermost plane thereof, a bracket non-rotatably secured to the lower end of the shaft, stirring devices carried by said bracket and depending therefrom into position to stir the contents of a pot on which the lid is placed, and anti-friction rollers carried by said bracket, on vertical axes, in position to engage the inner annular surface of the said flange and support the shaft against lateral movement.

2,449,579
SLEEVE CUFF HOLDING DEVICE
James A. Barnes, Keokuk, Iowa
Application October 1, 1946, Serial No. 700,535
5 Claims. (Cl. 2—309)

1. A shirt cuff holder comprising an arcuately curved body portion of metallic strip material, a plurality of metallic gripping elements depending from said body portion at the curved periphery thereof, one of said gripping elements being formed with a slot, a flexible member secured to

said body portion at a point removed from said last-mentioned gripping element, and a fastener



element carried by said flexible member and adapted to lockingly engage with said slot.

2,449,580

LUBRICATING GREASE COMPOSITION

Alan Beerbower, Westfield, and John C. Zimmer, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application December 29, 1945, Serial No. 638,431
3 Claims. (Cl. 252—37)

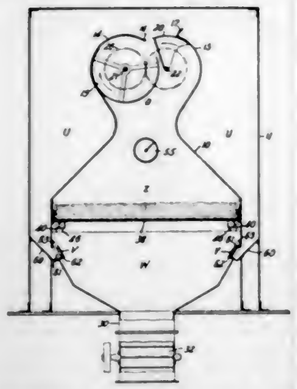
1. Process for preparing a lubricating grease which comprises thoroughly mixing at a temperature sufficiently high to cause the soap to dissolve in the oil, a viscous hydrocarbon oil, grease forming proportions of an aluminum soap of a saturated fatty acid containing between about 10 and 22 carbon atoms in the molecule, and 0.075 to 3% of resorcinol based on the total composition, rapidly cooling the heated mixture in a flowing stream by artificial chilling substantially below the normal transition temperature of about 140° F., and then allowing the mass to stand.

2,449,581

QUANTITATIVE DETERMINATION OF UNSATURATED ALDEHYDES

Joseph E. Bludworth, Max O. Robeson, and Harry A. Truby, Jr., Corpus Christi, Tex., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application March 27, 1945, Serial No. 585,208
4 Claims. (Cl. 23—230)



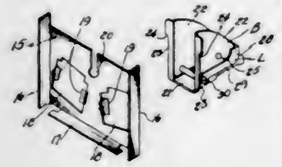
1. Process for the quantitative determination of unsaturated aliphatic aldehydes, which comprises titrating a solution of said unsaturated aliphatic aldehyde in an inert organic solvent containing a double bond addition catalyst with a standardized solution of bromine dissolved in said inert organic solvent until the reaction of bromine with the aldehyde ceases, as indicated by the persistence of the yellow color of bromine in the solution for an appreciable length of time.

2,449,582

PULSATING PNEUMATIC STRATIFIER

Jean Albert Brusset, Blairmore, Alberta, Canada

Application August 3, 1945, Serial No. 608,793
6 Claims. (Cl. 209—468)



1. In apparatus for classifying a mixture of materials according to specific gravity, a horizontally elongated housing having a slot opening at the top thereof substantially parallel to the longitudinal axis of the housing, a reciprocating inclined pervious deck mounted in said housing intermediate the top and bottom of the latter, intermeshing oppositely rotatable and interacting vane and sleeve members within said housing adjacent to and coextensive with said slot opening and cooperating with the latter to establish successively vacuum and pressure conditions above said deck, and means for imparting reciprocating motion to said deck substantially in the plane thereof in timed relation to establishment of said vacuum and pressure conditions.

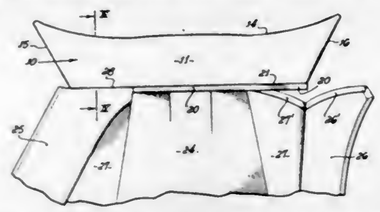
2,449,583

CORD LOCK AND BRACKET

Fred J. Burns, Saginaw, Mich., assignor to The Columbia Mills, Inc., New York, N. Y.

Application April 22, 1947, Serial No. 743,095
8 Claims. (Cl. 160—173)

1. A cord lock mechanism for Venetian blinds comprising a bracket adapted to span and be securely mounted in a head box, a plurality of pairs of spaced-apart securing members on said bracket, and a cord lock unit engageable with said securing members and shiftable to position for either right or left hand blind operation.



2,449,584

SHIRT COLLAR CONSTRUCTION

Samuel Burton, Los Angeles, Calif.

Application July 1, 1946, Serial No. 680,631
2 Claims. (Cl. 2—139)

1. An improvement in the construction of shirts of the collar-attached type comprising: a foldable collar unit free from stitching along its fold line characterized by absence of raw, unfinished edges and comprising a pair of virtually identical collar surface elements of equal width internally stitched together along the point and back margins of the

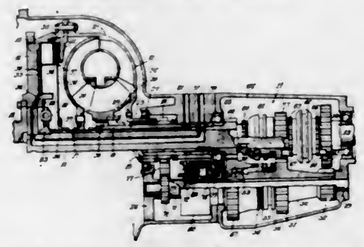
collar to form blind seams, the raw edges delineating the marginal edge of the collar normally attachable to a shirt being bound and enclosed with a tape, said tape terminating at the point margin of the collar whereby said collar may be attached to a shirt through said bound edge.

2,449,585

SUPPRESSION OF CORROSION IN FERROUS ALLOY VESSELS IN THE TREATMENT OF HYDROCARBONS

Elza Q. Camp, Goose Creek, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

No Drawing. Application August 19, 1946, Serial No. 691,655
8 Claims. (Cl. 196—50)



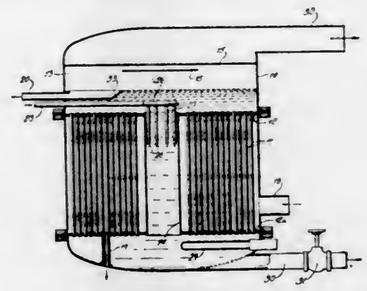
1. A method for treating a hydrocarbon feed stock comprising the steps of subjecting the feed stock in a vapor phase in contact with a ferrous alloy reaction vessel to a high temperature to cause non-catalytic reaction thereof and maintaining a carboxylic acid in the feed stock while it is in the reaction zone to suppress corrosion of said vessel.

2,449,586

TRANSMISSION AND CONTROL THEREFOR

Harold E. Carnagua, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

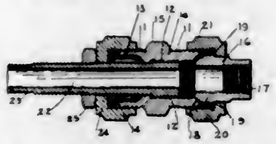
Application August 15, 1942, Serial No. 454,971
24 Claims. (Cl. 74—189.5)



1. In a transmission; the combination of an input shaft; an output shaft; a power train operatively connecting said shafts; a positive type clutch for completing said power train; a hydrodynamic power transmitting device in said power train between said clutch and said input shaft and capable of slipping; said hydrodynamic device producing torque when driven such that the engagement of the positive clutch is rendered difficult when the input shaft is being driven; and means for rendering facile the engagement of said positive clutch including gear means driven from said input shaft and a friction clutch for driving from said input shaft the driven element of said hydrodynamic device in a reverse direction, and a roller clutch in said power train between said positive type clutch and said hydrodynamic device for freeing one element of the positive type clutch with respect to the driven element of the hydrodynamic device on such reverse rotation of the driven element of the hydrodynamic device.

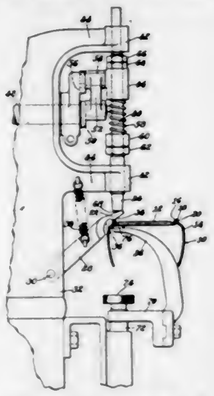
2,449,587

VERTICAL HEATING AND CIRCULATING TUBE STILL



John M. Chambers, Boston, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts

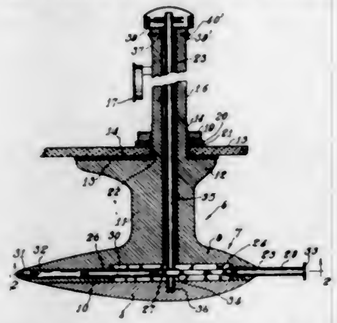
Application December 15, 1944, Serial No. 568,374
2 Claims. (Cl. 202—237)



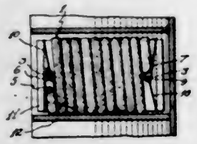
1. Distillation apparatus for the separation of vapor from a solution which comprises a vertically disposed vaporization chamber, a heat exchanger within said vaporization chamber in the form of a heating chest which is disposed between the upper and lower portions of said vaporization chamber and which consists of upper and lower walls, a plurality of vertically extending conduit passages extending through said heating chest and said walls in open communication with solution within said vaporization chamber above and below said heating chest, and a single vertically extending down-comer passage centrally located in said chest and of substantially larger flow capacity than the individual conduit passages of said plurality of conduit passages for returning solution from the portion of said vaporization chamber above said heating chest to the portion of said vaporization chamber below said heating chest, said heating chest separating the said upper and lower portions of said vaporization chamber from each other except for said conduit passages and said down-comer passage, means for introducing a fluid at a temperature above the boiling point of solution within said vaporization chamber into said heating chest to heat and boil solution within said conduit passages by out-of-contact heat exchange through the walls of said conduit passages, means for removing vapor from the upper portion of said vaporization chamber, outlet means for withdrawing residual concentrated solution from the said vaporization chamber, and feed means for supplying fresh solution into said vaporization chamber, said feed means being arranged to forcibly discharge a stream of incoming fresh feed downwardly into said down-comer passage in the normal downward direction of flow of solution within and through said down-comer passage.

2,449,588
ADJUSTABLE PIPE UNION
Floyd R. Clafford, Park Ridge, Ill.
Application August 13, 1946, Serial No. 690,110
2 Claims. (Cl. 285—2)

1. A pipe union for connecting an end of a pipe to a tail pipe, comprising a tail piece nut adapted to be mounted upon said tail pipe, said nut for a portion of its length being interiorly threaded, a barrel exteriorly threaded for a portion of its length adjacent each of its ends adapted to be mounted upon said pipe, one of the threaded ends of said barrel being in threaded engagement with the threaded portion of said nut, a second nut adapted to be mounted for rotational movement upon said pipe, said last-named nut for a portion of its length being interiorly threaded, the threaded portion of said second-named nut being movable upon rotation into threaded engagement with the other threaded end of said barrel, and means for locking said second-named nut in position on said pipe.



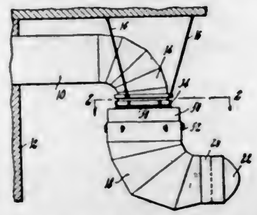
2,449,589
MACHINE FOR OPERATING ON SHOES
George Clarke, Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 23, 1946, Serial No. 671,723
In Great Britain June 11, 1945
1 Claim. (Cl. 12—51)



A beating machine comprising a work support, a plunger mounted for reciprocation toward and away from the support, a hammer pivoted upon the frame of the machine and having a work-engaging portion positioned between the plunger and the work support, and a spring operative to maintain the hammer in engagement with the plunger.

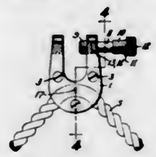
2,449,590
BOAT SPEEDOMETER
Roger C. Colpaert, Detroit, Mich.
Application May 24, 1946, Serial No. 672,126
2 Claims. (Cl. 73—186)

1. A speedometer for a boat having a bottom panel comprising a streamlined body adapted to be positioned in the water beneath said panel in fore and aft manner and having a reduced portion adapted to rise through and be sealed in an opening formed in said panel into the interior of the boat, a forwardly spring-pressed plunger working horizontally in said body, said plunger having a water pressure head against which the water presses on forward motion of the boat to move said plunger rearwardly an amount corresponding to the forward speed of the boat, a vertical rotary shaft extending through said reduced portion and into said body, means operatively connecting said shaft and plunger to turn said shaft in opposite directions in accordance with the position and movement of said plunger, a lateral rheostat contact fixed on the upper part of said shaft, a circular rheostat resistance element supported on the upper part of said reduced portion for engagement by said contact.



2,449,591
PROTECTIVE PACKING MEANS
Kibbey W. Couse, Newark, N. J.
Application August 30, 1944, Serial No. 551,936
2 Claims. (Cl. 206—46)

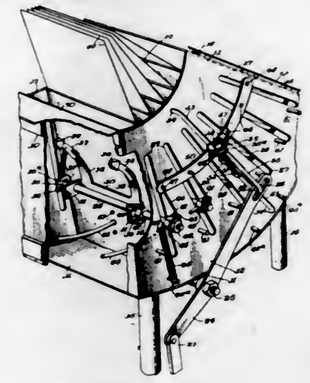
1. Means for protecting containers and their contents at least during shipment comprising, a normally flat narrow two-ended belt like hollow air tight tubular body of flexible material adapted to be spirally wound in continuous contact against some part of a container during shipment and capable of assuming various shapes to suit conditions, said body having an air valve whereby the body may be inflated after being placed in protective position with respect to the container.



2,449,592
DISTRIBUTOR FOR AIR-BORNE FIBERS
Joseph D. Daddario, Franklin, Mass.
Application April 17, 1947, Serial No. 742,181
2 Claims. (Cl. 19—146)

1. A device for distributing air-borne fibers in a blending room, comprising a delivery pipe having a vertical portion opening downward, a collar with an outturned radial flange secured to the end of said portions, a series of spaced studs projecting radially from said collar above said flange, a vertical roller rotatably mounted on each said stud with an anti-friction bearing, a series of spaced studs projecting up from said flange near the periphery thereof, a horizontal roller rotatably mounted on each said upwardly projecting studs, each said horizontal roller having a portion of its periphery projecting slightly beyond the edge of said flange, a lower collar ro-

tatably surrounding said flange and engaging the projecting portions of said roller peripheries, said lower collar having an inturned radial flange at the upper end thereof resting on said vertical rollers, a pipe elbow extension secured to said lower collar and rotatable therewith, and an adjustable deflector at the lower end of said extension.



2,449,593
JIB SHEET SHACKLE
Frederick H. Drake, Boonton, N. J.
Application February 20, 1948, Serial No. 9,902
4 Claims. (Cl. 24—115)

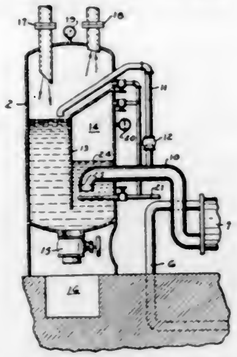
1. A jib sheet shackle comprising two complementary plates of approximately U-form, the bases of the U-form plates being relatively deep as measured along the axis of symmetry of the plates, said bases having complementary grooves therein to receive a jib sheet, screw means for detachably securing said plates to each other, alined complementary grooves in the legs of said U-form plates, said alined grooves being threaded, and a bolt having axially spaced threaded portions for engagement in said threaded grooves of the plates, the bolt between said threaded portions being free from threads.

2,449,594
COLLATOR
Joseph M. Druliner, North Hollywood, Calif., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Continuation of application Serial No. 500,504, August 30, 1943. This application June 24, 1946, Serial No. 678,774
9 Claims. (Cl. 270—58)

1. A collator comprising an arcuate series of bins having open and unobstructed inner ends, adapted to hold stacks of sheets respectively, and radially arranged around a common center so that when the sheets are partially ejected through said open inner ends the exposed end margins of the sheets substantially meet at said common center and hence may be grasped together in connection with conjoint withdrawal of the sheets from the bins, means for partially ejecting the sheets from the stacks, and a unitary back stop means extending transversely of all of the bins, and means supporting said stop means in various

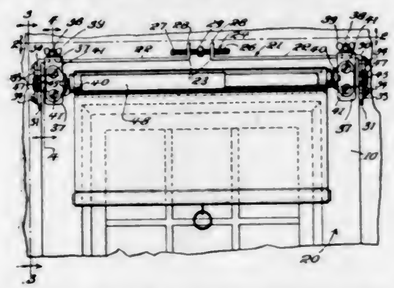
positions of adjustment with respect to the inner ends of the bins whereby the working depths of all of the bins may be equally varied in order to adapt the bins to accommodate stacks of sheets that vary in length.

2,449,595
REINFORCED PLASTIC MATERIAL
William D. Ellis, III, Atlanta, Ga.
Application August 19, 1944, Serial No. 550,281
7 Claims. (Cl. 154—43)



6. A laminated plastic of interbonded layers, each layer comprising a mat of warp strands of relatively large diameter composed of relatively long, loosely interengaged untwisted fibers, said strands being disposed in parallel relation, helically extending threads wrapped about the strands binding the fibers of each strand together filling threads interlacing the warp strands, the strands of each layer extending in parallel relation with respect to the strands of the remaining layers and a hardened plastic which binds the web elements and layers together.

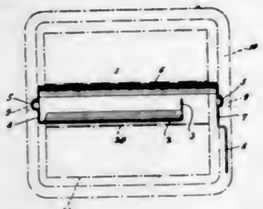
2,449,596
SLUDGE PUMPING APPARATUS
Sigge H. Ericson, Brooklyn, N. Y.
Application August 20, 1946, Serial No. 691,841
5 Claims. (Cl. 103—5)



1. An apparatus for pumping viscous material from the inside of a ship into an overside receptacle comprising, in combination, an upright tank, a transmission line communicating with the upper part of said tank, means for introducing air into the inlet end of the transmission line, means for creating a vacuum in the tank to suck the material into the tank, a baffle space

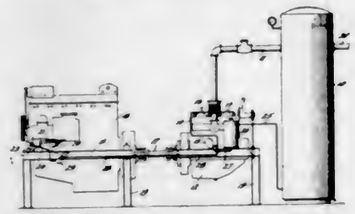
in the lower part of the tank hermetically sealed off from the upper part of the tank and means

for creating a pump suction from the lower part of the baffle space inside the tank.



2,449,597
WINDOW BLIND AND CURTAIN ROD HOLDER
Roy R. Ferrenberg, Latrobe, Pa., assignor of twenty-five per cent to Sue Switzer, Latrobe, Pa.
Application January 24, 1945, Serial No. 574,241
1 Claim. (Cl. 248—252)

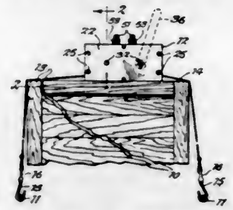
A device of the character described, comprising a tension bar extending along the upper casing of a window having depending portions adapted to engage the outer edges of said casing, tension means included in said bar to cause said portions to grip said casing, said tension bar including relatively flat portions having their inner ends bent upward to receive said tension means, said flat portions having slots relatively spaced from their outer ends to adjustably support longitudinally thereof L-shaped brackets having means connected thereto for supporting a window blind thereon and T-shaped hangers provided on the outer ends of said flat portions to support means for supporting a curtain rod thereon and means for securing said hanger to said flat portions.



2,449,598
TOILET PAPER HOLDER ATTACHMENT
Anestis Foltis, Jackson Heights, N. Y.
Application April 16, 1946, Serial No. 662,644
2 Claims. (Cl. 242—55.2)

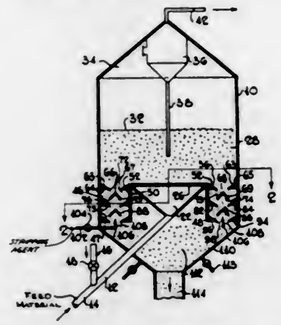
1. A holder for a hollow roll of paper, comprising a body to support said roll, said body having the form of an elongated flat piece of metal bent at several points, and having parallel overlapping sides, said body having transverse supporting parts at each end, one of said parts connecting

said sides, said parts having projections in line with the axis of the holder, one of said parts being flexible and resilient, and extending laterally beyond the body and having a free extremity.



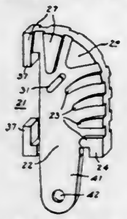
2,449,599
AIR CONTROLLED THROTTLE
Joel B. Fulton, High Point, N. C., assignor to R. L. Brinson Company, trading as Transport Apparatus and Device Company, High Point, N. C.
Application May 28, 1946, Serial No. 672,736
1 Claim. (Cl. 230—3)

In combination: a storage tank for compressed air, an air compressor for suppyling air to the tank, unloader valves on said compressor, an internal combustion engine driving said compressor, a throttle valve for said engine, resilient means operating to advance the throttle valve, pneumatic means mounted on said engine and operable by a pressure increase to retard the throttle valve, an air pressure governor mounted on the compressor, a conduit establishing communication between the governor and the tank, conduits extending from said governor to the unloader valves and to the pneumatic means to unload the compressor and to retard the throttle valve when a predetermined maximum pressure is attained, and a quick release valve interposed in the conduit between the governor and pneumatic means and spaced therebetween, said valve being arranged to open on a fall in air pressure to a predetermined point and cause the quick release of air from the pneumatic means to permit the quick and unopposed action of the resilient means upon the engine throttle.



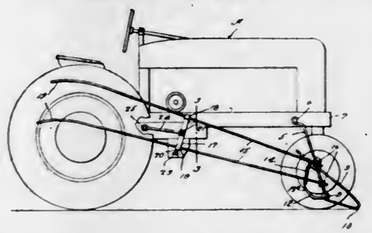
2,449,600
CARGO TIE DOWN
John F. Geiger, Buffalo, N. Y.
Application August 1, 1944, Serial No. 547,613
5 Claims. (Cl. 248—361)

1. A portable and self-contained tie-down device for securing cargo, comprising a box-like structure having apertured end walls, cables having free ends extending through said end walls in opposite directions, and means within the structure for securing each of said cables at various extended lengths, said last named means including locking members mounted on said structure and manually operable to secure said cables against movement with respect to the box and



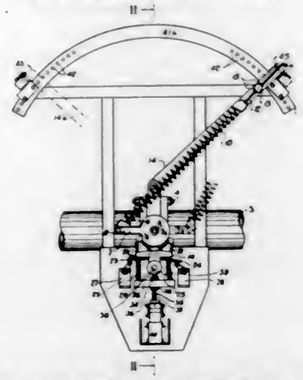
to release each of said cables separately, whereby said device may be applied to various types of cargo and carriers and be located in a plurality of positions between the free ends of said cables and with respect to said cargo and carrier.

2,449,601
APPARATUS FOR CONTACTING SOLIDS AND GASEOUS FLUIDS
Edwin J. Gohr, Summit, Homer Z. Martin, Roselle, and Charles W. Tyson, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application September 16, 1944, Serial No. 554,514
2 Claims. (Cl. 23—288)



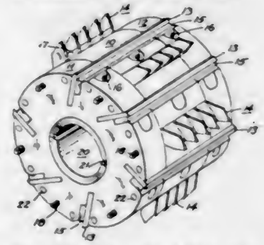
1. An apparatus of the character described including a cylindrical vessel vertically arranged and adapted to contain a dense dry fluidized liquid-simulating mixture of contact particles and gaseous fluid, a centrally disposed horizontally arranged circular distribution perforated plate in the lower portion of said vessel, means for introducing gaseous fluid into said vessel for passage upwardly through said plate, a skirt depending from said plate and concentric with the wall of said vessel and forming an annular space therewith, means for introducing contact particles into said vessel, means for withdrawing gaseous fluid from the upper portion of said vessel, means for introducing a gaseous fluid into the lower portion of said annular space, baffle means in said annular space to provide a tortuous path through said space, said baffle means comprising several pairs of annular baffle members arranged in vertically spaced relation, each pair of annular baffles being so arranged as to deflect the contact particles to a single annular opening substantially centrally of said annular space and annular baffle members of angular cross-section arranged centrally of said annular space and substantially mid-way between each pair of annular baffle members and the next lower pair of annular baffle members said annular space communicating with the lower portion of said vessel above said plate whereby the dense fluidized particle mixture passes down into said space and over said baffle means and means for withdrawing stripped particles from the lower portion of said annular space.

2,449,602
STOKER TUYÈRE
Fred B. Hall, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application December 12, 1942, Serial No. 468,860
6 Claims. (Cl. 110—44)



1. A tuyère block for an underfeed stoker comprising an upright web, a series of spaced ribs on the web extending generally horizontally to form channels for the discharge of air from the inner edge of the block, spaced upright ribs on the web adjacent its upper edge, a triangular boss on the web adjacent its upper inner portion or nose, and an angularly positioned rib on the web adjacent the corner of the boss remote from the nose.

2,449,603
CORNSTALK LIFTING DEVICE
Lester Hammon, Poplar Bluff, Mo.
Application August 30, 1944, Serial No. 551,885
2 Claims. (Cl. 56—119)



1. In combination with a tractor, a device for lifting fallen or leaning stalks of corn in the field and delivering the same to a corn husker in a substantially upright position, said device comprising a substantially upright elongated bracket, means attaching the upper end of said bracket to one side of the tractor frame near the front of the latter, said bracket being provided at its lower end with a transverse horizontal spindle, a nose member pivoted for rocking movement on said spindle, said nose member being normally yieldingly tilted in a direction to engage its forward end portion with the ground, a pair of spaced elongated rods, means securing the forward ends of the rods to said bracket above said spindle, means connecting the rods intermediate their ends to maintain them in spaced relation, and means attached to said connecting means and secured to said side of the tractor frame rearwardly of the bracket to support the rods in rearwardly and upwardly inclined position, said rods extending to a point adjacent the rear end of the tractor.

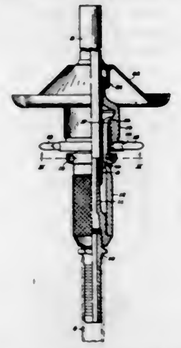
2,449,604
QUICK-ACTING VALVE
James O. Jackson, Crafton, Pa., assignor to Pittsburgh-Des Moines Company, a corporation of Pennsylvania
Application April 11, 1946, Serial No. 661,224
17 Claims. (Cl. 137—139)

1. In a quick acting valve device, a valve body, a valve disk mounted for rotation within such body and having a mounting shaft, one end of which extends through and beyond said body, a lever attached to such shaft end and extending at right angles to the axis of rotation of said disk, a member rotatable with said disk and having spaced pawl engaging notches defining two stop positions for said disk, spring actuated pawls for alternately engaging said notches to latch said disk in its two stop positions, a spring stressing agent movable to either side of a line perpendicular to the axis of rotation of said disk and intermediate its stop positions, a spring having one end operatively connected to said lever and the other end operatively connected to said pivoted agent, and a device for unlatching said notched member; the constructure and arrangement being such that when the valve disk is latched in one stop position and said agent is moved to bias said spring toward the other stop position to stress the spring, and the valve disk is unlatched, said disk will be rotated to its second stop position and said spring, after passing its position of least stress, will again be stressed, and such stressing is utilized to eliminate shock due to stopping rotation of the valve disk.

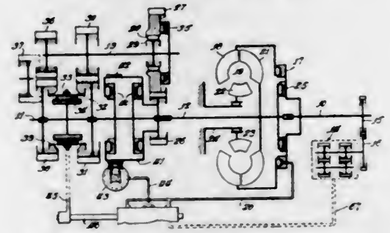
2,449,605
ROTARY CYLINDRICAL SPLITTER AND PLANER HEAD
Gilbert P. Kelton, Dorris, Calif.
Application October 12, 1946, Serial No. 702,918
2 Claims. (Cl. 144—230)

1. A splitter head of the character described having a cylindrical head member made up of three separable sections, a center section and two end sections, pockets for splitter knives formed in the center section only, slots for planer blades extending through all of the sections, and gib screws carried by the end sections for securing the planer blades in their slots.

2,449,606
FLEXIBLE COVER FOR TIRE REPAIR VULCANIZERS AND METHOD OF MAKING
Herman T. Kraft, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 7, 1945, Serial No. 633,427
8 Claims. (Cl. 18—18)



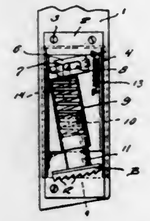
2. A flexible cover for a tire repair vulcanizer comprising a rubber body molded to arch form, rigid bars at the ends of said body, and a steel wire reinforcing cable in said body extending back and forth in a series of convolutions from one end thereof to the other and looped over said bars, said convolutions converging from the central portion of the rubber body to the ends thereof.



8. The herein described method of making a flexible tire vulcanizer cover which comprises winding a steel cable in closely spaced helical convolutions about spaced parallel bars each having a stretched coil spring thereon so that successive convolutions of the cable lie between successive convolutions of the spring, fixing the central portions of the cable convolutions by adhering thereto a strip of rubber, releasing the ends of the coil springs to cause the ends of the cable convolutions to be drawn closer together, removing the bars, inserting short bars in the loops of the cable, removing the coil springs, completing the cover by covering the cable with rubber, and vulcanizing said cover while it is held under tension.

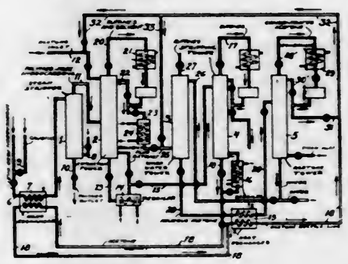
2,449,607
PIPE COUPLING
Anthony La Riccia, Cleveland Heights, and Thomas W. Plante, Cleveland, Ohio
Application September 18, 1945, Serial No. 617,002
8 Claims. (Cl. 285—171)

1. A coupling comprising a nozzle adapted for connection at its rear end to a fluid-supply pipe and for detachable seating engagement at its front end with a second pipe, a coupling member connected to the nozzle, gripping elements pivoted to said coupling member and movable radially thereof into position to engage the outer surface of said second pipe, and means movable axially on said coupling member to force the gripping elements into tight engagement with said second pipe.



2,449,608
TRANSMISSION AND CONTROL THEREFOR
Braudice Byron Le May, Jr., Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application March 8, 1943, Serial No. 478,365
21 Claims. (Cl. 192—3.2)

1. In a transmission, the combination of input and output shafts, a power train between said shafts, a clutch in said power train, a second clutch in said power train, a control mechanically connected with said first-named clutch for engaging the clutch, power operated means for actuating said second clutch, a power operated power control connected with and adapted to move the first-named control, a source of power connected with said power operated means and said power operated power control, said power operated power control being disposed operatively between said power source and said power operated means for engaging said second clutch when said first clutch is engaged and disengaging said second clutch when said first clutch is disengaged.

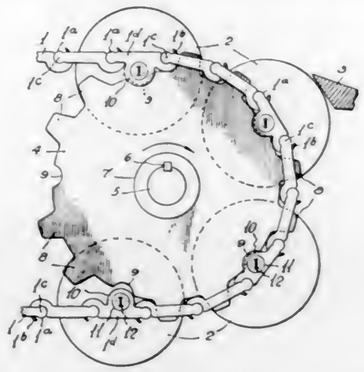


2,449,609
LADDER FOOT
Otto A. Linder and Edward J. Klause, Philadelphia, Pa.
Application January 21, 1947, Serial No. 723,290
3 Claims. (Cl. 228—63)

1. In combination with a ladder or the like a removable foot therefor of the character described comprising, a rectangular plate secured to the lower leg of said ladder, vertical flanges bordering said plate, a U-shaped member slidably mounted within said flanges, resilient means retaining said sliding member upwardly retracted between said flanges, a bracket secured to said sliding member, a T-shaped member carried by said bracket with the leg of said T in an outwardly extended position, a cylindrical tube secured to said sliding

member, a ground engaging foot resiliently carried within said tube, and said T leg being adapted to be lowered and locked against the resilient means to position said foot in an extended ground engaging position for the purpose described.

2,449,610
EXTRACTIVE DISTILLATION OF BUTANES AND BUTENES WITH ACETONE SOLVENT
John D. Long, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application April 1, 1943, Serial No. 481,403
5 Claims. (Cl. 202—39.5)



5. A process for separating a mixture containing butenes, butanes and high boiling hydrocarbons comprising distilling said hydrocarbon mixture in the presence of acetone, recovering a distillate fraction richer in said butanes together with a minor proportion of said acetone, recovering a major proportion of the acetone richer in the butenes and high boiling hydrocarbons as a bottoms product, distilling the bottoms product to recover the acetone and high boiling hydrocarbons, adding at least a portion of the acetone and high boiling hydrocarbons recovered from the bottoms product to the distillate fraction prior to recovering any acetone therefrom and then washing the distillate fraction with water to recover acetone free from high boiling hydrocarbons.

2,449,611
ENDLESS CONVEYER FOR FRUIT GRADING MACHINES
McSherry Lupton, Winchester, Va.
Application December 6, 1945, Serial No. 633,144
6 Claims. (Cl. 198—183)

1. In an endless conveyor assembly having two spaced chains and a conveyor surface of a plurality of rollers carried by and between said

chains, axles extending beyond the ends of each roller, each of said chains comprising a closed loop of a plurality of interconnected links, certain of said links having lugs located on that side thereof within the loop of said chains, and said

lugs having journal bearings at right angles to the plane of the respective chains, said roller axles being mounted in said journal bearings whereby the conveyor surface is composed of a plurality of parallel rollers.

2,449,612

SYNTHETIC RUBBERLIKE MATERIALS

William C. Mast, Philadelphia, Chessie E. Rehberg, Glenside, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application October 27, 1944, Serial No. 560,586
5 Claims. (Cl. 260—78.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

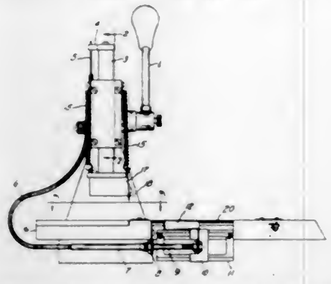
5. A process of preparing a synthetic rubber comprising heating a mixture containing, as monomeric components, an alkyl acrylate and an ester of an alkenyl lactate and a polybasic carboxylic acid in the proportion, by weight, of from 80 to 98% of the acrylate to at least 2% of the ester, to effect copolymerization of the monomeric components, compounding the resulting copolymer with a rubber vulcanizing agent selected from the group consisting of sulfur and benzoyl peroxide, and heating the compounded mixture to effect vulcanization.

2,449,613

REACTIONS OF INORGANIC POLYISOCYANATES AND POLYISOTHIOCYANATES

Henry Charles Miller, Claymont, and Burt Carlton Pratt, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 17, 1943, Serial No. 491,220
18 Claims. (Cl. 260—22)



1. Process for improving vegetable oil modified alkyd resins containing a plurality of groups containing active hydrogen which comprises reacting the same, in an essentially anhydrous system, at 20—200° C. with from 0.5 to 10%, based on the weight of the same, of silicon tetraisocyanate.

2,449,614

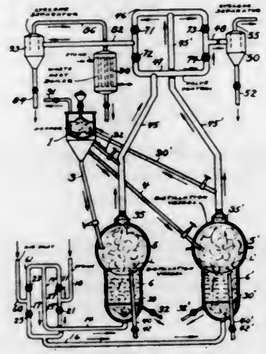
EQUIPMENT FOR ATTACHING PRICE TAGS TO GREETING CARDS

Neil S. Nageotte, Lansing, Mich.

Application February 27, 1947, Serial No. 731,389
1 Claim. (Cl. 93—88)

A machine for attaching price tags to greeting cards, comprising a handle rotatably attached to a support, a shaft attached to the said handle, the said shaft passing through the said support, a gear securely attached to the said shaft, a toothed bar vertically and movably attached to the said support, the teeth of the said bar meshing with the teeth of the said gear, and the rotatable movement of the said handle causing the said toothed bar to move downwardly and upwardly when the handle is moved counterclockwise and clock-wise, respectively, a block attached to the lowermost end of the said toothed bar, the said block having a flat lower surface, when brought downwardly toward the base to compress a clip positioned thereunder the said block and thereupon the said base, the said compression of the said clip causing a tag to be firmly attached to a card, a cutting blade securely attached to the side of the said block for detaching a tag from the continuous strip, a pair of coil springs attached at one end to the said block and attached at their other end to the upper portion of the said support, and causing the said toothed bar to be drawn upwardly, a wire enclosed in a flexible tube, a tubular arm attached to one end of a wire, the other end of the said wire being securely fastened to an extending member, the said extending member being securely attached to the upper portion of the said toothed bar, the said tubular arm being slidably attached to a finger, the said finger being attached to a carrier, the said tubular arm, the said finger, and the said carrier moving horizontally back and forth as the extending member is moved up and down, substantially as shown.

2,449,615



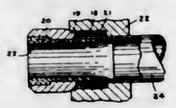
DISTILLATION OF OIL SHALE UNDER FLUIDIZED CONDITIONS

Edward B. Peck, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application August 14, 1942. Serial No. 454,756
2 Claims. (Cl. 202—14)

1. A continuous method of distilling shale to recover valuable hydrocarbons therefrom, which comprises establishing a fluidized mass of finely divided spent shale to which has been imparted a heat content adequate for distillation of raw shale, maintaining the mass in fluidized condition by discharging into it a gasiform material, feeding into said fluidized mass finely divided raw shale for rapid, intimate admixture therewith and distillation primarily by the heat already imparted

to the spent shale, withdrawing spent shale in amount corresponding in general to the amount of raw shale added, withdrawing steam and products of distillation derived from the raw shale by the distillation effect of the hot spent shale, diverting the feed of raw shale to another hot fluidized mass of spent shale when the heat content of the fluidized mass of spent shale being used for distillation has dropped to a point where it is no longer effective for such purpose, passing an oxygen-containing gas into the mass of spent shale from which the feed of raw shale has been di-



verted, whereby the fluidized state is maintained and combustion of residual carbonaceous components of the spent shale is caused to take place, withdrawing products of combustion, and again feeding raw shale into the fluidized mass of spent shale when it has reached the proper temperature for further use in distillation, the finely divided raw shale to be distilled being preheated by contact with hot gases from combustion of the spent shale, generated from the spent shale occupying its original place, said hot gases being passed into the finely divided raw shale so as to pass upwardly therethrough.

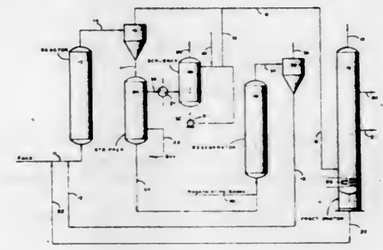
2,449,616

SURFACE CONDENSER

Samuel Pennella, Pompton Lakes, N. J.

Application April 5, 1946, Serial No. 660,000
4 Claims. (Cl. 285—45)

1. A protector for the ends of condenser tubes comprising a sleeve of semi-flexible material having the property of swelling when wetted, an annular head about a portion of said sleeve, said sleeve and head having cooperating annular shoulders thereon for limiting the insertion of the sleeve into the head.



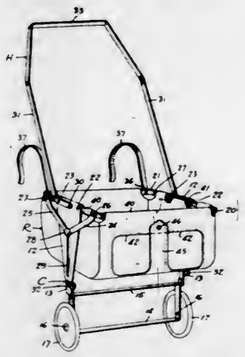
2,449,617

CATALYTIC CRACKING PROCESS

Nick P. Peet, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware

Application June 5, 1945, Serial No. 597,662
6 Claims. (Cl. 196—52)

1. A catalytic cracking process including the steps of contacting a vaporized hydrocarbon feed stock with a powdered solid catalyst in a reaction zone to cause a substantial cracking of the hydrocarbon feed stock, removing a mixture of hydrocarbon vapors and powdered catalyst from the reaction zone and separating it into a light fraction comprising at least a major portion of hydrocarbon vapors and a heavy fraction comprising a substantial portion of powdered catalyst, bringing the heavy fraction into contact with a heated inert gas in a stripping zone to strip residual hydrocarbons therefrom said stripping gas being nonreactive with said residual hydrocarbons and with the catalyst under conditions in the stripping zone, removing a gaseous fraction from the stripping zone, removing spent catalyst from the stripping zone and passing it



to a regeneration zone, regenerating said spent catalyst in the regeneration zone and admixing said regenerated catalyst with hydrocarbon feed stock being passed to the reaction zone, passing the gaseous fraction removed from the stripping zone to a scrubbing zone and there intimately contacting it with a lean oil to obtain a fixed gas fraction and a scrubbing oil fraction, separately removing the fixed gas fraction and the scrubbing oil fraction from the scrubbing zone, admixing at least a portion of said scrubbing oil fraction with said light fraction removed from the first separating zone and fractionally distilling the mixture in a distillation zone to separate it into a plurality of liquid hydrocarbon fractions.

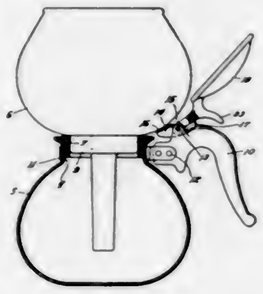
2,449,618

FOLDABLE CART AND CAR SEAT

Lena L. Pritchard, Los Angeles, Calif.

Application January 31, 1947, Serial No. 725,469
6 Claims. (Cl. 280—36)

1. A device of the class described comprising: a two-wheeled frame; front and rear U-shaped frame members pivotally mounted on said frame



to occupy an extended position wherein they co-act to form a rectangular frame, and a folded position wherein the members are disposed flatly at opposite sides of said wheeled frame to co-act therewith in forming a flat, compact parcel; links pivotally connected at one end to said frame members and pivotally connected together at the other end with a pin and slot connection of the latter with said wheeled frame so as to symmetrically guide and brace the frame members; an open-topped flexible receptacle supported by said frame members; and a U-shaped handle having side members pivotally mounted on said wheeled frame for adjustment of the handle to occupy an extended position for grasping by an operator to wheel the device about, or a folded position wherein the wheeled frame and frame members when folded, are received between the side members of the handle for carrying of the device by the handle.

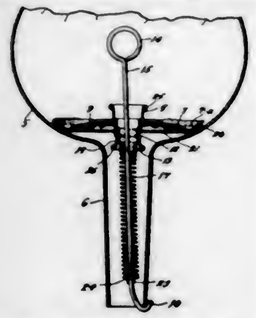
2,449,619

SEAL BREAKER FOR COFFEE MAKERS

Ludwig Reichold, Winsted, Conn., assignor to The Silex Company, Hartford, Conn., a corporation of Connecticut

Application August 26, 1944, Serial No. 551,291
4 Claims. (Cl. 99—292)

1. For a coffee maker of the character described having a lower and an upper bowl, a handle for said lower bowl having a projection thereon, an inverted U-shaped lever pivotally mounted on said projection with a portion of said lever extending over a portion of said handle and the sides of said lever straddling the said projection and pivotally attached thereto, extensions on said sides, and a cover, movable relative to said lever, pivotally mounted on said projection over the lever and adapted to engage said extensions for operating said lever to raise said upper bowl.



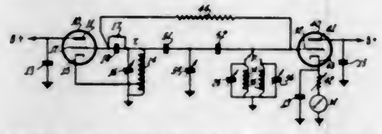
2,449,620

FILTERING DEVICE FOR COFFEE MAKERS

Ludwig Reichold, Winsted, Conn., assignor to The Silex Company, Hartford, Conn., a corporation of Connecticut

Application September 22, 1944, Serial No. 555,279
12 Claims. (Cl. 210—162)

1. A filtering device of the character described comprising an upper perforated plate, a lower perforated plate, cooperating means on said upper and lower plates for securing them together to clamp a sheet of strainer material therebetween, and a spring member attached to said upper plate and extending through an opening in said lower plate for securing said filtering device against the bottom of a container; the said lower plate being slidable over said spring member to permit separation therefrom from the upper plate for replacement of said strainer sheet.



2,449,621

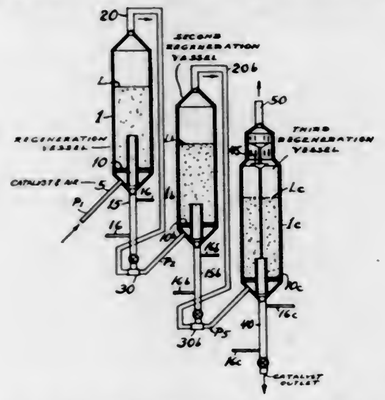
COMPARISON OF RADIO FREQUENCY CIRCUIT LOSSES

Walter van B. Roberts, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application September 30, 1942, Serial No. 460,203
9 Claims. (Cl. 175—183)

3. Means for comparing circuit losses in a number of resonant circuits including means for introducing selectively into said circuits a radio frequency voltage of the frequency to which said circuits are resonant, means for deriving a direct potential proportional to said radio frequency voltages, means for rectifying solely the voltage developed across said circuits which exceeds in amplitude the amplitude of said direct potential and means for determining the magnitude of said rectified voltages.

2,449,622



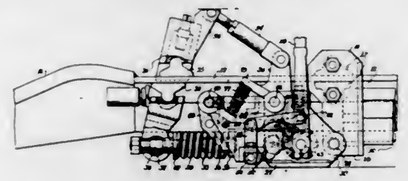
MULTIPLE STAGE REGENERATION OF SPENT CATALYSTS

Bruno E. Roetheli, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application May 15, 1943, Serial No. 487,188
5 Claims. (Cl. 252—242)

1. In the regeneration of powdered catalyst materials contaminated with at most about 1% by weight of carbonaceous deposits the method which comprises passing a mixture of said contaminated catalyst and the total amount of oxygen-containing gas necessary for regeneration of the contaminated catalyst at elevated temperatures and pressures into a first regeneration zone, regulating the linear velocity of said oxygen-containing gas to form a highly fluidized turbulent bed of catalyst in the lower portion of said zone, withdrawing catalyst particles and regeneration gases from said first regeneration zone and passing said withdrawn catalyst particles and regeneration gases into another regeneration zone maintained at a pressure which is lower than that of the first regeneration zone and in which

the catalyst is maintained at a higher temperature than in said first regeneration zone and regulating the linear velocity of the regeneration



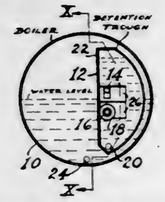
gases passing through said second regeneration zone to form a highly fluidized turbulent bed of catalyst particles in the lower portion of the latter regeneration zone.

2,449,623

FEEDING DEVICE FOR SHAKER CONVEYERS

William W. Sloane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois

Application October 17, 1946, Serial No. 703,816
6 Claims. (Cl. 198—220)



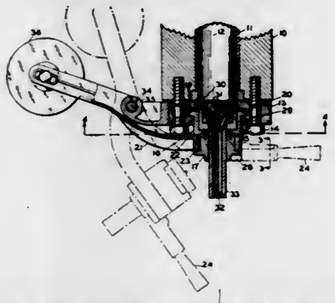
1. In a feeding mechanism for shaker conveyors and in combination with an extensible trough having a shovel on its forward end, a reciprocating trough, a connecting frame transversely pivoted to said reciprocating trough, a carrier member, friction gripping means carried by said carrier member for engagement with said extensible trough during alternate strokes of the conveyor, to extensibly or retractibly move said extensible trough with respect to said reciprocating trough, a link pivotally connecting one end of said carrier member with said connecting frame, another link pivotally connecting the opposite end of said carrier member with said connecting frame, two spaced holding cams, each of said cams being selectively operable to hold one of said links for positive movement with the conveyor during alternate strokes of the conveyor and cause said link to exert a force on said carrier member to engage said grip blocks with said extensible trough during alternate strokes of the conveyor, and a stopping means for each of said links, operable upon the strokes of the conveyor opposite from the extending or retracting strokes thereof to positively disengage said gripping means from said extensible trough, said stopping means being selectively movable into position to serve as a stop for the link positively moved by one of said respective cams and to permit relatively free movement of said other link.

2,449,624

BOILER DETENTION TROUGH

James F. Spaht, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

Application December 7, 1944, Serial No. 567,107
4 Claims. (Cl. 210—14)

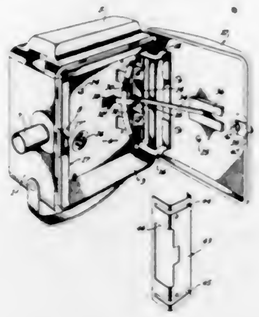


1. A process for removing scale forming constituents from natural water, comprising supplying an aqueous solution of an alkali metal phosphate to a confined treatment zone within a boiler, and subject to heat therefrom, supplying natural feed water to said zone in admixture with a quantity of water from said boiler, said boiler water containing alkaline constituents in sufficient quantity to form in situ with said alkali metal phosphate a tri-alkali metal phosphate sufficient to react with substantially all the scale forming constituents in the natural water, entirely within said treatment zone, and continuously removing reaction products from the lower portion of said zone while discharging the treated water from the upper portion thereof.

2,449,625

DIE ASSEMBLY

Joseph Stuart, II, Wilmington, Del., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War

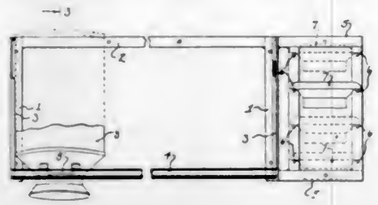


Application December 29, 1945, Serial No. 637,950
3 Claims. (Cl. 18—12)

1. In an extrusion die assembly, a support head adapted to be rigidly attached to the head of an extrusion cylinder, said support head having a central opening axially therethrough, an annular groove extending outwardly from said central opening, and recesses extending from one end of said central opening to said annular groove; a hollow retainer for holding the components of an extrusion die, said retainer having flanges thereon of a size to pass through said recesses to said annular groove and to fit within said groove,

to attach said retainer to said support head upon rotation of the said retainer with respect to said support head; and components of an extrusion die carried by said retainer.

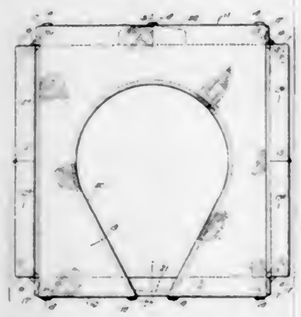
2,449,626
MAGAZINE TYPE CAMERA
Robert A. Suthann, Los Angeles, Calif.
Application October 4, 1946, Serial No. 701,106
8 Claims. (Cl. 88—17)



1. A portable motion picture camera including a housing provided with a magazine chamber having a bottom, top, end walls and one side wall, the other side wall being open to provide a loading port, an aperture plate within and carried by one end wall of said magazine chamber, a cover for said loading port hinged to the other end of the chamber opposite the aperture plate, a vertical pin adjacent the hinge of said cover and means, within the magazine chamber for pressing a film magazine against the aperture plate, said means including a bowed leaf spring provided with apertured ends mounted upon the vertical pin for partial rotation thereon, the ends of said spring being longitudinally movable along said pin, and a lateral finger, integral with the spring arranged to contact a side of a magazine within the chamber to eject such magazine upon movement of the spring from its normal position.

2,449,627
OIL PROSPECTING METHOD
William J. Sweeney, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Original application December 14, 1937, Serial No. 179,676. Divided and this application August 9, 1941, Serial No. 406,220
3 Claims. (Cl. 23—230)

2. A method of geochemical oil prospecting comprising sinking a bore, disposing an adsorbent for hydro-carbon gases therein in such relation to said bore that the gases in said bore have access to the adsorbent, removing said adsorbent and analyzing the gases adsorbed for the presence of significant gases.

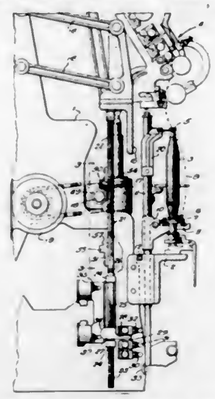


2,449,628
MILK CAN DRYING RACK
Edward P. Swintosky, Kewaunee, Wis.
Application May 6, 1946, Serial No. 667,639
1 Claim. (Cl. 211—75)

A rack of the character described comprising a pair of horizontally spaced L shaped brackets each having a vertical and a horizontal leg, a strap connected to the vertical legs of the bracket, bowed brace rods, each connected to the vertical legs and the horizontal legs of the bracket at a point adjacent the outer ends of the horizontal legs, a rail secured to the horizontal legs and

brace-rods adapted to engage the outer handle of an inverted milk can, the strap being adapted to engage the bottom edge of an inverted can, a skeleton extension connected to the vertical leg of said brackets and pairs of rods extending from the extension adapted to support can tops.

2,449,629
CHILD'S FOLDING SEAT
Edward B. Thompson, Downers Grove, Ill.
Application April 5, 1946, Serial No. 659,982
2 Claims. (Cl. 4—239)

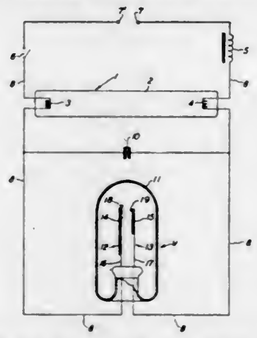


1. A child's collapsible seat of the character described, including: a non-separable collapsible peripheral frame of a size of the same order as a conventional toilet seat, and comprising rigid front and back members and a pair of side members permanently pivotally connected to the front and back members, each side member being hinged in the center in such manner as to be collapsible inwardly only; and a seat member of flexible sheet material having an opening therethrough and adapted to be fastened to the front and back members of the frame.

2,449,630
SPINNER CONTROL MECHANISM
John C. Van Riper, Radburn, N. J., assignor to John H. Hays, Morristown, N. J.
Application November 6, 1947, Serial No. 784,451
9 Claims. (Cl. 57—79)

1. Control mechanism for ring spinners having a draft section vertically movable in increments equal to the upward movement of the ring rail comprising, a control rod vertically depending from the draft section, means to start and means

to stop the movement of the draft rail carried by the control rod, and means carried by the ring

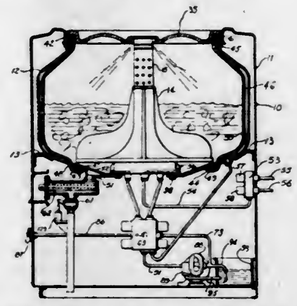


rail assembly to actuate said start and stop means.

2,449,631
OIL COMPOSITION
John C. Zimmer, Union, and Raphael Rosen, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 18, 1945, Serial No. 623,186
6 Claims. (Cl. 252—58)

1. A composition of matter consisting essentially of an oleaginous vehicle with a tendency to foam during processing, use or manufacture, and 0.0001 to 10% by weight of a foam inhibiting additive consisting essentially of a liquid non-volatile polymer of a chloro-fluoro substituted olefin of 2 to 10 carbon atoms, said polymer containing 10 to 50 carbon atoms per molecule and having a major part of its normal hydrogen content replaced with said halogens.

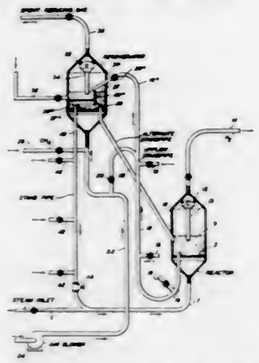
2,449,632
GLOW DISCHARGE SWITCH
Daniel Johannes Hindericus Admiraal, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application December 5, 1946, Serial No. 714,217
In the Netherlands February 13, 1946
7 Claims. (Cl. 200—113.5)



1. A glow switch of the discharge type comprising an envelope containing in ionizable medium and a pair of laminated bimetallic members each having a discharge supporting surface, one of said members being substantially longer than the other and constructed of thicker laminations to produce rapid engagement between the members upon establishment of a glow discharge therebetween and to effect engagement therebetween during at least a part of the return travel during the cooling period by virtue of the difference in the respective temperature-deflection characteristics.

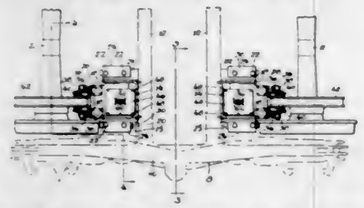
2,449,633
HEADWEAR
Nathan Albert, Jack Albert, and Eli Albert, New York, N. Y.
Application December 24, 1943, Serial No. 515,531
1 Claim. (Cl. 2—172)

A cap having a crown provided with a front visor, a folded band extending from the ends of said visor around the back of said crown and having an inner layer attached at its bottom edge to the bottom edge of said crown and at the top continuing into an outer layer superimposed upon said inner layer and separate therefrom at its bottom edge, and said outer layer having narrow tabs extending slightly inwards of the ends of said visor, a strip of cloth material extending along the back of and attached to said visor, and means for releasably connecting said tabs with said strip, said means comprising buttonholes formed in said tabs and engageable with complementary buttons mounted on said strip, and an elastic strip adjustably mounted in position between the buttons on first named strip for controlling the size of the crown of said cap.



2,449,634
AUTOMATIC WASHING MACHINE
Henry Baade, Cleveland, Ohio, assignor to Visioneering Company, Inc., Cleveland, Ohio, a corporation of Delaware
Application June 10, 1946, Serial No. 675,540
11 Claims. (Cl. 68—12)

1. An automatic washer comprising a tub having a cover secured thereto, an agitator member journalled in said tub for oscillatory movement, a hydraulic motor secured to said agitator for oscillating same, an electrically operated control valve having two tandem valves received in two pairs of opposed valve chambers formed therein, a drain pipe, a solenoid operated valve in said drain pipe, a timer switch for controlling the



operation of the automatic washer, means connecting said timer switch to said control valve and adapted to position the tandem valves thereof as desired at predetermined portions of an operative cycle to effect desired operation, automatic means controlled by said timer switch for rotating same through a cycle, means connecting said control valve to said motor for flow of liquid thereto for operation thereof and for receiving spent liquid from said motor, means connecting said timer switch to said solenoid valve for actuating same to drain said tub at predetermined points in a cycle, liquid supply means, means connecting said liquid supply means to said tub for filling same and being operated by said timer switch, a flexible diaphragm secured within said tub at the upper and lower extremities thereof to form an enclosure therewith, means connecting said control valve to the enclosure within said tub so that liquid can be inserted therein to expand said diaphragm so as to force it against material in said tub and expel liquid therefrom, and pressure booster means connected to said control valve for receiving liquid therefrom and supplying liquid under pressure thereto, said control valve and said hydraulic motor and the enclosure formed by said flexible diaphragm forming with their connecting means a closed liquid flow circuit.

2,449,635
PRODUCTION OF HYDROGEN
Frank T. Barr, Summit, N. J., assignor, by mesne assignments, to Standard Catalytic Company, a corporation of Delaware
Application October 9, 1946, Serial No. 702,301
In Canada March 19, 1943
3 Claims. (Cl. 23—214)

1. A continuous process for producing hydrogen by reacting steam with metalliferous reducing agents which comprises contacting steam in a hydrogen generation zone at a steam reducing temperature and an elevated pressure of between about 70 and 1500 lbs. per sq. in. gage with a dense, turbulent, ebullient mass of a finely divided solid metalliferous reducing agent fluidized by an upwardly flowing gas to form a well defined upper level, recovering hydrogen overhead from said level, withdrawing fluidized spent solid agent downwardly from said mass, passing withdrawn spent agent under the pseudo-hydrostatic pressure of a fluidized column of said spent agent upwardly to an elevated regeneration zone, contacting said spent agent in said regeneration zone with a fluid regenerating agent at a regenerating temperature and at a pressure substantially lower than said elevated pressure, in the form of a second dense, turbulent, ebullient mass of a finely divided solid fluidized by an upwardly flowing gas to form a well defined upper level, withdrawing fluidized regenerated solid reducing agent downwardly from said second mass, and passing withdrawn regenerated agent under the pseudo-hydrostatic pressure of a second fluidized column of said regenerated agent to said generation zone, said second column having a height not exceeding about 200 ft. and an apparent density of about 50 to 250 lbs. per cu. ft., and the differential between said elevated and lower pressures as determined by said height, amounting to about 70–300 lbs. per sq. in.

2,449,636
BRAKE CYLINDER MOUNTING
Walter H. Baselt, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 2, 1945, Serial No. 602,830
20 Claims. (Cl. 188—153)

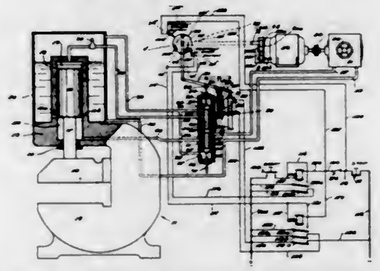
1. In a brake arrangement for a railway car truck comprising a truck frame including a side rail at each side thereof and a transversely extending member connected to said rail at each side of the transverse center line of said frame, and spaced wheel and axle assemblies supporting said frame adjacent respective ends thereof, the combination of brake means for each assembly comprising a yoke supported by the adjacent member and including spaced arms with ledges on the remote sides thereof, a cylinder housing projecting at its upper extremity into said yoke and comprising torque arms removably connected to respective ledges, a pair of brake levers fulcrumed to said housing and carrying brake shoes, a cartridge cylinder unit in said housing comprising a cylinder and spaced pistons therein bearing against respective levers, said unit being slidably disengageable from said housing and removable from the top thereof without dismantling said levers, and a brake rotor connected to said assembly and disposed between said shoes for braking engagement therewith.

2,449,637
METHOD AND APPARATUS FOR MANUFACTURING FLUORESCENT LAMPS
Harold D. Blake and Wilford J. Winninghoff, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
Application September 6, 1946, Serial No. 695,264
17 Claims. (Cl. 316—1)

1. The method of manufacturing electric fluorescent lamps in a sequence of operations which comprises heating a partially manufactured lamp, having a bulb with a coating of a fluorescent material and a binder on the interior thereof and having a passage through to said interior, to cause the binder to burn and be separated from the coating, exhausting the lamp through the passage directly following the heating operation before said lamp cools appreciably to remove all

exhaustible materials therefrom, introducing into the lamp immediately after the final exhaustion thereof an ionizable gas and a discharge support-

ing material through the passage, and thereafter sealing the passage in the lamp to permanently seal said lamp.



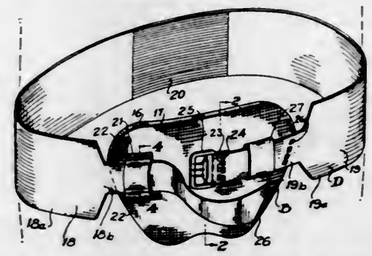
2,449,638
SUBSTITUTED GLYCINAMIDES
William F. Bruce, Havertown, and Joseph Seifter, Willow Grove, Pa., assignors to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application May 10, 1946, Serial No. 668,786
3 Claims. (Cl. 260—558)

3. A physiologically active compound comprising essentially a compound from the group consisting of compounds having the general formula

$$R_1NHCH_2CONHR_2$$

where R_1 stands for an aralkyl having 3 carbon atoms in the alkyl chain and R_2 stands for a diarylalkyl; and the non-toxic salts of said compounds.

2,449,639
HYDRAULIC PRESS SYSTEM WITH CONTROL MEANS YIELDING HIGH-SPEED OPERATION THEREOF
Earl Cannon, Rockville Centre, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a corporation of Delaware
Application January 13, 1943, Serial No. 472,184
6 Claims. (Cl. 60—52)



1. In a hydraulic, material-forming press system, the combination of a distributing valve having a movable valve element shiftable from either to the other of an operating range of movement adapted to control delivery of liquid to a hydraulic press so as to continuously operate the latter, and an idling range of movement adapted to control delivery of liquid to such a press so as to cause the press to open and remain open, means for continuously actuating said valve element, and means for shifting the latter from either to the other of the two said ranges of movement thereof, the said actuating means comprising a valve gear, and a motor connected through said valve gear to said valve for operating the latter, the said shifting means comprising an oscillating lever, connected to said valve element and constituting a part of said valve gear, and means for varying the fulcrum-point of said lever, the latter means comprising a solenoid having a core to which the lever is pivotally connected at its fulcrum-point.

2,449,640
SOLUTIONS OF RIBOFLAVIN
Jesse Charney, New York, N. Y., assignor to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application June 11, 1946, Serial No. 676,097
6 Claims. (Cl. 167—81)

1. A liquid solution for oral or parenteral use comprising riboflavin in solution in a liquid medium selected from the group consisting of water and propylene glycol, in a concentration higher than that obtainable in said medium alone, and a monohydroxy, monoalkoxy benzaldehyde solubilizing agent, the monoalkoxy group containing not more than 5 carbon atoms therein.

2,449,641
ABDOMINAL SUPPORT
John Cidissen, Los Angeles, Calif.
Application August 9, 1946, Serial No. 689,497
1 Claim. (Cl. 128—96)

An abdominal support, including: a sheet of inflexible material of concavo-convex form; a pad of compressible material covering the concavo side of said sheet; said sheet having perforations therein; and a belt having its buckle end secured to the convex side of said sheet by stitching extending through said perforations; and a belt loop secured to the convex side of said sheet by stitching extending through other perforations in said sheet, and receiving the other end of said belt.

2,449,642
WELL WASHER AND TESTER
William H. Coons, Lomita, Calif.
Application April 13, 1946, Serial No. 661,944
1 Claim. (Cl. 166—20)

In a device of the class described, an inner barrel adapted to be supported by a string of drill pipe supporting a catcher adapter, a catcher supported by said catcher adapter operable to engage a well casing when said device is rotated in respect to said casing, a valve opening in said catcher adapter, a ball valve adapted to seat on and close said opening, a valve actuating member supported by said inner barrel having a shoulder

thereon, means connecting said actuating member and said valve to open said valve, a floating barrel slidable upon said inner barrel, a pair of expansible collars spaced apart, one of said expansible collars attached to said inner barrel adjacent the upper end of said floating barrel, an expander attached to the upper end of said floating barrel, adapted to expand said last-mentioned expansible collar against said casing, the other of said expansible collars mounted upon an

adapter slidable on said inner barrel and an expander attached to the lower end of said floating barrel adapted to expand said last-mentioned expansible collar, said adapter being affixed to said catcher adapter, whereby locking said catcher and lowering said inner barrel will force said mandrels to expand said expansible collars and seal off a section of said casing and to close said valve, ports opening through said inner and floating barrels forming a passage from the interior of said barrels to said sealed off section of said casing.

2,449,643

BENZONITRILE PRODUCTION FROM BENZENE OR DIPHENYL AND HCN

John N. Cosby, Morristown, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application April 26, 1946, Serial No. 665,339

6 Claims. (Cl. 260—465)

1. The process for the production of benzonitrile which comprises heating a reaction mixture containing hydrocyanic acid gas and vapors of a compound from the group consisting of benzene and diphenyl at temperatures in the range 500° C. to 1100° C., at which temperatures the hydrocyanic acid and said compound react forming benzonitrile, said reaction mixture initially containing 1 to 10 mols hydrocyanic acid for every 1 mol benzene plus ½ to 5 mols hydrocyanic acid for every 1 mol diphenyl.

2,449,644

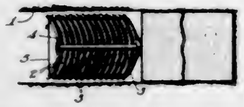
PRODUCTION OF N.N DIBUTYL PHENETHYLAMINE

Joseph D. Danforth, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

No Drawing. Application October 19, 1944, Serial No. 559,476

1 Claim. (Cl. 260—577)

A process for the production of an aryl alkyl amine which comprises reacting styrene with dibutylamine at a temperature of from about 0° C. to about 150° C. in the presence of a catalyst comprising essentially the reaction product of metallic sodium with dibutylamine.



2,449,645

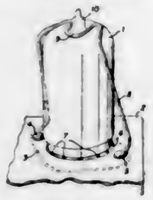
BLASTING PLUG

James Q. du Pont, Wilmington, Del., and Earl R. Jones, Philadelphia, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application February 13, 1947, Serial No. 728,264

4 Claims. (Cl. 102—30)

1. A blasting plug comprising a plurality of disk-shaped bodies of flexible material having a resilient lamella paired with each of said bodies of flexible material and securely attached thereto, said resilient lamellae being of diameters less than the bodies of flexible material; and releasable means holding both disks of flexible material and the resilient lamellae in deformed position of reduced diameter, said plug being adapted in deformed position to allow ready insertion in a blast hole of predetermined diameter and on subsequent release of said rupturable means to become tightly wedged against the walls of said hole.



2,449,646

VACUUM TUBE LOCK

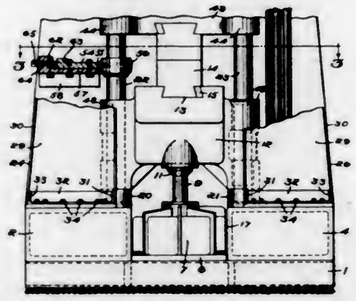
Kurt Emde, Itasca, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois

Application November 23, 1945, Serial No. 630,441

1 Claim. (Cl. 250—27.5)

A chassis for a radio set comprising, a vacuum tube socket mounted in said chassis for engaging a vacuum tube having a tubulation extending therefrom, a resilient elongated member of single-piece spring wire construction having opposite ends adjacent said chassis on opposite sides of said socket, means fastening rigidly each of said opposite ends to said chassis, said means also fastening said socket to said chassis, said member having an intermeditte resilient part extending above said socket, said intermediate part having a W-shaped portion pressed by the resilience of said member over the top of a tube mounted in said socket with the center opening of the W-shaped portion extending partly around said tubulation, the center apex of the W-shaped portion lying substantially further from said socket than the side legs thereof, said resilient member thus pressing said W-shaped portion over the top of a tube in said socket to engage the tubulation of said tube in the center apex of said W-shaped portion to thereby prevent disengagement of said tube and socket by

shock and vibration forces, whereby the side legs of said W-shaped portion tend to snap over the top of said tube in said socket and yet are easily moved aside for easy insertion and removal of a tube from said socket.



2,449,647

DROP HAMMER

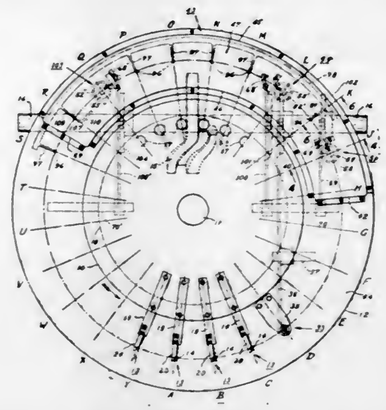
Reginald P. Fitzgerald, Braintree, Mass., assignor to Pneumatic Drop Hammer Company, Braintree, Mass., a corporation of Massachusetts

Application May 21, 1945, Serial No. 594,967

2 Claims. (Cl. 78—37)

1. A double-acting drop hammer having a base, pairs of front and rear vertical standards mounted on said base, an overhead beam connecting said standards, parallel vertical cylindrical columns intermediate of the front and rear standards of the respective pairs mounted at their ends in sockets in said base and overhead beam, a vertically movable hammer, and a cooperating vertically movable anvil having end portions fitting and slidably mounted on the respective columns, a member mounted upon adjacent walls of one of said pairs of standards approximately in the plane of impact of said anvil and hammer provided with parallel horizontal guideways, an adjusting member for the adjacent column having annular means embracing the column and an extension slidably fitting said guideways, acting to prevent forward or rearward deflection of said column, means for forcing said adjusting member longitudinally of said guideway to bend said column in a direction lengthwise of said hammer and anvil, and means for locking said member in adjusted position, and cooperating means mounted upon the other pair of standards engaging the column adjacent thereto at approximately the plane of impact of the hammer for preventing forward or rearward deflection of said standard.

2,449,648



METHOD OF AND APPARATUS FOR MANUFACTURING FLASH LAMPS

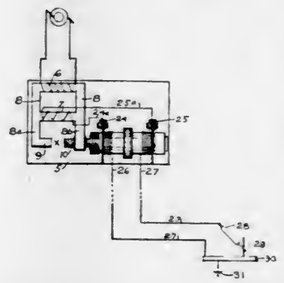
John Flaws, Jr., East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York

Application February 26, 1944, Serial No. 524,081

11 Claims. (Cl. 117—102)

6. In the manufacture of photoflash lamps, the method of providing discrete heavy coatings of a fulminating material on the end portions of closely spaced parallel metal wire supports which method comprises, immersing the said end portions of the supports in a liquid suspension of the fulminating material to form a heavy coating on the supports and a bridge of said material across the supports, and then directing a blast of air substantially longitudinally of and between said

supports to sever the said bridge of suspension material and redistribute it on the said supports.



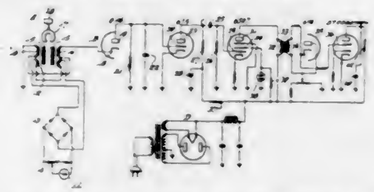
2,449,649

WELDING TRANSFORMER

James Donovan Forney, Fort Collins, Colo.

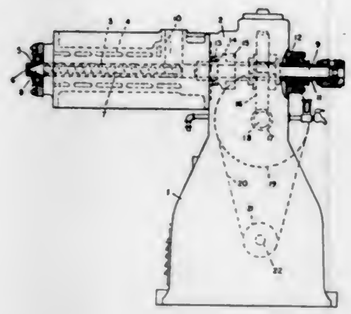
Application October 8, 1945, Serial No. 621,146

1 Claim. (Cl. 171—119(777))



In an adjustable welding transformer having a primary and a secondary core and a magnetic shunt about the secondary core, said shunt comprising an air gap, one of the poles of the air gap having a threaded opening, a threaded member of magnetic material positioned in the opening in operative engagement with the threads in the sides thereof, whereby when said member is rotated its end will move relative to the other pole, a drum mounted on the outer end of the magnetic member and interconnected therewith by means permitting relative axial movement but preventing relative rotary movement, two flanges of electrically conducting material secured to the drum in spaced relation, an electrical conductor connected to each flange and wound around the conductor in opposite directions, whereby the drum can be rotated in either direction by means of said conductors, a winding on the secondary core, and a stationary conductor in electrical contact with each flange, the ends of the secondary winding being electrically connected with the stationary contacts.

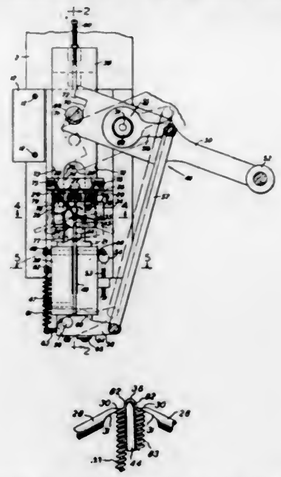
2,449,650
INCANDESCENT LAMP AND METHOD OF MANUFACTURE
Alfred Greiner, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application October 1, 1947, Serial No. 777,239
9 Claims. (Cl. 176—29)



1. An electric incandescent lamp comprising a sealed double-ended glass envelope having tubular end portions, a pair of metal end contact caps fusion-sealed to the ends of said envelope, each of said end caps having its end wall provided with an apertured indentation, a filament in said envelope, a pair of lead-in conductors connected to the ends of said filament and each extending outwardly through the aperture and into the indentation recess of a respective one of said end caps, and a quantity of metallic fusible material filling the recess and aperture in each end cap and securing the associated conductor thereto.

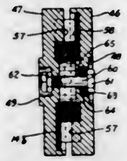
2,449,651
ELECTRONIC CIRCUIT FOR TRIGGERING STROBOSCOPIC DEVICES
Claude M. Hathaway, Denver, Colo., assignor to Marcellus S. Merrill, Denver, Colo.
Continuation of application Serial No. 446,611, June 11, 1942. This application March 11, 1946, Serial No. 653,511
8 Claims. (Cl. 315—194)

1. An electronic circuit for generating sharply defined impulses from sine wave currents, including in combination, a rectifier for rectifying the sine wave currents and having an output circuit, an amplifier including a thermionic tube having a grid coupled to the output circuit of the rectifier, means included in said output circuit for modifying the wave shape of the rectified currents, a second amplifier including another thermionic tube having a plate, coupling means between said tubes including means for differentiating the rectified and modified currents to produce a wave shape having a single peak per cycle in definite phase relation with the sine wave currents, a coupling transformer having primary and secondary windings, said second thermionic tube having a plate circuit including the primary winding of said coupling transformer, said plate circuit forming another differentiating circuit for more sharply peaking said wave shape, a second rectifier connected in parallel with said secondary winding of said coupling transformer and having an output circuit, and an output circuit electrically coupled to the output circuit of said second rectifier.



2,449,652
EXTRUSION PRESS
Allen L. Heston, Akron, Ohio, assignor to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio
Application October 29, 1945, Serial No. 625,363
5 Claims. (Cl. 18—12)

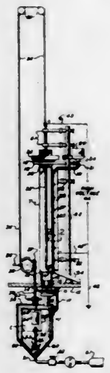
1. In an extrusion press, the combination with a machine body provided with a cylindrical chamber terminating in an extrusion orifice, and a bearing fixed with respect to the position of said orifice, of an extrusion screw assembly rotatably supported by said machine body, said assembly comprising a screw provided with a working portion extending into said chamber and a guiding portion having a rear end terminating without said machine body, a driving quill slidably keyed on said guiding portion and likewise having a rear end terminating without said machine body, an axial thrust bearing on said quill adapted to engage said fixed bearing, and means in engagement with the rear ends of said quill and guiding portion of said screw member for adjustably securing said quill and screw member in desired axial relationship, whereby the position of the forward end of the working portion of said screw may be adjusted axially with respect to said orifice.



2,449,653
FILAMENT FORMING APPARATUS
Elmer B. Isaac, deceased, late of University Heights, Ohio, by Dorothy J. Isaac, administratrix, University Heights, and Francis J. Rippl, Cleveland, Ohio, assignors to General Electric Company, a corporation of New York
Application July 27, 1946, Serial No. 686,656
17 Claims. (Cl. 153—2)

7. Apparatus for shaping coiled wire into lamp filaments comprising support means, an anvil mounted on said support means and adapted to project into the pitch space in a turn of the wire coil, and a pair of fingers mounted on said support means with coil-engaging ends thereof in normally adjacent side-by-side relation opposite the anvil and adapted to project into respective pitch spaces of successive turns of the wire coil, said fingers and anvil being mounted to receive therebetween a turn of the wire coil with the anvil projecting into the wire coil from one side thereof and within the pitch space of said coil turn and with said fingers projecting into the coil from the opposite side thereof and respectively within the pitch spaces at either side of said coil turn, said fingers being further mounted for pivotal movement about a common axis adjacent their said coil-engaging ends to swing oppositely away from each other and

around opposite sides of the anvil to bend the wire coil therearound.



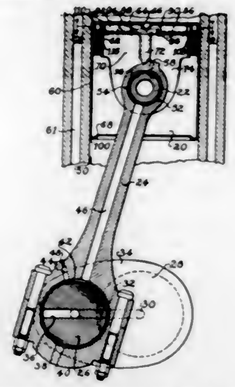
2,449,654
SHAFT COUPLING
Robert Edison Edouard Jessop, West Vancouver, British Columbia, Canada
Application December 21, 1943, Serial No. 515,159
In Canada December 23, 1942
3 Claims. (Cl. 64—13)

1. A shaft coupling comprising a pair of flanges, a recess formed in the inner surface of each flange, each recess having at least three sides, a correspondingly shaped resilient pad adapted to fit snugly into said recesses, a plurality of recesses formed in the opposite faces of the pad, said recesses extending part way through the pad, ribs formed in the flange recesses fitting snugly into the pad recesses, a bolt extending freely through one flange and removably secured to the other, and a resilient washer between the bolt and the flange through which it freely extends, said bolt resiliently retaining the flanges and pad together.

2,449,655
COATING APPARATUS FOR TUBULAR OBJECTS
Raymond L. Keiffer, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application May 11, 1944, Serial No. 535,164
1 Claim. (Cl. 91—18)

In apparatus of the character described, the combination of means for supporting and rotating a vitreous bulb; external contact means for making linear external contact with the bulb wall across a zone to be internally coated comprising a longitudinally slit tube with a fibrous strip mounted in its slit for bearing against the bulb outside the tube, and means for supplying conductive liquid to said tube to keep the strip moist therewith; an internal corona discharge electrode, with means for moving it through the bulb across said zone while the bulb is supported and rotated as

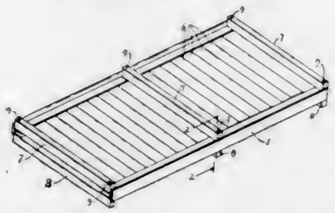
aforesaid; means for applying between said contact means and said electrode an electrical potential high enough to produce a corona discharge through the space between said electrode and the bulb wall; and means for introducing the finely divided material in dispersion into the field of potential around the electrode inside the bulb.



2,449,656
PROCESS OF MINIMIZING THE PRODUCTION OF FOAM IN STEAM GENERATORS
Robert W. Kell, Oak Park, Ill., assignor to National Aluminate Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application November 3, 1943, Serial No. 508,864
5 Claims. (Cl. 252—321)

1. Process of minimizing the production of foam in and the priming of steam generators operating under superatmospheric pressures which comprises incorporating with a water therein containing an amount of total solids tending to produce foaming and priming, a quantity of a disulfonamide of a straight chain alkyl sulfonic acid containing more than 11 carbon atoms and a polyamine in sufficient amount to substantially inhibit priming and foaming, said sulfonamide not being appreciably soluble in water but capable of being dispersed in water and being substantially nonvolatile with steam.

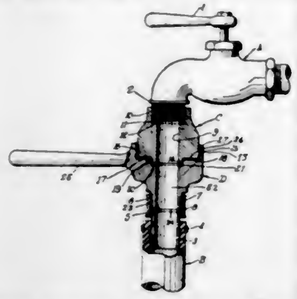
2,449,657
PISTON
Floyd F. Kishline, Kenosha, Wis., assignor to Nash-Kelvinator Corporation, Kenosha, Wis., a corporation of Maryland
Application June 19, 1942, Serial No. 447,636
19 Claims. (Cl. 309—14)



1. A piston comprising an outer cylindrical stamping, the side walls of said stamping being extruded inwardly of said stamping to form aligned apertures along a diameter of the piston, an inner stamping nested within said outer stamping and secured to said outer stamping, depending portions on said inner stamping spaced inwardly from said outer stamping and apertured

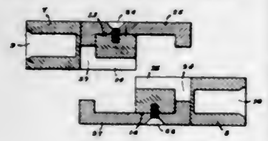
and flanged in alignment with the extruded and flanged portions of said outer stamping, and

bearing sleeves positioned in said aligned apertures at each end of said diameter.



2,449,658
DRYING TRAY
Pasquale La Macchia, Gilroy, Calif.
Application November 12, 1947, Serial No. 785,394
3 Claims. (Cl. 34—238)

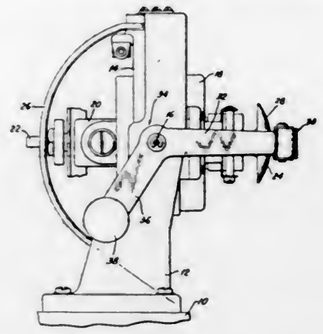
1. A drying-tray comprising, sheet metal side members of suitable length and width, each side member having its side edges turned inwardly upon itself and then outwardly in spaced and parallel relation to each other, bottom slats disposed in opposing slots so formed, spacing and tie members having a thickness greater than the first named inwardly turned portions of the side members seated at their ends upon the opposite sides of the opposed outwardly turned portions of the side members, and means binding the adjacent ends of the tie members and side members into one integral whole.



2,449,659
QUICK COUPLING FOR HOSE
Russell C. Lane, San Carlos, Calif.
Application August 7, 1945, Serial No. 609,383
1 Claim. (Cl. 285—175)

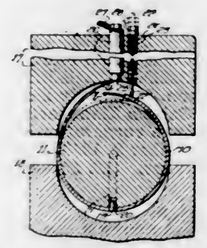
A quick coupling for a hose comprising a male member attachable to a water faucet and having outwardly extending pins and a cylindrical flange encircling a passage in the member and extending beyond an end of the member for providing an inner circular rim for a washer-receiving face, a washer encircling the flange and bearing against the face, a female member attachable to a hose and having a flange receiving the male member, the female flange having bayonet slots for receiving the pins, a radially and outwardly extending handle carried by the female member, said female member having a face for bearing against the washer, and having a cylindrical recess for receiving the male member flange, and a second washer placed in the female member

recess and bearing against the male member flange to cooperate with the first washer for making a stepped water-tight seal between the male and female members, both washers lying within a cylindrical area bounded by the pins.



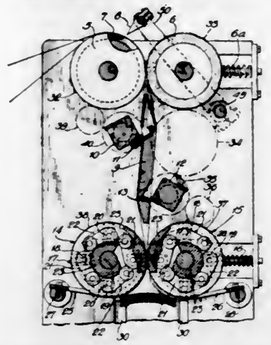
2,449,660
CABLE CONNECTOR
William M. Lawhorne, Primos, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 26, 1945, Serial No. 607,156
2 Claims. (Cl. 173—328)

1. In a device for connecting electric cables, a cylindrical terminal member, a recess extending axially inwardly of one end of said terminal member and adapted to receive the end of an electric cable, two longitudinal channels formed in the periphery of said terminal member diametrically opposite to one another and extending inwardly from the other end of said terminal member, a recess extending transversely of said terminal member and communicating with the inner end of said longitudinal channels, an arm affixed in one of said longitudinal channels and extending beyond the end of said terminal member, a lug on the free end of said arm, said lug projecting radially inwardly of said terminal member, and a resilient insulating sleeve slidably fitted and frictionally held on said terminal member.



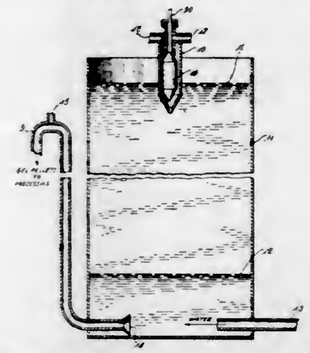
2,449,661
MAGNETIC LEVELING DEVICE FOR GYROSCOPIC ROTORS
Ward Leathers and George S. Di Monico, Brooklyn, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 29, 1945, Serial No. 638,397
2 Claims. (Cl. 74—5)

1. The combination with a freely suspended gyroscopic rotor, of means for normally urging the rotor to a position wherein its rotational axis is substantially horizontal, said means comprising a pendulously supported member, means pivotally supporting said member from the horizontal plane of the gyroscopic rotor axis, said member having balanced effective masses on each side of the vertical plane of its suspension the resultant center of gravity of which is below said plane, a mass of non-magnetic metal mounted on the rotor of the gyroscope and rotatable therewith, and a permanent magnet mounted on said pendulously supported member and forming an increment of one of said balanced masses, said magnet having a pole cooperating with said mass



of non-magnetic metal and the magnetic axis of said pole being normally maintained coincident with said horizontal plane of the gyroscopic rotor axis, said mass of non-magnetic metal presenting to said pole a convex surface of a radius of curvature less than the distance from the axis of pivotal support for the pendulous member to the cooperating pole surface of the magnet whereby progressive displacements of said magnet from said horizontal plane will effect corresponding decrease in the strength of the magnetic field applied to said non-magnetic mass of metal.

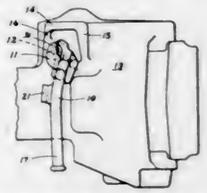
2,449,662
JOURNAL BEARING SLEEVE
Stanley R. Leeson, Dallas, Tex.
Application February 12, 1945, Serial No. 577,542
5 Claims. (Cl. 308—237)



1. As a new article of manufacture, a journal bearing comprising a hardened metal strip of predetermined dimensions, formed into a sleeve about a journal and having step cut ends secured in overlapped relationship, whose combined thickness is equal to that of said strip, the shoulder adjacent one end being spaced from the opposite end of said strip to define an oil sump longitudinally of said sleeve.

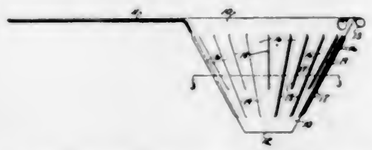
2,449,663
INTERFOLDING
Nicholas Marcalus, West Englewood, N. J.
Continuation of application Serial No. 423,291, December 17, 1941. This application September 28, 1946, Serial No. 700,129
14 Claims. (Cl. 270—39)

1. An interfolding machine comprising rollers adapted to advance a twin web, feed means for separately partially severing each web, a pair of interfolding rollers receiving such partially severed twin web both provided with nipper jaws and movably mounted tucker blades, and with rockshafts to effect the rocking motion of the movable jaws and the blades respectively, said rollers being circumferentially grooved, and said blades and nipper jaws being both notched in registry with such grooves, and oscillating presser fingers adapted to enter the annular space provided by said registering grooves and notches for removing the webs from said nipper jaws.



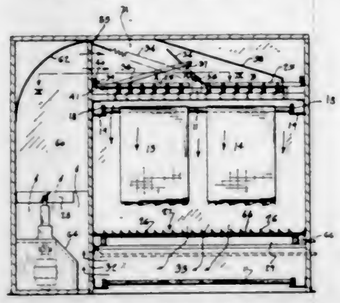
2,449,664
PREPARATION OF SPHEROIDAL SILICA-ALUMINA GEL PARTICLES
Milton M. Marisic, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application April 19, 1944, Serial No. 531,815
1 Claim. (Cl. 252—317)

A process for preparing spheroidal particles of silica-alumina hydrogel having a high solids concentration which comprises mixing sodium silicate solution containing about 212 grams silicon dioxide per liter and sodium aluminate solution containing about 23.6 grams aluminum oxide per liter in a volume ratio of 8000 parts silicate so-



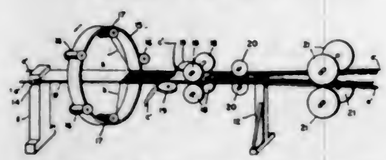
lution to 5440 parts aluminate solution, mixing the resultant silicate-aluminate solution while agitating with an amount of acid giving a resultant pH of about 6.0, introducing the so formed hydrosol into a body of oil wherein it separates into spheroidal globules of hydrosol and maintaining said globules in said oil until they set to firm hydrogel spheroids.

2,449,665
UNCOUPLING MECHANISM
William J. Metzger, East Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a corporation of Ohio
Application January 3, 1945, Serial No. 571,134
7 Claims. (Cl. 213—146)



1. An operating handle for the rotary uncoupling mechanism of a car coupler, said handle, described in relation to its normal position when the coupler is locked, comprising an approximately vertical gripping portion terminating at its upper end in an open link portion for engagement with the eye of the uncoupling mechanism rotor, said link portion having a generally U-shaped end arranged to embrace one side of the eye with the base of the U toward the coupler, and said U-shaped end having a projecting portion at the lower corner of the base of the U for engagement with a portion of the eye of the uncoupling mechanism to maintain the gripping portion spaced from the side of the coupler, an outwardly extending portion of the U-shaped end adapted to coact with the coupler mechanism in limiting forward pivoting of the handle about a vertical axis.

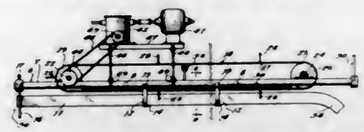
2,449,666
CULINARY STRAINER FOR PURÉEING FOOD
Nicholas Moseley, Sandy Hook, Conn.
Application January 11, 1945, Serial No. 572,376
6 Claims. (Cl. 146—172)



1. A culinary strainer constructed and arranged for puréeing or saucing food, and including a hollow conical body slitted substantially longitudinally to divide the said body into a plurality of panels, the said panels being transversely biased in a direction substantially circumferentially of the body to provide an egress-passage between the leading-edge of one of said panels and the trailing-edge of the next-succeeding panel, and the said egress-passage being directed in a generally-circumferential direction.

2,449,667
DRYING MACHINE
Ralph C. Parkes, Glenside, Pa.
Application March 14, 1946, Serial No. 654,376
5 Claims. (Cl. 34—222)

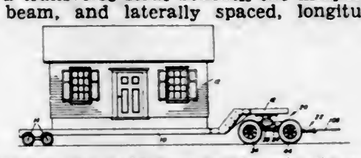
1. The combination with a drying machine including a structure defining a drying chamber adapted to receive two separate materials to be dried simultaneously, a wall structure defining a compartment having an inlet for admitting a fluid-drying medium, there being a first set of passages leading from said compartment to said chamber for directing a portion of said drying medium towards one of said materials, and a second set of passages for directing another portion of said drying medium towards the other of said materials, and means for delivering a fluid-drying medium under pressure to said compartment, there being exhaust openings leading from said chamber, of control means for regulating the flow of said drying medium to said material, said control means including a first set of shutters for obstructing or non-obstructing said first set of passages, a baffle connected to, and movable jointly with said first set of shutters, means for jointly actuating said first set of shutters and said baffle, said baffle being so arranged that when said first set of shutters are moved towards their non-obstructing position said baffle moves towards a position in which it partly obstructs the flow of said fluid-drying medium from said inlet to said second set of passages and vice versa, and means for actuating said second set of shutters towards their obstructing or non-obstructing positions independently of said first set of shutters and said baffle.



2,449,668
METHOD OF AND APPARATUS FOR MAKING BRUSHES
Ruben O. Peterson, University Heights, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application November 9, 1943, Serial No. 509,585
9 Claims. (Cl. 300—21)

1. In a method of making a brush element of the character described, the steps which consist in winding the brush material in the form of one or more strands around a mandrel, relatively moving the latter axially while the material is

being wound thereon, preliminarily confining and binding such wound material exteriorly of said mandrel along a line thereon parallel with such direction of movement, then severing such wound material along a line spaced from such first-mentioned line, removing the material thus preliminarily bound from said mandrel and finally completing the binding of such wound material along such line.

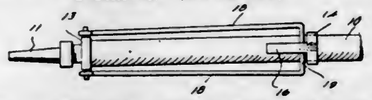


2,449,669
GARMENT CONVEYER
Alfred J. Pohlers, Joliet, Ill.
Application June 22, 1946, Serial No. 678,621
3 Claims. (Cl. 198—168)

3. In a portable garment conveyor adapted to be angularly positioned as a complete unit within a building for transferring garments mounted upon wire garment hangers from one floor level to an upper floor level, a pair of side frame members arranged in spaced parallel relation, transverse frame members secured to said side frame members, a driving shaft journaled on one end of said side frame members, a driven shaft journaled on the other end of said side frame members, sprockets mounted on said driving and driven shafts and disposed between said side frame members, an endless chain mounted on said sprockets, pusher members mounted at spaced intervals along said chain, a supporting bar secured to one of said side frame members and disposed directly below said chain to receive the hook portion of wire garment hangers, said pusher members being bifurcated at their outer ends to straddle said supporting bar, a guide plate secured to said transverse frame members in spaced parallel alignment above said supporting bar to engage the lower flight of said chain against upward movement relative to said supporting bar, an electric motor supported on said side frame members, a power transmission means connecting said motor to said driving shaft, each of said pusher members being recessed to provide a flat front face and an inverted U-shaped shoulder to receive and prevent upward displacement of the hook portion of a garment hanger from said supporting bar, the front face of each of said pusher members during movement upwardly along an inclined plane being disposed in substantially a vertical plane, and stop means provided on said supporting bar to engage the hook portion of a garment hanger, said stop means being disposed adjacent the lower end of the upwardly moving flight of said chain and in the path of movement of the pusher members.

2,449,670
HOUSE MOVING DOLLY
John Rapp, Rapid City, S. Dak.
Application July 8, 1947, Serial No. 759,500
1 Claim. (Cl. 280—116)

In a trailer, a wheeled truck pivotally supporting the front end of a wheeled trailer, said truck including a longitudinal beam, front and rear axles secured transversely beneath said beam and a swiveling connection carried intermediate said beam and secured to the front end of a trailer, reinforcing rods secured to said rear axle and to said beam forwardly of said swiveling connection, a transverse strut beneath the midpoint of said beam, and laterally spaced, longitudinal



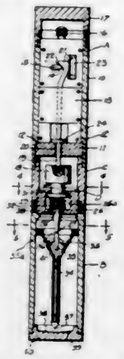
trusses engaging said strut and terminally secured to the upper ends of said beam.

2,449,671
PYRETHRUM EXTRACT AND PROPELLANT SOLUTION CONTAINING IT
William W. Rhodes, Westtown, Pa., assignor to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application July 30, 1943, Serial No. 496,837
5 Claims. (Cl. 167—24)

1. An extract consisting of a fluorinated solvent from the class consisting of $CHClF_2$ and C_2HClF_4 the boiling point of which is −10.2° C. and the parts of pyrethrum flowers soluble therein.

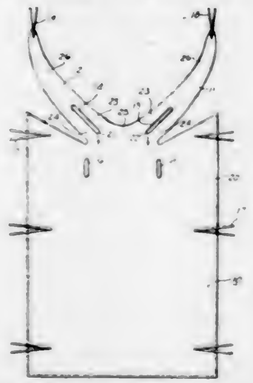
4. A propellant solution substantially free from green coloring matter whose essential ingredients are a fluoro-chloro derivative of an aliphatic hydrocarbon of the group consisting of methane and ethane, gaseous at atmospheric temperature and pressure, only those parts of pyrethrum flowers soluble in a solvent of the group consisting of $CHClF_2$ and C_2HClF_4 which has a boiling point of −10.2° C. and as a minor constituent sesame oil.

2,449,672
SAND BLAST NOZZLE CONTROL
William A. Rich, Leipsic, Ohio
Application May 27, 1947, Serial No. 750,660
3 Claims. (Cl. 51—11)



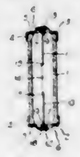
1. In combination with a hose and a nozzle, means for controlling the movement of the nozzle, comprising a swivel fixed to the hose adjacent the nozzle, a clamp fixed to the hose rearwardly of the swivel, and means for resiliently joining the swivel and the clamp, whereby the hose may be flexed between the swivel and the clamp.

2,449,673
EXTRACTION AND ISOLATION OF DIGITOXIN
Harry Rosen, Drexel Hill, Pa., assignor to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 20, 1946, Serial No. 691,873
20 Claims. (Cl. 260—210)



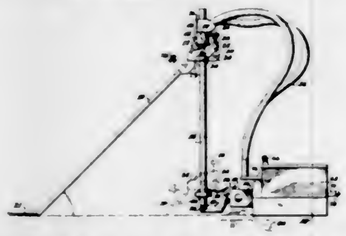
1. In a process for the extraction and isolation of substantially pure crystalline digitoxin from crude sources, the steps comprising extracting digitalis leaves with a mixture comprising a major amount of a lower alcohol and a minor amount of water, in which mixture digitoxin is soluble, treating the resulting liquid extract containing dissolved digitoxin with a tannin- and extractive-precipitant in a concentration sufficient to precipitate tannins, ballast and vegetative extractive materials but insufficient to precipitate digitoxin, removing the precipitated materials and excess precipitant, and recovering substantially pure crystalline digitoxin from the treated liquid.

2,449,674
INCLINATION INDICATING DEVICE
Fred H. Schmidt, Dallas, Tex., assignor, by direct and mesne assignments, to Eastman Oil Well Survey Company, Denver, Colo., a corporation of Delaware
Application July 12, 1945, Serial No. 604,653
7 Claims. (Cl. 33—205.5)



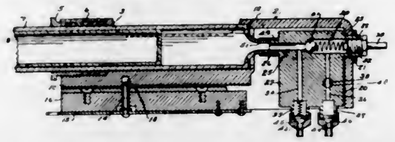
1. An inclination indicating device including, a casing adapted to be lowered through a well bore, a record disk mounted in the lower portion of the casing, a longitudinally movable marking element above the disk and adapted to move downwardly into engagement therewith to mark the same, means for mounting said element to undergo universal movement within the casing whereby its position relative to the center of the disk is controlled by gravity, a permanent magnet mounted to undergo longitudinal movement within the casing and adapted to act upon the marking element for normally maintaining the same in a raised position spaced above the disk, and means for imparting movement to said magnet to remove the marking element from the influence thereof and thereby allow said element to drop by gravity into engagement with the disk to mark the same.

2,449,675
BLANKET WRAPPER
Lawrence V. Schowalter, Cleveland, Ohio
Application June 27, 1947, Serial No. 757,535
4 Claims. (Cl. 128—134)



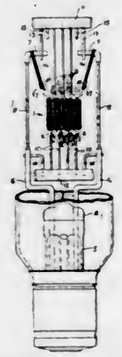
1. A baby wrapper blanket, comprising a blanket body having a first and second loopable cross strap member, each cross strap member having an arm slit therethrough, said first cross strap extending outwardly to one side of the blanket, said first cross strap having an end, a slit in said blanket body near a side thereof opposite the side direction in which the first cross strap extends, the first cross strap end being loopable under the blanket to enwrap the baby and extend through said slit in the blanket body opposite the first cross strap, said second cross strap extending outwardly to the side opposite from the first cross strap, said second cross strap having an end, a slit in said blanket body near a side thereof opposite the first slit, the second cross strap end being loopable under the blanket to enwrap the baby and extend through said opposite side slit.

2,449,676
METHOD OF MANUFACTURING ELECTRIC INCANDESCENT LAMPS
August W. Seitz, Euclid, Ohio, assignor to General Electric Company, a corporation of New York
Application October 1, 1947, Serial No. 777,337
5 Claims. (Cl. 316—19)



1. The method of manufacturing an electric incandescent lamp which comprises sealing an apertured metal end cap to one end of a double-ended glass envelope, fastening a lead-in conductor to another metal end cap to project from the inner side thereof, introducing an extended lead-in conductor through the apertured end cap and the associated envelope to project beyond the open end thereof, connecting the projecting ends of the lead-in conductors to the opposite ends of a filament, sealing the open end of the envelope to the said other end cap, and then exhausting the envelope through the aperture in the said apertured end cap and sealing the said aperture with metallic fusible material while the envelope is in exhausted condition.

2,449,677
WELDING ROD FEEDER
Paul H. Setzler, Hamilton, Ohio
Application April 30, 1946, Serial No. 666,065
16 Claims. (Cl. 219—8)

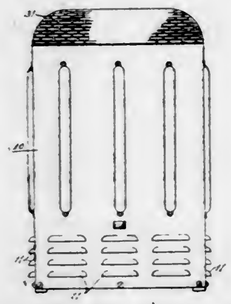


1. An apparatus for depositing a weld upon a work surface comprising: a base, a welding rod holder, said holder arranged to engage one end of a welding rod and sustain the rod at a fixed angle to the work surface, a substantially vertical post for guiding said holder relative to the work surface for feeding the rod downwardly by gravity, and an electrode operated post engaging device on the holder for regulating the descent of the holder by disengagement with the post as the rod is deposited upon the work surface.

2,449,678
CONTROL SYRINGE
Lester B. Stallcup, Phoenix, Ariz.
Application June 6, 1946, Serial No. 674,860
3 Claims. (Cl. 128—218)

3. Apparatus for intravenous administration of anesthetic including in combination with a hypodermic syringe provided with a cylindrical barrel, a scale thereon and an axial stem, a case having means for attachment to an operating chair, a horizontal bore adapted to receive said hypodermic syringe barrel, a gland packing adapted to secure the inner end of said syringe barrel operable on the inner end of said case, a scale viewing window in the upper side thereof, and an annular shoulder to receive the outer end of said syringe barrel; a valve block retained in the outer end of said case having a horizontal bore alined with said syringe stem, and connected therewith, an outwardly opening check valve therein, a tube nipple at the outer end of said bore, an angularly disposed channel connecting with said axial bore between said syringe and the check valve therein leading to a tube nipple on the outer face of said block having an inwardly opening check valve therein, an angularly disposed channel thru said block connecting to said axial bore outward from said check valve therein and leading outward thru said block to its lower edge face and to a tube nipple having an inwardly opening check valve, and a manually operable plug valve operable in said channel between said check valve and its juncture with said axial bore.

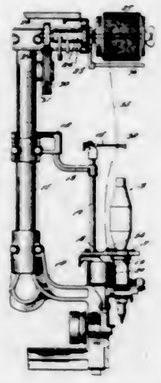
2,449,679
LAMP FILAMENT SUPPORT AND CONNECTION
Irving H. Van Horn, East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application November 30, 1944, Serial No. 565,825
5 Claims. (Cl. 176—39)



1. An electric lamp comprising a mount including supporting structure and a coiled filament, and a spud for tensioning coil convolutions of said filament attached to said supporting structure and provided with screw threads in screw mesh and frictional engagement with other coil convolutions of said filament, the said screw mesh frictional interengagement providing the sole electrical and mechanical connection of the spud to the filament.

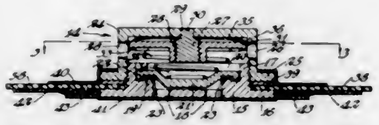
2,449,680
VEHICLE TOW BAR
Peter T. Wak, Jr., and Arthur J. Carpenter, Lake Orion, Mich.
Application January 31, 1947, Serial No. 725,548
2 Claims. (Cl. 280—47)

1. A vehicle tow bar comprising an elongated handle, a pair of arms extending from an end of said handle and having spaced vehicle-engaging portions, at least one of said arms being pivoted to swing to and from the other arm to engage the arms with and disengage them from a vehicle, a member slidable on the handle, a control element for the pivotal arm projecting from the pivotal end of such arm, means on said sliding member for camming said element away from the handle responsive to sliding of said member toward the arms, whereby the pivotal arm is swung toward the companion arm, and a coiled spring extending from the pivotal arm to the sliding member and urging the sliding member along the handle toward the arms.



2,449,681
AIR PURIFIER
Ray Wilson, Chicago, Ill., assignor to Richard R. Cook, Chicago, Ill.
Application July 23, 1947, Serial No. 762,966
2 Claims. (Cl. 21—74)

1. An air purifier comprising a closed cabinet, a plurality of openings adjacent the base of said cabinet adapted to permit the entry of air into said cabinet, a pair of ultraviolet lamps mounted within said cabinet above said openings, a plurality of flat metallic parallel plates mounted within said cabinet above said lamps and positioned transversely thereto, said plates electrically connected to said cabinet, a plurality of flat metallic parallel plates slidably and insulatedly mounted within said first plates, said second plates connected to an electrical source of supply

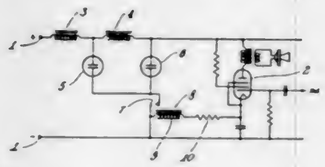


adapted to maintain a high negative charge on said second plates with respect to said first plates, an electric fan mounted within said cabinet above said plates, said electric fan and said ultraviolet lamps connected to a suitable electrical source of supply, and a plurality of openings adjacent the top of said cabinet adapted to permit the exit of air from said cabinet, said electric fan adapted to draw air through said plurality of openings adjacent the base of said cabinet, into said cabinet past said ultraviolet lamps, through said parallel plates and out said plurality of openings adjacent the top of said cabinet for purification of said air.

2,449,682
YARN WINDER
Albert E. Winslow, Norwich, Conn., assignor, by mesne assignments, to Universal Winding Company, Cranston, R. I., a corporation of Massachusetts
Original application September 11, 1943, Serial No. 501,963, now Patent No. 2,385,046, dated September 18, 1945. Divided and this application December 9, 1944, Serial No. 567,389
3 Claims. (Cl. 242—35.5)

1. In a yarn handling machine, a frame means to support a plurality of yarn packages in said frame with their axes parallel and extending toward the front of the machine whereby a package may be withdrawn axially toward the operator, said package support being rotatable, a pulley for each package support to rotate the same, a belt extending along said frame the back outer surface of which engages several of said pulleys to serve as a common means to drive the same.

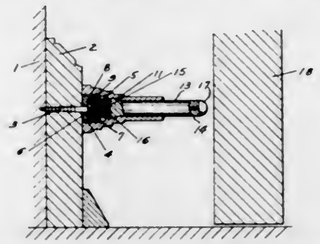
2,449,683
DIFFERENTIAL PRESSURE VALVE
John D. Akerman and Mihkel Schonberg, Minneapolis, Minn.
Application April 16, 1943, Serial No. 483,292
1 Claim. (Cl. 137—53)



A differential pressure valve, comprising a casing, a valve seat in said casing, a valve head movable into and out of engagement with said seat and disposed in said casing, a plug in said casing having a portion exposed outwardly thereof, said plug being rotatable relative to said casing and having a threaded portion extending into said casing, a spring cap threaded on said plug, a spring interposed between said cap and said valve head, a cap retainer in said casing having yieldable frictional engagement with said cap to retain the latter against jarring and rotation about said plug, and said cap retainer comprising a spring finger supported by said casing and said frictional engagement being provided by a yielding contact between said cap and spring finger.

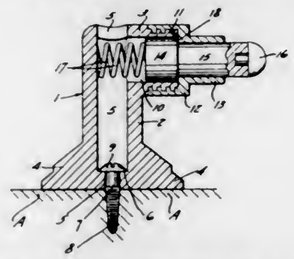
2,449,684
AQUEOUS POLYVINYL CHLORIDE/POLYSTYRENE DISPERSIONS
Reginald George Robert Bacon, Harold Taylor, and Leonard Wood, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application February 12, 1945, Serial No. 577,584. In Great Britain January 12, 1944
1 Claim. (Cl. 260—29.6)

Aqueous polymer dispersions suitable for use in the production of articles by dipping which comprise, in aqueous dispersion, polyvinyl chloride, from 10 to 100 parts by weight of polystyrene of molecular weight from 20,000 to 120,000 per 100 parts by weight of polyvinyl chloride, and a plasticiser compatible with said polymer mixture.



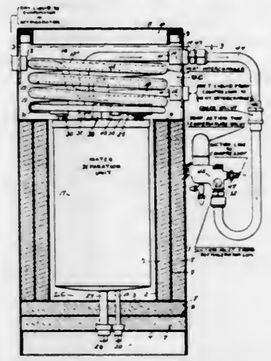
2,449,685
RADIO RECEIVER OR AMPLIFIER ARRANGED TO BE FED FROM DIRECT CURRENT MAINS
Johannes Augustinus Josephus Bouman, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 9, 1946, Serial No. 668,425
In the Netherlands August 28, 1940
3 Claims. (Cl. 250—27)

1. An electronic circuit arrangement for operation from a direct current supply, comprising a filter having the input thereof connected to said supply and comprising a unipolar electrolytic capacitor, an electron discharge tube having an anode and a cathode and being connected across the output of said filter, a relay having an exciting winding and contactors associated therewith to be closed when said relay is energized, and means connecting said contactors to said electrolytic capacitor to connect same into said circuit arrangement, said exciting winding being interposed in the anode-cathode circuit of said electron discharge tube whereby said relay is energized to connect said capacitor into said circuit arrangement only when said filter is connected to said supply with correct polarity.



2,449,686
DOOR STOP
Steven S. Brinda, Minneapolis, Minn.
Application August 19, 1946, Serial No. 691,444
2 Claims. (Cl. 16—85)

2. In a device of the class described, an anchoring plug having an axial opening therethrough, said opening being enlarged at one end to form a recess, screw means in the bottom of said recess and through said opening for securing said anchoring plug to a wall, a post having an axial passage therethrough, said passage being enlarged adjacent its inner end to provide an internal shoulder, means in the enlarged end of said post for removably securing said post to said anchoring plug, a plunger in said axial pas-



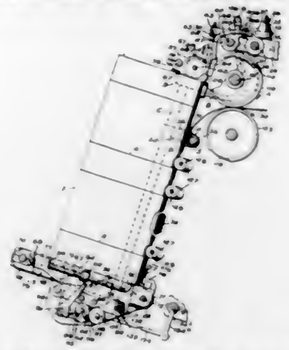
sage projecting outwardly from said plug, a circumferential flange on said plunger adapted to engage the internal shoulder of said post and limit the outward movement of said plunger, a coil spring having one end seated in the recess of said anchoring plug and having its opposite end in contact with the inner end of said plunger and tending to bias said plunger in an outward direction, and a resilient cushioning pad on the outer end of said plunger.

2,449,687
DOOR STOP
Steven S. Brinda, Minneapolis, Minn.
Application November 20, 1946, Serial No. 711,024
1 Claim. (Cl. 16—85)

In a device of the class described, a post having an axial passage therethrough, said passage being reduced adjacent its base to provide a shoulder, an offset arm adjacent the upper edge of said post, an axial passage through said arm intercepting the passage in said post, a removable sleeve secured to said arm and having a reduced outwardly extended end portion, a head mounted for reciprocal movements in the passage of said arm, a plunger secured to said head and mounted for reciprocal movements in the reduced end portion of said sleeve and having its outer end projecting outwardly therefrom, and spring means biasing said head and plunger in an outward direction.

2,449,688
DEHYDRATOR FOR REFRIGERATING SYSTEMS
Clinton C. Brinkoeter, San Antonio, Tex., assignor to Ed Friedrich, Inc., San Antonio, Tex., a corporation of Texas
Application November 27, 1944, Serial No. 565,396
8 Claims. (Cl. 62—115)

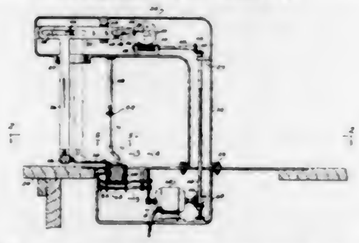
1. A dehydrator for refrigerating systems containing a refrigerant in a refrigerating circuit, said dehydrator including: a casing; a water separation unit in said casing; a heat interchanger in said casing; operative connections between said heat interchanger and said water separation unit, by virtue of which the refrigerant to be dehydrated is first passed through one part of said heat interchanger, then through said water separation unit, and then through another part of said heat interchanger; and means whereby said heat interchanger may have its terminals operatively connected in the refrigerant circuit of the refrigerating system.



2,449,689
LUBRICANT
Paul H. Carnell, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application December 3, 1945, Serial No. 632,614
6 Claims. (Cl. 252—28)

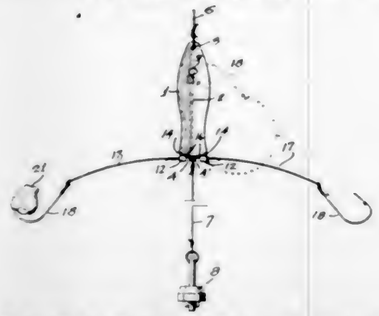
4. A composition for the lubrication of valves used in service where an acid selected from the group consisting of HCl and HF is in process consisting of a chlorinated paraffin wax prepared from a paraffin wax having a melting point between approximately 125° and 130° F. and containing about 42% by weight of chlorine, and sufficient solid thickening agent selected from the group consisting of graphite and asbestos to impart a desired consistency to the lubricant composition to effectively seal valves lubricated with said composition against leakage when used in said service.

2,449,690
MECHANISM FOR FEEDING SHEETS OF STIFF FIBROUS MATERIAL
Fred H. Chapman, Pepperell, Mass., assignor to The International Paper Box Machine Company, Nashua, N. H., a corporation of New Hampshire
Application August 21, 1945, Serial No. 611,756
30 Claims. (Cl. 271—26)



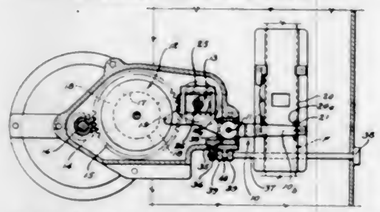
7. Blank-feeding mechanism having means for supporting a stack of flat blanks of stiff material

inclined to the verttical in proximity to mechanism for forwarding individual blanks, movable vacuum mechanism having means operable upon application of suction to engage the face of the end portion of the foremost blank and operable upon application of suction to arch the same away from the next adjacent blank, means for actuating said vacuum mechanism to deflect and present the end of said foremost blank to said forwarding mechanism, a reciprocating stop member, and means for actuating the same to insert it in the arch of the foremost blank in contact with the face of the next adjacent blank and



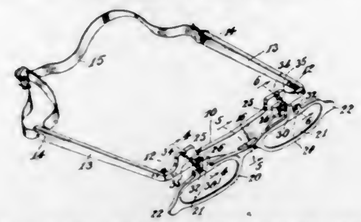
prevent deflection of the next adjacent blank from the stack, feeding means for advancing the upper ends of the foremost blanks of the stack comprising a shaft having mounted thereon rotatable spaced toothed cylindrical members engaging the upper ends of said blanks at opposite sides of the vacuum mechanism means for rotating said shaft, and frictional means on said shaft engaging said rotatable cylindrical members operable to advance and position the blank next to the deflected blank in a position properly to be engaged by the next operation of said vacuum mechanism.

2,449,691
REWEAVING MACHINE
Mildred T. Deal, Cleveland, Ohio
Application October 10, 1947, Serial No. 779,055
11 Claims. (Cl. 139—33.5)



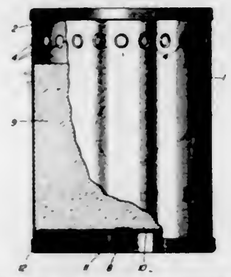
1. A re-weaving machine, comprising in combination, a table member supporting a piece of fabric to be rewoven, an oscillating member mounted on the table member and capable of intermittently raising and lowering the said piece of fabric, a comb member mounted on the table member and supporting a patch, the ravelled ends of which are to be woven into the said piece of fabric, and a latch-type needle mounted on the table member movable in and out of the said oscillated fabric and engageable with a thread of the patch and capable of drawing it through the fabric.

2,449,692
SPOON LEADER
Bruno E. Eichendorff, San Francisco, Calif.
Application February 26, 1946, Serial No. 650,235
2 Claims. (Cl. 43—28)



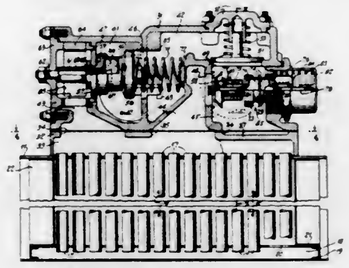
1. A spoon leader comprising an elongated polished plate apertured at both ends and bent along a median line longitudinally to form reflective faces and having lateral tubular members formed therefrom on opposite sides of one end of said plate and also having notches in opposite edges of said plate and immediately adjacent said tubular members.

2,449,693
KINETOGRAPH MOVEMENT
Henry N. Fairbanks, Beverly Hills, Calif., assignor to Mitchell Camera Corporation, West Hollywood, Calif., a corporation of Delaware
Application September 24, 1945, Serial No. 618,159
8 Claims. (Cl. 88—18.4)



1. In kinetograph movements of the type which embody a film guide, a film engaging and moving lever which lies in a plane substantially parallel to the plane of the film guide and which extends in length transversely of the length of the film guide, the lever being pivoted for swinging film-moving motion in said parallel plane and also in a plane at substantially right angles thereto to engage and disengage the lever with the film, and means for moving the lever in the last mentioned plane; the improvement which comprises the combination of a lever actuating unit of the nature of a cam mounted on a fixed axis and acting to swingingly oscillate the lever in its film-moving motion in said parallel plane, the engagement of the cam with the lever being such that the lever is adjustably movable lengthwise with relation to the cam, an adjustably movable pivotal mounting for the lever comprising a pivot element permitting swinging motion of the lever about two transverse axes which are fixed with relation to the lever, and a pivot carrying member which is adjustably shiftable toward and away from the cam axis, and means for adjustably setting the position of the carrying member to shift the lever and thereby adjust the point of cam engagement on the lever.

2,449,694
EYEGLASS
Edward Froelich, New York, N. Y.
Application November 9, 1945, Serial No. 627,656
1 Claim. (Cl. 2—14)

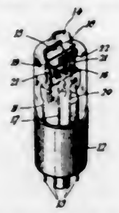


In an eyeglass having a rigid bridge piece with means for holding the bridge piece at the front portion of the head of the wearer, and having a bridge to rest on the nose of the wearer, a pair of spaced forwardly extending abutments on the bridge piece, a lens frame, a pair of spaced pintle hinges connecting the lens frame with the bridge piece, said pintles being in alignment with each other and substantially parallel with the bridge piece and the lens frame, and a pair of spaced projections on the lens frame resting on said abutments in the non-use position of the lens frame, the combination of a pair of spaced upwardly extending pairs of projections on the bridge piece, each latter pair above each abutment, and each pair having a horizontal bar, a pair of horizontal bars on said lens frame with each bar adjacent one of said lens frame projections and supported thereby, and each bar substantially parallel with one of said bridge piece bars, a member at the front of the bridge piece centrally of the same against which the lens frame abuts when in use position, and a pair of coiled springs, each having one end connected with a bridge piece bar and the other end with a lens frame bar, disposed close to each hinge, the longitudinal axis of each spring being disposed below the pintle axis when the lens frame is in use position, and being disposed above the pintle axis when holding the lens frame in non-use position, whereby the lens frame is held by the spring against the bridge piece when in non-use position, and held by the spring against the bridge piece when in use position.

2,449,695
FUMIGATING PACKAGE
Arthur L. Galloway, Louisville, Ky., assignor to Tobacco By-Products and Chemical Corporation, Louisville, Ky., a corporation of Delaware
Application September 13, 1946, Serial No. 696,770
3 Claims. (Cl. 21—108)

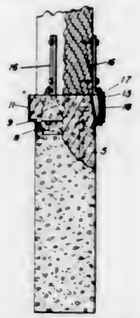
1. A fumigating package comprising a container, a body of porous, gas traversable combustible material capable when ignited of burning and of liberating fumigating gases disposed within the container, means adjacent one surface of said body for releasing gas from the container and means adjacent another surface of said body for igniting the same said container, aside from said means for releasing gas, being gas tight.

2,449,696
OIL TEMPERATURE REGULATOR
Walter H. Geddes and Phillip W. Schanke, Dayton, Ohio, assignors to United Aircraft Products, Inc., Dayton, Ohio, a corporation of Ohio
Application December 14, 1943, Serial No. 514,300
7 Claims. (Cl. 257—2)



1. In a liquid temperature regulator for controlling the temperature of a liquid which is progressively heated and which circulates under pressure to and from the heat generating means, said regulator being arranged for the passage of the liquid therethrough and having a manifold head formed with an inlet and an outlet; means in the regulator defining a liquid cooling passageway communicating at its opposite ends with said inlet and said outlet; a first conduit in said head leading from said inlet to said outlet in by-passing relation to said cooling passageway; a second conduit leading from said inlet to said outlet in by-passing relation to said cooling passageway and in continuous communication with said passageway; first and second valves in said first and second conduits respectively, each settable to effective and ineffective positions, in the former of which it blocks by-passing of the liquid; independently operable thermal means acting in response to rising liquid temperatures to move said first valve to effective position and then to move said second valve to effective position, and a check valve between said outlet and the terminals of said second conduit and said cooling passageway preventing the application of back pressure thereto from said outlet.

2,449,697
IONIZATION CHAMBERS, GEIGER-MÜLLER TUBES, AND THE LIKE
Arnold Graves, Surbiton, and Travis Jack Dawes, Bridgefield, Farnham, England, assignors to Alltools, Limited, Brentford, Middlesex, England, a company of Great Britain
Application March 19, 1946, Serial No. 655,461
In Great Britain April 12, 1945
1 Claim. (Cl. 250—27.5)



An ionisation counter tube, for use in estimating and detecting alpha and beta particles and gamma radiation, comprising a single ionisation chamber having an outer envelope and containing a filling of inert gas, a press sealed into the envelope, and two electrodes only mounted on the press, said electrodes being a cathode in the form of a

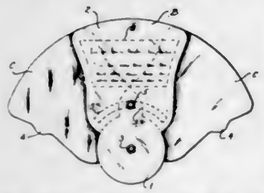
segment of a cylinder disposed with its concave surface facing a wall of the envelope and an anode

coaxial with said cathode and said cathode being substantially insensitive to photons of wavelength adjacent the visible portion of the spectrum.

2,449,698
POLE BUTT
Leonard Hartley, Mount Shasta, Calif.
Application August 17, 1945, Serial No. 610,892
2 Claims. (Cl. 72—84)

2. A reinforced concrete pole-butt having a pair of coaxially arranged rings positioned one above the other and at the upper end thereof, said rings being connected by a flange forming a ledge underlying a portion of said concrete, means for securing the lower end of a pole to said rings, said means including bolts secured to said pole and positioned adjacent the upper of said rings and engaging the lower surface of said flange, and a plurality of partitions secured to the upper of said rings and extending to and engaging with said flange to form bolt-receiving spaces.

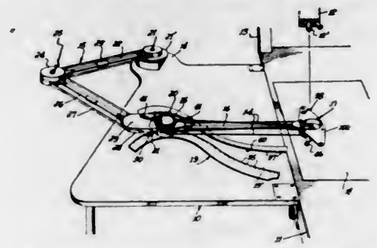
2,449,699
TOURIST FILM GUIDE
John M. Higgins, Boulder City, Nev.
Application May 11, 1943, Serial No. 486,550
1 Claim. (Cl. 40—28)



In a film viewing casing having a pair of juxtapositioned eye pieces with magnifying lenses therein and an outwardly extending base web, rectangular shape in plan with a continuous vertically disposed peripheral flange around the outer edge, the combination, which comprises, a rectangular shaped frame comprising a base with a vertically disposed peripheral flange positioned inside of the flange of the casing and having an outer recess to receive the said flange of the casing, said frame having an opening through the base thereof and a longitudinally extending slot to receive a film or the like, a transversely disposed screw extending across the frame midway between the ends thereof, a traveling nut threaded on said screw having comparatively thin bars extending at the sides parallel to the sides of the frame, said bars having guides on the ends thereof slidably mounted on opposed edges of the base at the ends of the opening therethrough, a longitudinally extending screw in one side of the frame, a plurality of traveling nuts on said longitudinally extending screw carrying comparatively thin transversely disposed bars with guides on the outer ends thereof slidable on the edge at the side of the base at the side of the opening therethrough, film actuating sprockets on a shaft transversely positioned in one end of the frame, and means manually rotating the said shaft and screws from the exterior of the frame.

2,449,700
FISH LURE
Irvin R. Hubbard, Beaver Dam, Wis., assignor, by decree of court, to Harriette E. Hubbard
Application August 9, 1943, Serial No. 497,987
5 Claims. (Cl. 43—46)

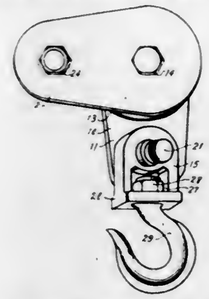
1. A fishing lure comprising an elongated body of buoyant material, the body having a front end face in a plane perpendicular to its length, said front face having a straight downwardly and rearwardly extending channel which is continued through the side of the body, and a hook having the shank portion embedded in the body and extending lengthwise thereof from the lower end of said channel upwardly and rearwardly through the opposite end of the body at substantially the longitudinal center of the body, said shank having an eye at the forward end.



2,449,701
FOLDING HAND FAN
Michael Imperial, University City, Mo., assignor to Skinner & Kennedy Stationery Company, St. Louis, Mo., a corporation of Missouri
Application February 7, 1946, Serial No. 645,982
1 Claim. (Cl. 230—269)

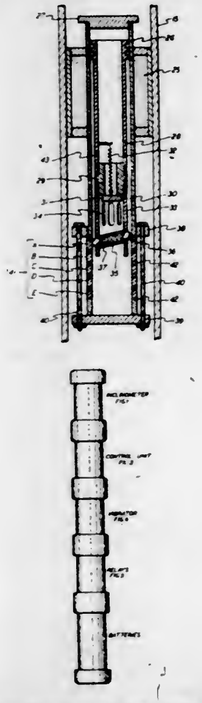
A folding hand fan comprising opposed flat front and back cover sections and two overlapped flat side sections interposed between said front and back cover sections, a single means for pivotally connecting all of said sections together at one end, whereby said sections are adapted to be swung one over another in their own planes into

substantially fully overlapped relation between said front and back cover sections and are adapted to be swung away from each other into spaced apart relation so as to extend beyond opposite side edges of said front and back cover sections, said back cover section having printed matter on the back face thereof, and a single means for permanently securing said opposed front and back cover sections together against relative pivotal movement and for preventing said side sections from swinging entirely clear of said opposite side edges of said cover sections, all of said sections being of substantially the same size and shape, whereby said front and back cover sections are adapted to provide at the front and back of the fan substantially complete coverage for said side sections in the fully overlapped position thereof and are also adapted to provide complete coverage at both the front and back of the fan for the space formed between said side sections in the spaced apart position thereof.



2,449,702
ANIMATING DEVICE
Ubbe E. Iwerks, Van Nuys, Calif., assignor to Walt Disney Productions, Burbank, Calif., a corporation of California
Application December 8, 1944, Serial No. 567,282
15 Claims. (Cl. 88—16)

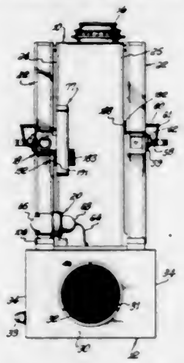
1. A device for regulatably controlling the movement of silhouettes, cutouts, models and other objects in the field of view of a motion picture camera comprising a movably mounted arm, one end of said arm being located in the field of view of a camera, the other end of said arm being located over a chart, a guide head rotatably mounted on the end of the arm adjacent the chart, an object head rotatably mounted on the arm at the other end for holding the object to be photographed and a connecting means between said heads whereby rotary movement of one is translated to the other, said chart having a line tracing the path of movement of the object to be photographed and having spaced indications thereon graduated to correspond with the number of frames of a motion picture film selected to reproduce the sequence of movement, and a guide pin on the guide head to be moved along said line tracing the path of movement in accordance with the spaced indications.



2,449,703
SNATCH BLOCK
Cloyd B. Johnson, Tulsa, Okla.
Application May 14, 1945, Serial No. 593,654
5 Claims. (Cl. 254—193)

1. A snatch block including a pair of side plates having a pulley journalled therebetween, a cross bolt passing transversely through the plates, a clevis journalled on the bolt between the plates, a nut fixed to one of the plates receiving one end of said bolt, the clevis having a reduced bore in which the bolt is slidable and an enlarged bore,

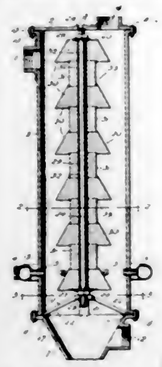
and means on the bolt disposed in the enlarged bore of the clevis for limiting the sliding movement of said bolt in the clevis.



2,449,704
INCLINOMETER
Philip Jones, Los Angeles, Calif.
Application June 26, 1944, Serial No. 542,056
11 Claims. (Cl. 33—205.5)

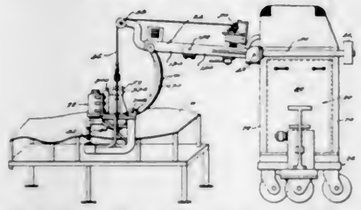
2. In an inclinometer having a pointed pendulum, a sliding table and electromagnetic means for driving said table against said point to produce a record of point position on a record element placed on said table: means for controlling the operation of said electromagnetic means, comprising: a sealed reservoir containing a liquid; a piston arranged to be raised by a solenoid and to subside slowly through said liquid by gravity; contact points arranged in the wall of

said reservoir and brush means carried by said piston and arranged to connect said contact points in pairs; a vibrator unit affording electrical contacts on acceleration thereof; an electric circuit including said vibrator unit, said solenoid and one pair of said contact points, whereby on the connecting of said points by said brush means said piston is retrieved and held in a relatively elevated position so long as said inclinometer is subject to acceleration, and a second electrical circuit arranged to energize said electromagnetic means and to produce said record when said inclinometer comes to rest and said piston subsides to bring said brush means into contact with a second pair of said contact points.



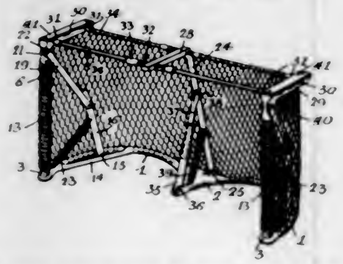
2,449,705
SOUND PICTURE MAGAZINE PROJECTOR OF THE CONTINUOUSLY MOVING FILM TYPE
Richard Jones, Burbank, Calif., assignor to Walt Disney Productions, Burbank, Calif., a corporation of California
Application November 14, 1944, Serial No. 563,381
16 Claims. (Cl. 88—16.2)

1. In a moving picture projector including a stationary housing and power means exposed on each side thereof, the combination of interchangeable self-contained film magazines each comprising a casing including a reel for film to be projected and a reel for projected film rotatably mounted in the casing, a drive sprocket mounted within the casing and a projection aperture adjacent thereto, a releasable connection between the drive sprocket and a source of power on one side of the housing, and a clamp having elements located one on each side of the housing adapted to hold one magazine on one side of the housing for a projecting operation and the other magazine on the other side for a rewinding operation.



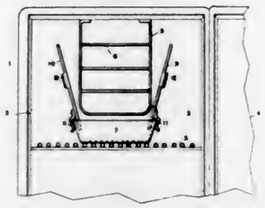
2,449,706
GALVANIC WATER PROCESSING APPARATUS
Theodore C. Jones, Louisville, Ky.
Application January 10, 1945, Serial No. 572,146
3 Claims. (Cl. 204—248)

1. In a water processing apparatus, a vertically elongated galvanic pile comprising vertically spaced frusto-conical positive electrodes entirely free from contact with each other and all having their smaller ends disposed upwardly, the peripheries of all of said positive electrodes being steeply inclined to shed any precipitate settling thereon, cyclindrical negative electrodes between said positive electrodes and of no greater diameter than the smaller upper ends of said positive electrodes, said positive and negative electrodes being axially alined vertically, and means extending



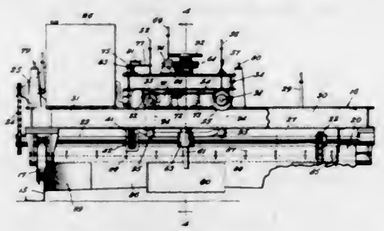
through said positive and negative electrodes and holding said positive electrodes in contact with said negative electrodes.

2,449,707
WELDING MECHANISM
Chester F. Leathers, Detroit, Mich.
Application July 17, 1944, Serial No. 545,322
2 Claims. Cl. 219—4)



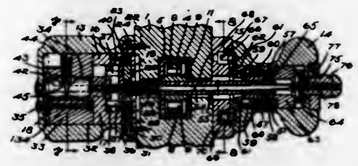
1. In a welding system, a portable welder, a hanger for mechanically supporting the welder, said hanger including bus-bar means through which power is delivered to the welder, means forming an adjustable supporting connection between the welder and the hanger, and flexible conductor means for electrically connecting the welder to the hanger.

2,449,708
HOCKEY GOAL
Leslie Bertrand Lindsay, Kirkland Lake, Ontario, Canada
Application February 14, 1947, Serial No. 728,562
6 Claims. (Cl. 273—127)



1. A goal comprising a base having two ends, a pair of posts at the ends thereof, each post including a lower section fixed to the base and an upper section articulated to the lower section, spring means maintaining the upper sections in alinement with the lower sections, and a net attached to said base and posts.

2,449,709
REFRIGERATOR DEFROSTING DEFLECTOR
James V. Mesite, Baltimore, Md.
Application January 16, 1948, Serial No. 2,776
5 Claims. (Cl. 62—1)



1. In a household refrigerator having a plurality of walls for enclosing a food storage space therein, an evaporator supported thereon from a top wall thereof; a shelf supported from the lateral walls thereof; a drip tray having a bottom and side walls supported on said shelf beneath the evaporator; a pair of shield elements one for each lateral surface of the evaporator, each comprising a substantially planar sheet having proximate the lower edge thereof and secured thereto a plurality of clip elements for attachment to the side walls of the drip tray, said clip elements having a base portion, an upstruck spacer portion, and a flange portion, whereby a channel is provided between the flange portion and the opposed portion of the shield surface for the reception of said walls of the drip tray.

2,449,710
CONCRETE SPREADING APPARATUS
Arthur E. Miller and George K. Viall, Milwaukee, and Rudolph F. Lindow, Wauwatosa, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 15, 1945, Serial No. 582,862
20 Claims. (Cl. 94—44)

1. In apparatus for spreading concrete deposited upon a road bed, a main frame traversable longitudinally along the road bed; a carriage mounted on said frame for movements transversely of the bed; means for reciprocating said carriage upon the frame; a spreading blade mounted by the carriage for movements about a vertical axis; means operable to rotate the blade about said axis during said transverse movements of the carriage; and means for controlling said rotating means whereby at the volition of the operator the blade may be either rotated or maintained in any determined angular relation to the carriage during the transverse movements of the latter.

2,449,711
DOOR LOCK
Joseph H. Milligan, Framingham, Mass.
Application May 24, 1945, Serial No. 595,510
11 Claims. (Cl. 70—215)
